

**“The turning point was in the year 2020,
a few had plenty, but as for the many,
they weren’t tasting any fruits of their labor,
there had been prophesied a coming of a savior.
20 years prior by the Roman Catholic calendar,
they must have calculated with the wrong algebra,
most of the meek were devastated roman scavengers,
nuclear war had turned the blue sky to lavender.”**

—from the Song “20-20 Vision”

(Lyrics by Capital D, released 2000)

FOREWORD BY MICHAEL HORNER

This book is extensive: it is about Reality. It is a privilege to write this foreword and a delight to do so. This is because I recognize here is an important book, both in general and specifically. Before leaving you to read the explicit content, let me explain why this is naturally so. We are the inheritors of categorized knowledge; therefore, we inherit a worldview that consists of parts strung together. With a fragmented view of Reality, science is separated from philosophy, nation-states go to war with each other, and the elements of civilization are fragmented within. However, the most critical separation is humanity from the planet which gave birth to us.

The Phoenix Hypothesis is almost unique in that it creates a holistic story across all disciplines and levels of detail and positions humanity as part of the living planet. It is accepted by thinking people that Reality is a unity and that wholeness cannot be grasped by studying the pieces. Reality evolves, and we are participants, not merely observers. The state of planet Earth and civilization are not in harmony with each other and the wider universe. Attempting to understand how we as individuals or citizens of planet Earth in this context seems impossible.

One man has had the courage, education, contacts, intellect, determination, and humility to take on the task of giving us an integrated view of modern Reality. In his first book, the author creates a story by combining knowledge from ancient and modern sources. He is as familiar with the essence of Hermetic wisdom as the content of whistleblowers' documents buried in libraries or deep in the web.

There is a story that *Christopher Wren* visited the site of St. Pauls Cathedral to encourage his workers. He spoke to three men asking what are you doing. The first answered, making bricks. The second one replied, constructing a wall. The last worker answered, building a church. Whether you are interested in the bricks, the walls, or the church overall, you will enjoy and learn from this book. You will find answers here if you are curious about who runs the planet, who runs civilization, and where it's all heading. You may not like the answers, but you will be able to follow and sometimes be amused by his logic. If you are a specialist, you will be able to see where your knowledge is nicely summarised so others can understand your work.

As *Christian* lived his life, people came into his orbit and influenced each other for a while until he moved on. Reading the book's flow, it seems powerful forces demanded this story should be told. He promises further publications. Meanwhile, absorbing this masterpiece will take dedication just to follow his delightful integration of wisdom applied to modern times. Read this book, adapt your world view and act accordingly.

—*Michael Horner*

Independent Researcher

INTRODUCTION

The Phoenix Hypothesis is my model of the current global situation. With this thesis, I do not claim an all-encompassing truth, which does not exist—at least, it vanished from our modern paradigm of perception. Therefore, I offer nothing more and nothing less than my perspective on reality as I have discerned it within the framework of my collected data. Furthermore, I will occasionally include personal thoughts and anecdotes. In these sections, the content becomes acutely subjective. This combination of experiences and research is constantly developing. Therefore, I might expand or partially reinterpret my thesis at a later stage. Research is always a continuous process, even though I am momentarily convinced I have reached a fundamental breakthrough in my understanding which is worth sharing.

The Phoenix Hypothesis primarily addresses individuals who have reached a progressive detachment from the System narrative. On the other hand, people who are entrenched in the mainstream perspective will possibly misjudge my representations as an insult to their intelligence. Thus, readers who have yet to notice that they are comprehensively lied to by politicians and the mass media, for example, on subjects like 9/11 or the corona pandemic, should slam the book shut now. Please put it in the waste paper bin and recycle it in a CO₂-friendly fashion. For those open-minded but new to the topic, I will add plenty of footnotes that give additional explanations and references regarding the source material.

Even some long-time followers of the truther movement¹ will be challenged by the Phoenix Hypothesis, as they tend to get stuck in their own dogmas. This assessment comes from self-reflection. In my process, I, too, had difficulties detaching myself from romantic but, in the end, naïve notions. Therefore, my current perspective will also grow and correct itself—it is inevitable.

The first version of the book was initially published in Germany. It was tailored for the local scene of alternative media and those looking for more profound explanations of why the world has become increasingly psychotic. Therefore, I explained a few details from a unique German perspective, for example, on subjects concerning mechanisms within the political establishment—but don't worry. First of all, you will soon understand that the underlying principles are not so exceptional at all. Most Western “democracies” are structured similarly—only the puppets and labels change. So if I describe a specific German situation, use it as an analogy and find an identical pattern in your country. Further, you could gain a different standpoint on what is happening in the heart of Europe.

The primary intention behind the hypothesis is to shift the focus on complex topics that are entirely underrepresented even in alternative media but are enormously important for assessing the overall picture of the global situation. I want to connect puzzle pieces and stimulate an open discourse on these correlations. Therefore, people are invited to question my perspective and examine the underlying data sets. This debate has already started within the international context, as I am not the first individual to

¹ The term “truther” became popular with the American 9/11 elucidation movement and was later adopted in the German alternative media scene to define people who generally seek the truth beyond 9/11. The expression “truther movement” can be used to determine the entire alternative sector, which questions the established mainstream narrative.

recognize the coherence similar to what I will outline in the book. However, the German scene needs to catch up in this regard.

One reason why isolated essential points of my thesis do not find critical discourse within the German truth movement is possibly related to the poor availability of translations. Many sources are exclusively available in English. But there are other causalities. Primarily, I see a psychological blockage that inhibits specific fearful topics from entering consciousness. You will learn soon enough what I mean by this. Therefore, I warn you in the introduction: If you are not firmly in your center, you should refrain from confronting yourself with the content because it deals with possible existential perils that could affect you mentally.

The Phoenix Hypothesis is a process that unfolds step by step. I recommend you, dear reader, to engage in it courageously and with an open mind. Rest assured—I only confront you with this content because I believe in a possible resolution to the challenges ahead. Ultimately, a perspective full of self-empowerment awaits you, even if the path there may temporarily have reminiscences of a roller coaster ride. Finally, you decide which aspects of my theory you can transfer into your worldview. Just as I was allowed to learn from many authors without fully adopting their ideas, you can do the same with my interpretations.

I seek to write a slim book that gives sensible advice on where and how to form one's opinion on crucial issues. This approach is more practical than writing a pamphlet that meticulously dictates every point of view. For this reason, I will present only exemplary facts on many aspects of my argumentation and recommend in-depth resources, like books and articles, for more profound research later on.

For this purpose, you will find a QR code and a URL in this book. You can access linked source references, embedded videos, and topic-related articles on this website. This additional information will expand over time and be adjusted to the current

situation as we go along. On my website, I list many publications that inspired me. There are brilliant books about all my hypothesis's cornerstones, which I can't improve. There is no need to reinvent the wheel.

The first part of my Phoenix Hypothesis operates almost exclusively on the physical level. Thereby I talk about correlations that one can objectify and derive assumptions from. However, I am planning further publications to illuminate spiritual interpretations. This realm is not necessarily a department that is accessible to everyone. Nevertheless, I promise to offer a scientific basis that proposes an avenue even to a materialist. Although I will keep my thesis foremost on a physical level, I believe that we must include holistic aspects for a comprehensive analysis. Thus, constructive handling of the conclusions of my hypothesis is only possible if we consider reality's physical and metaphysical nature. Therefore, I will touch upon this domain in the last chapter.

Now that I've given you a general overview, I want to start with a broad summary of the truther movement and its colorful narratives. Before I can confront you with the core of the Phoenix Hypothesis, we first need to carve a foundation on which to construct the concept. To do this, I will first examine the spectrum of the alternative narratives—how far they extend and where I locate myself. This approach also helps you to find your position within the scope of interpretations and where we might discover common ground. Rather, the idea is to establish a foundation from which we can jump into the rabbit hole together.

If you are a mainstream believer who still assumes that the television news informs you objectively, and you ignored my warning to put the book down, then this section will serve you to get to know us “crackpots” a little better.

CHAPTER 1 | THE TRUTHER SPECTRUM

1.1 The Awakening in a New Reality

The simplistic perspective asserts that there is the mainstream and, in contrast, the alternative media narrative—but this is too reductionistic. Both basic orientations are multiverses in themselves with many facets. However, the spectrum of the truther scene is naturally much broader than the framework of discussion in the established media. Moreover, there is a considerable intersection where “conservative” alternative media and fringe opinions of the mainstream overlap. Nevertheless, transitioning from a mass conformist reality into a new paradigm is a psychologically delicate act since stigmatization is omnipresent at all margins of society.

It is well known that the views of alternative media are branded with negatively connoted terms such as “conspiracy theory”¹ or even blanket accusations of “right-wing antisemitism,”² which makes it difficult for people coming from the mainstream to open up to the other view of reality unbiased. The fear of being put in the wrong pigeonhole by fellow human beings and peers is often

¹ The term “conspiracy theory” became stigmatized in the 60’s with the murder of *John F. Kennedy*. It is believed that the term got intentionally weaponized by the CIA to deal with the growing number of people who questioned the official report of *Lee Harvey Oswald* being a lonely gunman.

² There are indeed theories that target or try to blame specific ethnic groups or religions, but that is only a fraction. Still, stigmatizing individuals who question authorities, regardless of the topic, with “antisemitism” is often used as a scheme to silence opposition—this is highly prevalent in Germany.

extensive. Nevertheless, when significant experiences lead to an inner conflict, and the pressure from cognitive dissonance can no longer be compensated, a process commences that many people experience as an “awakening.” This venture is why people refer to themselves internally as “awakened people.” However, this has fallen out of fashion after the System-controlled “woke culture” had formally hijacked this designation. Moreover, most people eventually realize that “waking up” is an open-ended process. The beginnings of this mental revolution are often perceived as a dramatic experience, since the old worldview initially collapses, and many previously made convictions and opinions fall under heavy scrutiny.

When the familiar reality dissolves, people intuitively seek new support and orientation. Here, the vast spectrum of alternative media, Telegram channels, and all other subcultures that cavort outside the mainstream offer a new perspective. Whoever researches there broadly will in no time be confronted with parallel worlds that serve every conceivable fringe ideology from lizard people¹ to flat Earth.² I intentionally name here such topics, presented by the mainstream as repulsive and “crazy” examples, to convince the “sheeple” to remain in the herd. Nevertheless, I will touch on these fringe subjects later.

When I first started investigating these parallel universes around 2002, I could hardly see any gross contradictions or discrepancies between the alternative views. Every analyst there seemed to be looking at the same mystery and postulating their

¹ “Lizard people,” is the claim from many cultures and sources that there is a reptiloid race that lived or still lives hidden from humans. The thesis of David Icke became famous, for example, in the book “The truth will set you free.”

² The idea that the Earth could be flat is explained, for example, in popular documentaries such as “Level.” For many analysts, flat Earth theory is only the precursor to simulation theory - the assumption that reality is only a virtual construct. Link: <https://www.bitchute.com/video/ZzBBX25xdK1h/>

theories. Everything seemed free, tolerant, and respectful of the other facets. The common adversaries were the mass media conglomerates of *Rupert Murdoch*¹ and his kind, who mentally indoctrinated people—at least they limited their perception, censored opposing voices, and nudged the audience toward their narrative. That was the consensus back then—we felt the world was much more complex than they showed us. The split within the alternative narratives was light years away from becoming the battlefield of opinions we see today.

Let me give a few examples of how this polarization of the truther movement has developed from 9/11 to the present. I intend to show you how the “divide and conquer” principle has repeatedly prevented a critical mass from effectively breaking the spell of mass manipulation.

1.2 The 9/11 Momentum

For many of my present companions and myself, September 11, 2001, was the moment of our great awakening. The initial gut feeling that something about the official conspiracy theory could not be right was promptly supported by concrete facts. These contradictions piled up into a mountain of question marks. By the “official conspiracy theory,” I mean the mainstream thesis, held at the time and still propagated today, that a certain *Osama Bin Laden* and his henchmen had allegedly devised a masterful conspiracy. According to this theory, the kidney-diseased CIA

¹ *Keith Rupert Murdoch* is an Australian-born American business magnate, media proprietor, and investor. Through his company News Corp, he is the owner of hundreds of local, national, and international publishing outlets around the world, including in the UK (*The Sun* and *The Times*), in Australia (*The Daily Telegraph*, *Herald Sun*, and *The Australian*), in the US (*The Wall Street Journal* and the *New York Post*), book publisher HarperCollins, and the television broadcasting channels Sky News Australia and Fox News (through the Fox Corporation).

apprentice¹ coordinated a massive attack with passenger planes from inside a cave, which made the entire U.S. air defense look like amateurs.

I want to avoid summarizing the facts from years of research that have convinced me that 9/11 was the most significant false flag operation² in recent history. Many brilliant books and documentaries have been published about the contradictions within the official narrative. Those who still need to do their homework on the subject will be hard-pressed to follow this reading in the long run. Nevertheless I will mention a few essential sources that led me to this conclusion. Eventually, you could catch up on some of the subject matter.

Burning World Trade Center on 9/11

-
- ¹ *Osama Bin Laden* cooperated with the CIA during the occupation of Afghanistan by the Russians and was demonstrably treated in an American military hospital shortly before 9/11.
 - ² The term false flag operation is used in covert warfare. It refers to attacks staged by one group to implicate another. Most often, such procedures are instigated to justify wars of aggression. (See Gleiwitz station as starting point of WW2, or the Gulf of Tonkin incident).

So, the book is not about rehashing 9/11. Primarily, I want to show the split that developed over the following years in the context of what really happened on September 11. In fact, in Germany, the first popular alternative explanations came from the mass media outlets, with real journalists involved, such as *Gerald Wischnewski*,¹ losing their jobs and reputations in the mainstream over their renegade perspective. In the years that followed, one repeatedly heard isolated theses, mostly on television, speculating about whether the U.S. might have let the attack happen to instate a catalytic element that would allow the empire to improve its geostrategic position. This view was equally the starting position of many alternative analysts. The so-called “LIHAP thesis”² competed with the equally prevalent assumption that the U.S. government itself had provided the terror—i.e., the “MIHAP thesis.”³

These alternative assumptions led to further divisions over the question of who was actually behind the machinations. Was it solely the U.S. government under *George Bush*, *Donald Rumsfeld*, and *Dick Chaney*? If so, why did no other country effectively point the finger at them? Were they all afraid of the mighty Americans, or was a more significant power structure pulling the strings in the background? Here, opinions and narratives were slowly differentiating.

¹ *Gerald Wischnewski* produced “Aktenzeichen 11.9. ungelöst.” WDR (2003); later, he wrote the book “Mythos 9/11” which is considered a standard work of the truther scene in Germany.

² Acronym of “let it happen”; thesis assumes that the U.S. government knew about the attack but did nothing about it.

³ Acronym of “Make it happen;” the thesis assumes that the government took care of the terrorist attack itself.

Subsequently, the breakdown became more detailed—for example, what caused the towers to disintegrate.¹ Some speculated on nano-thermite, and others held tight to the jet fuel narrative. Likewise, analysis of the television images revealed anomalies, leading some truthers to realize that massive use had been made of CGI (computer-generated imagery) during the live broadcast.² The existence of artificial film compositions caused some analysts to doubt the presence of physical airplanes in the context of the events surrounding 9/11. Thus, the faction of “no-planers” emerged.

These schisms permeated the entire discourse on the September 11 investigation like metastases. Thus, some analysts suspected early on that intelligence agencies deliberately facilitated the division with new theories. Thus, the truthers accused each other of undermining serious research with their naïveté. Usually, it was always the other faction that fell for the System’s scheme. Consequently, the truther movement fragmented into many small 9/11 blocs, which still passionately cling to details and stubbornly insist on their point of view.

After about ten years of 9/11 research, I had to realize that the “divide-and-conquer” principle had rendered the countermovement so ineffective that no critical mass could materialize to build compelling pressure. A reappraisal was no longer to be expected. Meanwhile, the consequences of September 11, 2001, were, in any case, warlike facts in the Middle East, Afghanistan, Libya, and many other places in the world. There was nothing to neutralize

¹ Architects & Engineers for 9/11 Truth, Inc. is an American non-profit organization Promoting that the World Trade Center was destroyed in a controlled Demolition, disputing accepted conclusions around the September 11 Attacks, including the 9/11 Commission Report.

² The documentary “September Clues” by *Simon Shack* shows the visual anomalies that point to computer-generated imagery. Link: <https://tinyurl.com/ym7zsnex>

this dynamic. Moreover, shortly after 9/11, a fatal process was initiated that could not be stopped and continues blithely to this day. First, the relationship between NATO and Russia became increasingly hostile, and second, the erosion of civil liberties progressed relentlessly.

1.3 The German Vigil-Movement

While the West's relations with Russia had been gradually deteriorating since 2001, there were developments around 2014 that underscored the dramatic downward trend. Ukraine was at the center of this escalation, which was "reformed" with the help of Western intelligence agencies and NGOs.¹ *George Soros'* fingerprints were all over the place.

Because Russia was initially passive, the narrative within the alternative media was almost homogeneously pro-Russian. Everyone recognized that the provocations were coming from the West. NATO tried to push Russia into a corner without making it look too obvious. This process began with the missile defense shield, escalated in Ukraine, and continued in Syria.

In 2014, with the Maidan revolution in Kyiv initiated by Western secret assets, the animosities crossed a tangible threshold for most truthers. Anyone who did not follow the propaganda in the mass media could see that this was a tremendous escalation—a dynamic that triggered anxiety among many Germans. The people's collective memory apparently knew exactly the possible consequences of poking the Russian bear with a stick for too long.

¹ NGOs are organizations, i.e., groups and lobbying associations, for which it is crucial to carry out their work independently of government funding. Non-governmental organizations do not pursue immediate profit goals but are often used to catalyze social change.

This awareness led to the vigil movement,¹ which formed primarily at the Brandenburg Gate in Berlin. I was also active in an offshoot of this movement that had organized itself in Magdeburg.

Peace virgil in Hamburg, 2014

Even back then, there were always discussions in our small group, which consisted of about twenty activists, about the prediction that a significant escalation between Russia and the West would transpire within European prophecies. Like *Edgar Cayce*² in the U.S., we have our own seers that articulated a specific warning regarding the German future. This dramatic augury gave our cause more passion. Unfortunately, we had to realize soon after that various nationalist groups deliberately infiltrated the movement.

¹ Vigils for Peace (also Peace Movement 2.0, Peace Vigils, Monday Demonstrations 2014 or Monday Vigils) are the names given to rallies that took place mostly on Mondays in Germany, Austria, and Basel from March 17, 2014. With the name and date, the organizers place themselves in the tradition of the peace movement and the Monday demonstrations in 1989/1990 in the GDR.

² See appendix for more details about *Edgar Cayce*.

It was common knowledge among us that German secret services ran the right-wing scene. These infiltrations became apparent with the numerous “V-Mann”¹ scandals in the '90s and later through the NSU case.² Obviously, the System was secretly counteracting here. It cleverly divided the movement by enriching the demonstrations with Nazis and further activating Antifa to make a stink. Just imagine a peace movement in the U.S. with Clan and White-Pride members suddenly filling the ranks. The power in the background wanted the escalation between NATO and Russia at any price. So, they disintegrated the resistance effectively. But why was the conflict so crucial to the System?

The separation in the phase around 2014 did not come directly from the truther scene if one wants to exclude the nationalists, respectively, the neo-Nazi movement from the larger counterculture. If you look at it neutrally, however, in principle, the revisionists also belong in the larger box of the conspiracy theorists because they also criticize historical inconsistencies and postulate their theses on how the world can be explained outside the mainstream narrative. Nobody wanted them, but we couldn't ignore them either. They are the filthy children of the alternative subculture, gladly instrumentalized by intelligence agencies to give the skeptical free thinkers a brown coating—tainting the criticism of the System with a Nazi stigma, making the movement completely unattractive for “average Joe.” Thus, no critical mass could emerge within the population to demand an end to the geopolitical escalation with Russia. Although a substantial majority wanted peace, nobody wanted to march with “Social

¹ Agents of the German secret service operating in high positions of right-wing parties were documented repeatedly to radicalize the audience at gatherings.

² The involvement of international intelligence services and the German domestic intelligence service became increasingly evident as the investigation progressed. Due to the sudden death of many witnesses, including the main protagonists, there was never any satisfactory evidence.

Nationalists” for a common cause. This tactic worked flawlessly to limit the outcry for peace.

Watching most people’s legitimate jawning for geopolitical serenity and honest efforts being crushed by the media with the so-called “Nazi mallet”¹ was a bitter experience. At that time, I was still hoping that a critical mass would arise from the people to expose and disempower the System. Unfortunately, when this naïve illusion fell, it only led to my resignation. I had to drop out.

Nevertheless, new impulses sprouted from this vigil movement. Activists like *Ken Jebesen*² or the journalist *Thomas Röper*,³ who still articulates Russia’s voice in Germany, were activated by this process or grew in popularity. In contrast, I shifted away from the truther movement and started searching for ways to circumvent the System—my approach to escape was still very naïve but courageous. Consequently, I went on a pilgrimage through many countries, always looking for a place of freedom. Nevertheless, I remained an attentive observer of the alternative media scene. So I spent years in an in-between world—observing while trying to stay emotionally detached from collective events as much as possible. But this strategy had its limits.

¹ Method to portray every countermovement as Nazi-related.

² *Ken Jebesen* became an activist and was often invited to speak at vigils. Later, he was elevated to the mouthpiece of the German truther scene, persecuted, and censored on social media. Today he runs the media portal “Apolut” and is acting more in the background.

³ *Thomas Röper* calls the Maidan 2014 his awakening moment and, from then on, wrote about what was happening in the NATO vs. Russia conflict, with Ukraine as a proxy war. Today he is considered Russia’s voice in Germany and portrait as “Kremmeltroll.”

1.4 Beginnings of the New Normal

Even before 2020 began, I had realized that there was no feasible way of evading the System entirely. It is omnipresent and has its tentacles in all countries and institutions. But from the beginning of January, I anticipated it would shift up another gear to transform the world fundamentally. I couldn't even look away. In the depths of my favorite conspiratorial Internet forums, anonymous whistleblowers¹ were continually gathering, claiming to be privy to the planned development. Accordingly, as early as January 2020, such individuals who supposedly worked in high public health positions (e.g., British CDC) were sworn into a homogeneous narrative that a dangerous bioweapon had escaped from a BSL-4² laboratory in Wuhan. Since both the U.S. and Chinese governments had their fingers in the project, speculation about the circumstances of the release was of national security interest. There was no discussion of who might be to blame for the "incident." If their stories were to be believed, these officials were told to prepare for a global pandemic that would make it necessary to implement widespread lockdowns.

At the end of January 2020, the unprecedented mass of whistleblowers flooding the leading conspiracy forums and the recurring patterns of their assessment of the situation therefore, warned me that drastic countermeasures were already being initialized that would also have consequences for me—even here, on the outskirts of Mexico.

¹ The term "whistleblower" is mainly used to describe secret service employees and secret holders from government positions who have broken their duty of confidentiality and illegally disclosed information to the public.

² BSL-4 describes the highest safety level in a laboratory when handling biological pathogens. The abbreviation "BSL" stands for "biosafety level."

The author at the East Cape, Baja California

At that time, I was seeking my salvation as a surf nomad on the beaches of Baja California. In early February, while mass media was still appeasing the people, the indications that something big was brewing were becoming increasingly substantial. Initial thought reflections formed in my mind that I had previously seen this scenario in a broader context. Specific statements of an infamous Project Camelot whistleblower regarding the “Anglo-Saxon Mission” agenda forced their way into my consciousness. In 2010, this source claimed that plans were being discussed, as early as 2005, to stage a pandemic in China to put the world in a state of emergency.

Amazingly, the anonymous CDC whistleblowers and the Project Camelot insider were to be proven right because a global emergency had been installed in 2020. At that time, I was camping in my RV near Todos Santos, prepared to stay in Mexico longer than planned. Fortunately, I recognized the warning signs right in time. When the Mexican authorities started to chase the surfers away from the beaches, my inner circle of friends had taken precautions because I never got tired arguing my assessment of the

situation. At that time, the alternative media scene contacted me again through an old friend. In the 7th issue of *Nuoviso Homeoffice*,¹ I gave a report on the current situation in Mexico. On that occasion, I expressed my thoughts that whatever was going on globally here was a purposeful step toward a new world order. This course was also coined the “New Normal” or, somewhat later, dubbed the “Great Reset.”

In April 2020, the “fear machine” is running full steam.

The deliberate manipulation of the situation, camouflaged behind incompetence and overcautious reactions on the part of the political puppets, became evident to many people. This initial skepticism increased with the lockdowns and escalated with the vaccination program. Hence, people gathered as an act of civil disobedience, and thus the “Querdenker”² emerged from this

¹ Homeoffice is a talk show initiated by *Frank Höfer* and broadcast on YouTube, which began with the lockdowns. Early on, the contradictions of the mainstream narrative are discussed there.

² German countermovement criticizing the mandates, lockdowns, and the vaccination program. “Querdenker” translates to “lateral thinkers,” or “people, who think outside the box.”

resistance. The movement became a melting pot consisting of the old guard of conspiracy theorists and a new generation of truthers, commonly referred to as the “newly awakened.” Again, the nationalists showed up to give the demonstrations the “right” framing for mainstream news. Some people immediately booked their shots because vaccination hesitancy was considered one of the first symptoms of a latent Nazi mindset. Nobody wanted to fall into this category.

However, those who, for the first time, could no longer ignore the fact that a diffuse power had infiltrated democratic structures were confronted with a broad spectrum of interpretations. These narratives came from the established alternative media scene and various right-wing factions. Accordingly, the suggested solutions varied from naïve to radical. This development divided the growing community of the truther movement into different narratives. These groups’ common denominator centered on the perception that higher structures of power control media and politics. These institutions limit the scope of discussion and manage the discourse within the mainstream context. Critical voices, on the other hand, were marginalized and demonized. But there was no real consensus about who had the power to coordinate these structures and what agenda was dictating their actions—until Klaus Schwab published his new book.¹

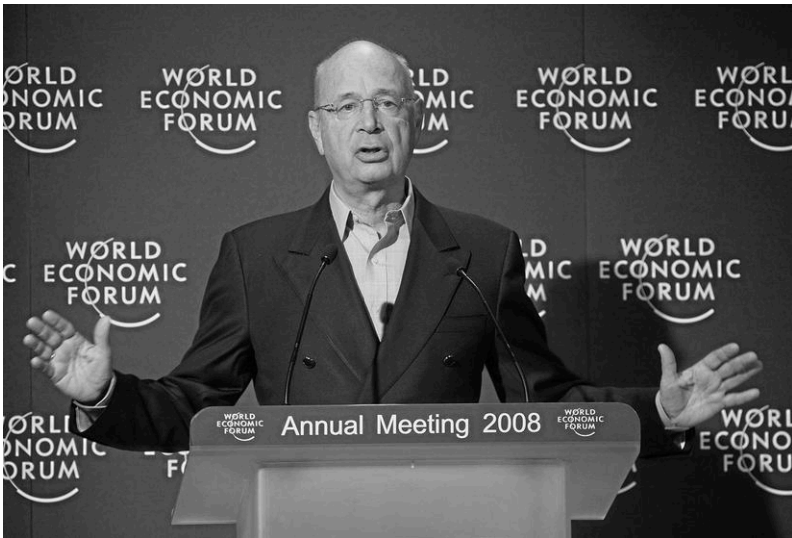

To this day, the majority of alternative analysts suspect the string pullers in the haze of the World Economic Forum. This grouping became the primary focus because the WEF was not only involved in the ominous exercise “Event 201”² in August 2019—which is regarded as the dress rehearsal for the Corona

¹ Schwab, Klaus “COVID-19: The Great Reset”

² The Johns Hopkins Center for Health Security, in collaboration with the World Economic Forum and the Bill and Melinda Gates Foundation, hosted a high-level pandemic exercise on October 18, 2019, in New York, Event 201.

show. Besides, shortly after the pandemic's start, the “Great Reset” was presented as a solution for this and all future crises. So they were not only the ones who prepared it, but they were also the first to present a resolution. For truthers, this is a classical scheme called “PRS.”¹

1.5 The Great Reset

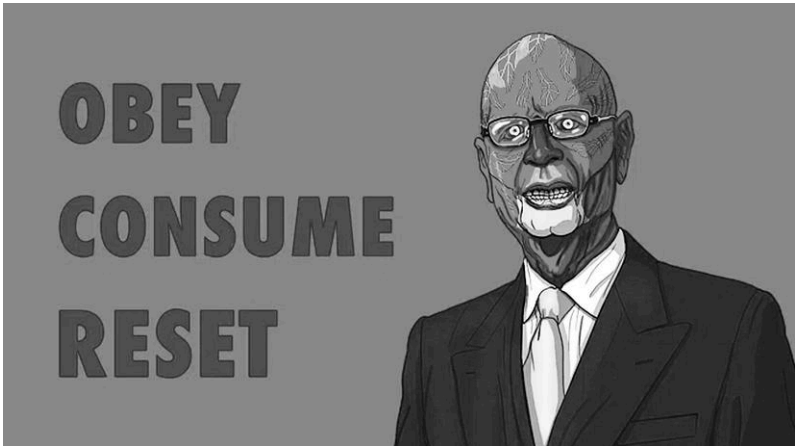

Klaus Schwab at his annual meeting in 2008

Only a few analysts of the alternative scene had the WEF on their radar before 2020. Regarding non-democratic structures capable of installing politicians and controlling the media, the Bilderberg

¹ The Problem-Reaction-Solution (PRS) scheme is a manipulative technique to change society at a fast pace. First, we have or create a crisis. Then we wait for an emotional reaction like fear and outrage. Then we can present the solution we wanted in the first place.

Group, the CFR,¹ and the Trilateral Commission were always at the top of the power pyramid. At least, that was the general reductionistic perception within the scene.

With the “Event 201” exercise as a final rehearsal for the pandemic, the organizations that were to play a critical role in the Corona period revealed themselves in advance. This rendition was not initiated by the WEF alone. In the mix were also the Bill and Melinda Gates Foundation, the World Health Organization (WHO), the Johns Hopkins Institute, and intelligence agencies such as the CIA, Facebook, and Alphabet, which includes Google and YouTube. There were many other supporters, and the old supreme monumental organizations, such as the Bilderberg Group, remained active in propagating the plan during the implementation stage. This crisis strategy was widely communicated as the “Great Reset” based on the book by *Klaus Schwab*.

A classical *Schwab* meme based on the movie “They Live.”

As the figurehead of the WEF, *Mr. Schwab* became the center of

¹ Council on Foreign Relations

many alternative theories. His persona perfectly embodied the villain archetype, which most analysts associated, not without reason, with well-known antagonists from Bond movies. Other key figures around the Forum, such as *George Soros* and *Bill Gates*, also fell into this pigeonhole. Therefore, it is understandable why many interpretations of a sinister agenda behind the pandemic masquerade revolve around the WEF.

While today the majority of analysts see the World Economics Forum as the epicenter of evil that wants to bring the world entirely under its control, there were also a few nuanced positions within the truther movement. Explicitly, the more economically well-heeled faction with an affinity for number crunching understood that a near exponentially growing world population was bound to pose unpleasant challenges to global society. Accordingly, an uncontrollable collapse would be inevitable if no one would limit the Western world's rampant consumption of natural resources. After all, we were moving toward 8 billion people, and the time to the next billion was getting increasingly shorter. If an expanding proportion of global society were to indulge in a lifestyle like the Western world, the implications would be fatal. Not only would the consumption of rare raw materials inevitably reach a critical level. Waste output, environmental toxins, and drinking water pollution would take on threatening dimensions.

Accordingly, the elites had to know that all their money and physical possessions would become worthless if an uncontrolled struggle for the last resources broke out. Consequently, there was a small but elite faction of critical observers who saw the "Great Reset" as a necessary evil to correct the course of the global community before we collectively fell off the metaphorical cliff. Within this perspective, many aspects of the WEF agenda could be explained, and even moral arguments could be made to some extent. Maybe it was justified to curb population growth to prevent an uncontrollable war over the last resources. After all, we already see conflict over clean drinking water in some regions. On

a global scale, such a shortage could unleash the total collapse of the world community. This cause could provide a tangible rationale for staged pandemics and phony vaccination campaigns that do more harm than good.

Discussing a supposedly noble intention or at least necessary “evil” behind the “Great Reset” was minimal. This view mainly remained a private matter of wealthy skeptics of the mainstream because nobody likes to play “Devil’s Advocate” in front of a highly agitated community of amateur revolutionists. The main argument that further population growth with the current parameters would lead to catastrophic consequences was dismissed anyway by the majority of alternative thinkers. The common belief amongst the truthers is that the specter of “overpopulation” was an implemented myth made up by the elites and that all possible challenges of a growing Earth community could be overcome with “suppressed” technologies based on zero-point energy.¹ The elites would only have to take their hands off certain patents, and even 20 billion people should no longer be a problem for the planet. That roughly summarizes what the opposing voices from the alternative corner were echoing.

There was no noteworthy discussion in the alternative media in the context of “challenges of a growing Earth population” concerning the “Great Reset.” Here, people preferred milking the concept of the Bond villain *Schwab* against the good and the just. Nevertheless, in general, we should not disregard this view of the “necessary evil,” as this narrative explains why many bright and rich people, who do not necessarily belong to the upper league of *Bill Gates* and Co. but also do not trust the mass media, avoid opposition to the “Great Reset.” Some might even applaud the

¹ Collective term in alternative media describing technological processes according to which almost unlimited energy resources can be tapped in the quantum field.

cause. They sometimes suspect a bitter necessity with which they must come to terms. Thus, a small but financially potent portion of the “truthers” was fading away from the strive for verity.

Although mentioning the discussion about moral justification is paramount, this front was only an insignificant sideshow. Still, it could explain why many influential people look the other way when population control becomes obvious. To this day, the polarization of the alternative media is primarily taking place around the question of how far the WEF’s influence extends, what their unofficial agenda is, and which influential figures or powers still stand above the organization. There is agreement that cockroaches are not an acceptable source of protein. Also, the whole transhumanist agenda¹ behind the “Great Reset” is viewed critically by many, but regarding certain fundamental aspects in the context of the WEF, the division amongst truthers is pervasive. An emotionally charged discourse revolves around the question of whether Russia and China are real opponents of the Forum or whether they are just compliant catalysts to help install the One World Government?²

In summary, dissecting the WEF forms a common trajectory in the alternative media that, upon closer examination, breaks down into many sub-narratives. The fundamental assumption is that an all-encompassing understanding of this organization’s true intentions can explain numerous global anomalies and crises. Therefore, hardly any analyst within the alternative spectrum has yet to touch on the “Great Reset” to form his conclusions. One

¹ Fusion of man and machine, with machines and their artificial intelligence making humans virtually obsolete. Particularly “progressive” are the fantasies of the WEF’s transhumanist mastermind, *Yuval Noah Harari*, who, for example, wants to embed the human mind in a virtual construct, making the body dispensable.

² This refers to a world order that is controlled by a central super-government and makes nation-states obsolete. Also known as the “New World Order.”

inevitably comes to the World Economic Forum when one seeks to understand what mechanisms have led to the use of utterly counter-intuitive gene therapy.¹ In health terms, this “countermeasure” has already caused more damage² than the supposed pandemic, it was officially intended to combat.

1.6 The QAnon Movement

Q-believers at a *Trump* speech.

The QAnon movement must be mentioned as a prime example of the fragmentation and polarization of alternative currents. For a significant part of the truther community, this narrative is an almost religiously celebrated belief in a positive power behind the

-
- ¹ The mRNA vaccinations are often referred to as gene therapy inside the truther scene because they no longer fit the old definition of “vaccination” and this term fits better.
 - ² Allusion to the statistically evidenced global excess mortality that has progressed since 2021 and is correlated with mass vaccination in the alternative media. The causality between vaccination campaigns and excess mortality has not been officially acknowledged yet.

scenes. In contrast, for the other faction, it is only the most skillful PsyOp¹ that intelligence agencies ever came up with to divide the countermovements.

This sub-faction of the truther culture was inspired and formed from anonymous messages on internet forums such as 4-Chan. According to the believers, these so-called “Q-drops” originated from a group that is determined to drain the international swamp of sinister collusions instigated by power mongers. This Q-network consists of patriots within various military branches and political institutions. They consider themselves “White Hats.”² Effectively, they are agents with benevolent and humanistic ideals embedded in organizations that are generally considered tools of the System. Their spectrum of members extends across all three-letter organizations³ and other international intelligence agencies.

According to this narrative, *Donald Trump’s* role as a central figure in the battle to drain the swamp is persistent—his involvement is said to extend far beyond his presidency. The analysts and opinion leaders within this Q-movement are so colorful and sometimes contradictory that one could write an entire book on the excesses of this spin-off. Just as in religious portrayals, it is a tasty mix. The Q-narrative is based on known facts in the context of the international conspiracy, which are then spoiled with deliberately stirred fiction. This method firmly establishes the

¹ PsyOp is a military shortcut for psychological warfare or psychological operation. In military affairs, it refers to all methods and measures for influencing the behavior and attitudes of opposing armed forces and civilian populations as part of or in the run-up to military operations.

² “White hats” originates from the medieval mythology of sorcerers and magicians who use their art for altruistic or egoistic purposes and differentiate themselves by the color of their clothing (or hats).

³ Intelligence agencies that often distinguish themselves with three letters like NSA or CIA etc.

belief in sure salvation after all lies have been exposed. This principle is also a fundamental part of all religious control mechanisms. No matter how terrible things get, Jesus and the Kingdom of Heaven await the believer in the end.

A faithful follower of this Q-narrative will not be dissuaded from his convictions any more than a Baptist, a fundamental Muslim, or a Jehovah's Witness, no matter how extensive the inconsistencies and contradictions may pile up. What is so dangerous about this narrative is not its proximity to nationalist and conservative circles, as it is portrayed in MSM, but the belief that the battle against the evil "Deep State" has already been won. Just as professional chess players can see many moves before the end that their defeat is inevitable, the movement claims that its opponent also knows that he is already *de facto* checkmated. So one can sit back, eat popcorn, and enjoy the show. This credo propagates inertia and blind trust.

The reason why the cabal stages more and more crises, although *Trump* and his minions with the white caps are already considered the clear winner, has to do, according to the Q-narrative, with the fact that first, enough people have to wake up. According to this, the "good guys" let the "Deep State" flounder a bit longer and also grant it a few moves on the "5-dimensional chessboard" until the last sleeping "sheeple" realizes that a corrupt cabal is deceiving it. Only when the people's anger and the general awakening have reached a critical threshold will arrests take place, and an international tribunal will condemn the evil-doers. Ultimately, peace and freedom will prevail, just as everyone wishes. The belief in a better world at the exit of a valley of tears is omnipresent within the Q-movement. According to the general guideline, you just need to be patient and let the Q-folks do the job while you stay passive.

I do not want to delve deeper into this narrative at this point. The movement needs only to be roughly covered because it has,

among other groups, ensured that the interpretive landscape of the alternative media has become highly fissured. It serves as a prominent example of the division within the truther scene. Accordingly, the perceptual spectrum of how new significant events on the world stage are interpreted is multiplying. The opinion leaders among the analysts of the Q-movement succeed in putting even the ongoing escalations and crises in a positive light. They argue that such events are only “allowed” to promote the awakening of the sleeping masses. The psychological obfuscation occurs in the Q-movement through the drug “hope.” In English, one speaks thereby also of “Hopium.”¹

Unfortunately, the truther scene is interspersed with addicts of this immaterial substance, who are ready to swallow the most absurd stories as long as a hopeful scenario can be extorted from it. That principle includes perpetuating the myth of a savior. In the process, “Hopium” frees people from claiming personal responsibility and taking the initiative into their own hands, making this kind of PsyOp so perfidious. It reminds me of the tactics of Operation “Trest” shortly after the Russian October Revolution.²

To summarize the situation, the System keeps those who have broken out of mainstream mind control in lethargy. The ruling power succeeds best by either pushing the countermovement into absolute resignation or feeding them a hopeful scenario on which they remain in passivity—in complete trust in a higher authority

¹ Hopium is an artificial word construct composed of “hope” and “opium.” This analogy states that hope, like the drug opium, is addictive, and the addicted consumer tends to accept even inferior material when he needs more of it.

² “Operation Trust” (Russian: операция “Трест,” tr. Operatsiya “Trest”) was a counterintelligence operation of the Secret Police (GPU) of the Soviet Union. Created by the GPU’s predecessor, the Cheka, the operation ran from 1921 to 1926. It established a fake anti-Bolshevik resistance organization, the “Monarchist Union of Central Russia,” MUCR, to help the GPU identify genuine monarchists and anti-Bolsheviks. The front company created was called the Moscow Communal Credit Union.

that saves the day. Both principles are only different sides of the same coin. As an analogy, one could claim that one keeps a person imprisoned as long as one can convince him that an escape is futile or credibly conveys to the inmate that his liberation is imminent if he keeps calm. It can be as simple as that. Unfortunately, many truthers are stuck in one polarity or the other, or they swing back and forth between the extremes.

1.7 Lizard People and Flat Earth

The administration of the Denver Airport reacted to the numerous “conspiracy theories” surrounding the structure by framing and fusing them with the “Lizard People” concept.

The alternative scene is interstratified with various more or less abstract belief systems, which internally lead to massive divisions. Among them, I count those substructures of the truther community, which deal with extraterrestrial presence, Tartaria, the concept of flat Earth or the infiltration by reptiloid races, to name only a few prominent examples, which are gladly picked up by

MSM to discredit the alternative media in general. I will refrain from going into the topics individually, but I want to identify three main paradigms that I consider relevant to illustrate the polarization of the scene.

First of all, there is a rather conservative milieu of materialistic analysts, who would sometimes also be great journalists in the mainstream or have even emerged from it. These people tend to be more permissive within the pool of objectifiable data than their mass media colleagues. I would call this faction the “reasonable realists.” They make no statements, which they cannot prove 100%, and stay away as far as possible from “fringe topics.” They would never fantasize about extraterrestrial influence or consider esoteric concepts. In their world, it is only about the question “Cui bono”¹—about power and money. The conspiracies of this world are, for them, exclusively consequences of the multilayered intrigues of a perverted elite, which lost all connection to humanity.

Some representatives of this truther faction can be recognized by their pronounced black humor and cynicism, which seems to be a compensation mechanism which helps them endure the psychological implications of their research. Their basic understanding of reality, is firmly anchored in a Cartesian worldview,² which is based on Newtonian physics.³ Everything consists of large and small spheres that attract, repel and revolve around each other but are subject to firmly determined interactions and ulti-

¹ The question Cui bono /kui 'bɒno/ (Latin for “To whose benefit?”)

² The principles of Cartesianism in the broadest sense are self-certainty of ego consciousness (see “Cogito ergo sum”), clarity and distinctness as criteria of truth, matter as space fulfillment, dualism, corpuscular theory, methodological doubt, rationalism, and appreciation of mathematics.

³ Newtonian mechanics is the branch of physics that describes the motion of solid, liquid, or gaseous bodies under the influence of forces. Typical applications of classical mechanics are celestial mechanics, engineering mechanics, hydrodynamics, aerodynamics, statics, and biomechanics.

mately perform a chaotic dance that is not subject to any higher order.

With my Phoenix Hypothesis, I will remain on this level as far as possible, except for some isolated extensions of this paradigm. I deliberately choose this perspective because it accurately depicts our daily reality of experience and simplifies the argumentation. Thus, the thesis remains compatible with a broad audience. Nevertheless, in some places, especially at the end of the book and this section, I will touch on an extended hypothesis that spans all significant phenomena into a unified model.

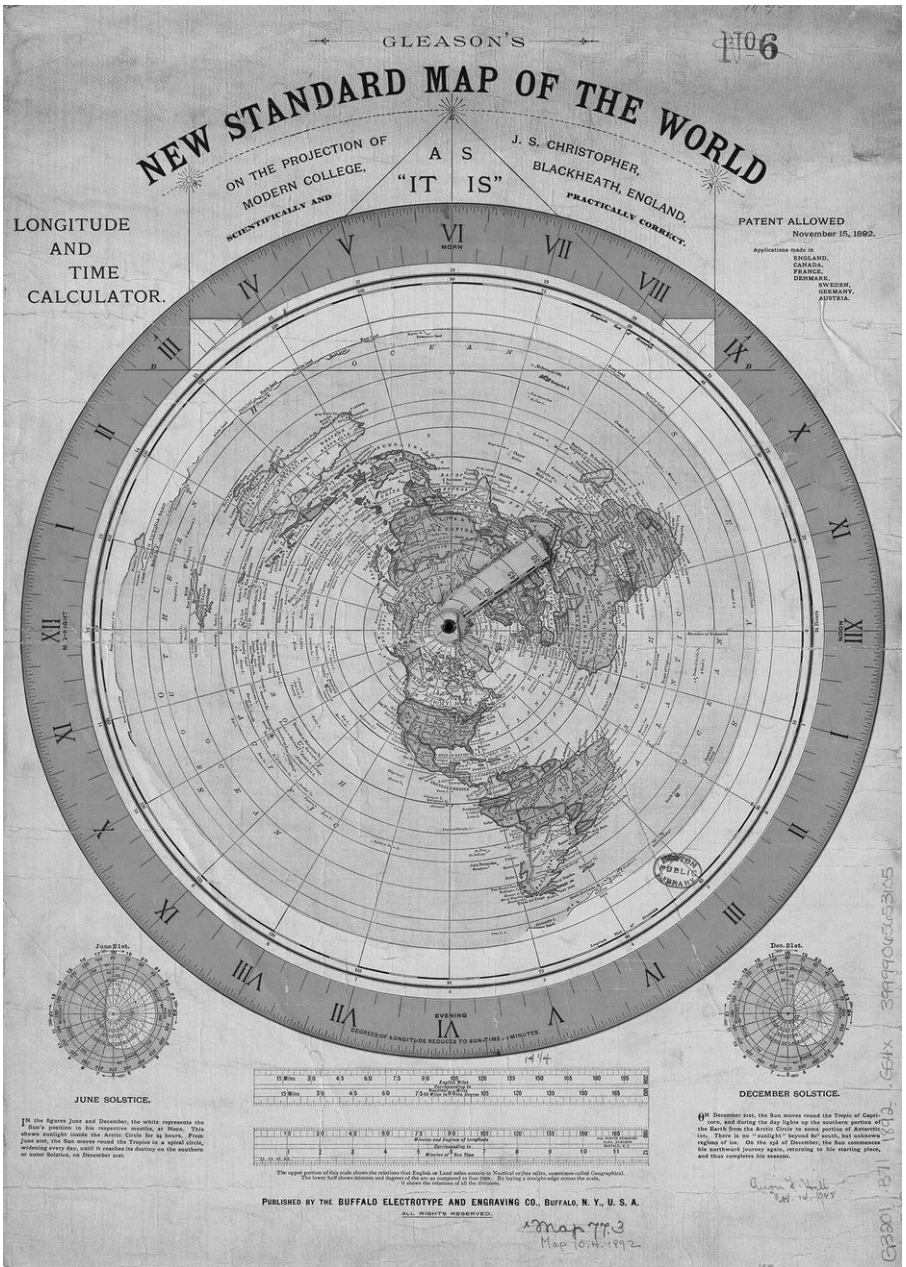

Suppose we see the conservative view of the “reasonable realists” with their Newtonian and heliocentric worldview as the primary thesis. In that case, the supporters of the flat Earth theory represent the antithesis of it. They form my second group, which also differentiates into different subdivisions, which consider the “plane-t” more or less concave, but assume a plane that lies under a dome. If you study their publications, you will find that their reality is based on complex anomalies and models.¹ In addition, this group is confirmed again and again by bunglingly staged live transmissions from the ISS that space is an illusion.²

To a large extent, the flat Earth theory is linked with various other topics, which I cannot summarize without losing the thread here. I want to encourage followers of this perspective to consider those aspects of my remarks based on NASA sources, purely hypothetically. The Phoenix Hypothesis can undoubtedly be integrated into a flat Earth model—which means my thesis works independently of the planet’s shape.

¹ See popular documentary series “Level”; Link: <https://tinyurl.com/36ssumaf>

² Numerous videos exist that indicate image manipulation by NASA and ESA, which does not automatically mean that space does not exist or that the ISS does not exist. Still, here is an example: <https://tinyurl.com/2s37jb5s>

THE PHOENIX HYPOTHESIS

Gleason's standard map of the (flat Earth) world?

Now we come to the third alternative mainstream, which is still tiny but gaining more momentum. This subgroup of fundamental world views could be understood in the sense of the Hegelian dialectic,¹ as a synthesis of the first two contrary paradigms. From thesis and antithesis it synthesizes the renaissance of one of the oldest philosophies.

This model is ancient and existed in the earliest records of documented human history. Thus we find the concept of “Maya”² already in the Vedas, which describes the worldly reality as a holographic construct or a “cosmic illusion.” We find this conception likewise with the Aborigines of Australia and their model of “dream time.”³ *Plato* formulated a comparative approach with his cave allegory if one understands his idealism as an analogy to the first law of hermetic philosophy:

“Matter is made of consciousness, and reality is a mental construct.”

In the postmodern era, this worldview experienced a rebirth through pop culture films⁴ and inspired science, which was evi-

¹ Named after *Georg Wilhelm Friedrich Hegel* (* August 27, 1770, in Stuttgart; † November 14, 1831, in Berlin). He was a German philosopher who is considered the most important and last representative of German idealism.

² Maya (Sanskrit मया māyā “illusion, sorcery”) is a term of Indian philosophy. It is considered to be the unfathomable creative power of the absolute Brahman. Since it embodies the world of appearance as a whole, the concept of Maya unites all dualities. It encompasses the positive knowledge (vidya) as well as the negative ignorance (avidya) of man. In Shankara’s expositions, the term is used in a negative sense to express a universal delusion and the power of deception.

³ The term Dreamtime or Dreaming is known in the mythology of all Australian Aborigines as a concept of their ethnic religions.

⁴ The basic concept of virtual reality was anchored in pop culture by the *Wachowski* siblings *Matrix* Quadrology, but also by *Dark City* and *Inception*.

dent, for example, in *Nick Bostrom's* simulation hypothesis.¹ Well-known anomalies, such as the EPR paradox² and the phenomenon of wave-particle duality³ underpinned *Bostrom's* work, and even the familiar *Planck* units⁴ suggest that reality is “pixelated,” quantized, and thus computable. The evolution of space-time-spanning quantum computers and the exponential development of highly immersive simulations assume that we already live in a form of simulacrum⁵—at least it seems more than plausible.

With this model, all the paradoxes and anomalies in collective reality can be argued in a unified way. All contradictory phenomena can be put into one coherent picture, from reincarnation to Bigfoot—or even Lizard people, if you want. Accordingly, the flat Earth theory is merely an insignificant intermediate step towards

-
- ¹ Philosopher *Nick Bostrom's* simulation hypothesis is the consequence of an assumption in a model of thought. Origins of the simulation hypothesis can be found in the interpretations of quantum mechanics and considerations of numerous physicists and computer scientists, including *Carl Friedrich von Weizsäcker*, *John Archibald Wheeler*, *Stephen Wolfram*, *Jürgen Schmidhuber*, and *Gerard't Hooft*.
 - ² The Einstein-Podolsky-Rosen paradox, also known as the EPR paradox, or EPR effect, is a quantum mechanical phenomenon that was intensively discussed in the 20th century. See appendix for more information on “non-locality.”
 - ³ The wave-particle dualism is a realization of quantum physics, according to which the properties of classical waves, as well as those of classical particles, must be attributed to the objects of quantum physics equally. Classical waves propagate in space. They weaken or strengthen themselves by superposition and can be present simultaneously at different places and have an effect with different strengths. A classical particle can be present at a time only at a particular place. Both properties seem to be mutually exclusive. Nevertheless, several key experiments proved that both properties are present in different quantum objects so that one attributes a matter wave to each body. See appendix: “double slit experiment”
 - ⁴ Named after the physicist *Max Planck*. The importance of the Planck units lies, on the one hand, in the fact that the Planck units mark minimal limits (e.g., for length and time) up to which we can distinguish cause and effect.
 - ⁵ The Latin term simulacrum is derived from simul (“image, likeness, mirror image, dream image, idol, mirage”) via simulo (“similar, same”).

the realization that our planet is neither flat nor round but only a virtual construct, which is explicitly projected and rendered¹ into the perception field of the participants. Individual beliefs subtly determine the representation of the individual observer.

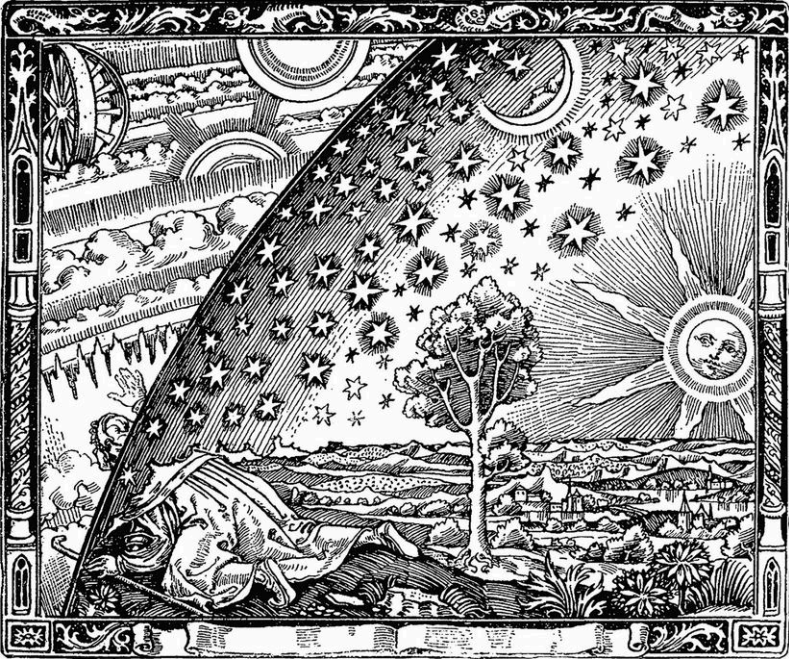

Plato's cave analogy: Is this reality just a virtual construct?

The model's cosmic joke is that the transhumanist masterminds of the World Economic Forum are working hard to transfer the human mind into an artificial neural field based on quantum computers. They advertise virtual immortality and the prospect of becoming a creator god in your own holographic construct, which they say is indistinguishable from "reality." The body thus becomes superfluous and is no longer needed. The latter allegedly produces too much CO₂ anyway. However, if one looks at the scientific data, everything points to the fact that we are already caught in such an analogous Simulacrum. If we were to get involved in this Faustian deal, then, according to the extended simulation theory, we would fall one step deeper into a virtual

¹ Individual representation is based on individual belief constructs.

prison. One must ask how many dream-within-a-dream levels we have already fallen and how to get out again.

What does this classical image want to convey—a dome or a simulation?

So much regarding the abstract ideologies and philosophies of the alternative scene, undoubtedly, one cannot complain about not being offered some variety. However, one should not speculate on finding unity among famous opinion leaders. With all these tunnels of reality, there are always new possibilities for interpretation and combination. Thus religious redemption narratives mix with ufology and Bible verses with quantum physics. But let's go back to the level of the "reasonable materialists" and look at the collective stage of international politics from this perspective. This realm already seems pathological enough. Indeed, it appears

so perverted that many critical minds fear “losing it” just by consuming the daily news for too long.

1.8 One Crisis Follows the Other

At the start of 2020, the System unmistakably showed its increased ambition to drive people from one crisis to the next. Those who dared to see it wasn't a coincidence but a deliberate orchestration, began to speculate about possible connections. This momentum gave rise to many new currents in alternative media. What had previously seemed halfway homogeneous as a subculture, with slight nuances in the speculative details, became a mass movement with countless breakaway groups.

The ever faster galloping succession of serious events suddenly left no time to analyze a topic comprehensively. While most people were still busy weighing up the pandemic and the vaccination issue, Ukraine had already burst through the door. Many people who recognized a general manipulation during the Corona era could not even form a final opinion about it. Some are still wavering between the popular theses, whether the imposed gene therapy was only a scheme to make a few people enormously rich or whether there was a hidden plan to transform global society? Is the statistically evidenced excess mortality since 2021¹ the unfortunate result of greed and incompetence, or was precisely this effect intended from the beginning? One could compare the discourse with the Mihap and Lihap thesis in the context of 9/11.

Even if one recognizes the intent to reduce the population behind the manipulation, the question remains about the more profound purpose. Was the complot all about slowing down overpopulation, or was the plan following a sinister agenda even to

¹ Data from Switzerland; www.infosperber.ch; Link: <https://tinyurl.com/38resd6r>

push the world's inhabitants below 500,000,000 as suggested by the Georgia Guidestones?¹ This monument brings us straight to the next puzzle. When this carved-in-stone symbol of population reduction was suddenly blown up, interpretations fluctuated accordingly in two general directions. The “Hopium addicts” saw it as a sign that God or the whitehats had destroyed the Guidestones to symbolize the end of that agenda. The rest primarily assumed that evidence had simply been eliminated here. Thus, the interpretive split continues to grow. So how should we understand this event? Anyhow, who cares? The monument's destruction is already yesterday's news since events—and seemingly time itself—are speeding up.

There were also very different interpretations when isolated goods disappeared from the world market, or foodstuffs vanished from store shelves in Germany from the beginning of 2020 until 2022. Aside from the official explanation, some saw it as a targeted supply chain attack, specifically on Europe. Others recognized the symptoms of a covert economic war between the Eastern powers—China in alliance with Russia—against the West. This picture later solidified when the Ukraine war's consequences manifested in an energy crisis. At the same time, however, it was impossible to ignore the fact that the saboteurs were also among the European ranks, without whose intervention, no escalation would have been conceivable. Is it all based on incompetence or a deliberate conspiracy? Reason dictates that we look for a mixture of the two extreme views. But there was no consensus on where to find a synthesis in the alternative scene.

¹ The Georgia Guidestones, (also known as Stones of Georgia or Markstones of Georgia) were a granite monument erected in 1980. An inscription of ten directives was carved into the massive stone blocks in eight modern languages ranging from English to Swahili. On the top were abbreviated versions of the directives in the four ancient languages of Babylonian, ancient Greek, Sanskrit, and Egyptian hieroglyphics. The most controversial commandment on the plaques read, “Maintain humanity under 500,000,000 in perpetual balance with nature”

The debates regarding the war in Ukraine are still emotionally charged. In contrast to the propaganda narrative of the West, according to which *Vladimir Putin* is a megalomaniac who would once again strive for a Greater Russian Empire, the alternative media in Germany maintained a differentiated view of the situation. The truther movement recognized that the West or NATO had spared no effort to agitate Russia and push it into geostrategic and economic isolation. As mentioned earlier, this started with the missile defense shield and NATO's eastward expansion and escalated with Syria, Libya, and the instigated color revolution in Ukraine. Let's not forget the conflicts in Georgia and other former Soviet republics, where Western intelligence agencies always had their fingers in the pie to attack and destabilize either Russia directly or *Putin's* partners. Unlike the mainstream, no analyst in the alternative media spectrum could duck these facts or ignore the covert operations that preceded the Ukrainian war.

Nevertheless, there was no unanimity. Although almost every commentator in the alternative spectrum knew exactly about NATO's role as an agent provocateur,¹ there are still emotional discussions today about how to evaluate *Putin* and his attack on Ukraine. First of all, the majority trusts in the authenticity of this conflict and assumes that Russia had no other choice. Accordingly, *Putin* had to show a clear boundary, which the West wanted to shift geopolitically further eastward. The Russian president could not back down without losing face. This argument was not sufficient among the strict pacifists of the alternative media. Hence, anyone who resorts to violence needs to be condemned. From the point of view of a small faction within the movement, there could have been a peaceful solution, which is interpreted as complete naïvety by the opposite side—and I am talking here exclusively

¹ Agent Provocateur comes from French and means “provocative agent.”

about the narratives within the alternative point of view. In the mainstream, *Putin* is basically always portrayed as the new *Hitler*.

The trench warfare in Ukraine reflects in the discussions within the alternative media—or vice versa. Many opinion leaders within the scene still praise *Vladimir Putin* as the last bulwark against NATO's agenda. Based on the nonconformist perception, this Western ideological construct, with the WEF at its spearhead, strives for a New World Order,¹ which wants to subjugate all countries under central control.

In contrast, Russia seems to prefer a multipolar world order. Still, even this popular view is softened within the alternative spectrum by voices such as commentators like *Ernst Wolff*, who recognize that *Putin's* Russia is also under the control of the World Economic Forum—and so is China.² As geopolitical laymen, we only wonder which analysis we should trust. Do we believe the narrative of *Thomas Röper*, who wholeheartedly represents Russia's perspective in the German-speaking world, or does the assessment of an *Ernst Wolff* sound more plausible? The German scene is once more divided in this fundamental question, and I am sure there are similar voices within the alternative media in most other Western countries.

¹ The term "New World Order" was coined by statements of *George H. W. Bush* and was also taken up again under his son in the context of 9/11. The alternative circles mostly understand this as an ideology according to which the world is to be brought under a centralized order. This ideology is also referred to as a one-world government or one-world order.

² *Xi Jinping* delivered a critical keynote speech at the WEF in Davos and was praised by *Klaus Schwab*. See "Plandemic 3" by *Mikki Willis*. Link: <https://www.imdb.com/title/tt27930696/>

1.9 Divide and Conquer

If we look at the development of the truth movement since 9/11 in summary, we can observe an exponential fragmentation of the scene. Although, at the same time, we see that more people than ever have “woken up” in recent years and started to question the mainstream narrative, this revolutionary potential is nevertheless split into many subgroups. As a result, no subdivision reaches a coherent critical mass that could be dangerous to the System. The adherents of the various alternative points of view are seemingly more concerned with engaging in argumentation among themselves than confronting the ruling caste. In any case, the population indoctrinated by the MSM hardly comes in contact with a critical perspective. At best, they receive fragments of the most abstruse theses torn out of context, framed,¹ and decorated in brown—in the German Nazi sense. Each MSM branch in every country uses a slightly different approach, yet, the underlying principle is the same.

I hope the last few chapters show how the alternative media scene has disintegrated. I do not intend to deliver a detailed damage report of the subculture. Instead, I want to postulate a targeted manipulation. Keeping a rough overview of which main narratives circulate in the alternative sector is hard enough. It would take enormous research to deal with all the currents in detail and analyze them without bias. Who has the time for that? That’s why most truthers remain in their compartmentalized reality bubbles—also called echo chambers. Even if a critical mass of the “awakened” would succeed in finding a consensus, there is still no feasible solution to deal with the infiltration by state-cont-

¹ Framing refers to the manipulative technique of confining a concept or issue within a limiting and tendentious narrative.

rolled agents of the right-wing milieu, who would color every new movement brown—or any other color of any perverted and controlled opposition. Moreover, the System is just waiting for radicalization to kick in to turn this kinetic energy into a catalytic momentum for the next phase of its agenda.

As a long-time observer who has followed developments closely, it took me many years to extract decisive insights from all those various narratives I could identify as facts. The respective opinion leaders of each division always interpret the rest. In the context of the escalation around the year 2020, I even took the time to delve into the perspective of the Q-movement. Of course, some partial aspects also coincide with my knowledge, but the final overall picture is questionable. Many basic assumptions within the Q-narrative derive exclusively from sources of unknown origins, which are supposed to come from the swamp of the intelligence community. Depending on each case, one can speculate whether the whistleblower who believes the narrative himself was “inoculated” with dubious data within his branch or whether the agent intentionally sells false reports as hot insider knowledge. Indeed, you could also blindly believe Q-style and “trust the plan.”

There are also gross contradictions within the interpretations of all the other dominant alternative commentators. In some cases, significant aspects are entirely ignored or unknown. The speculations formed from this are based on assumptions resulting from missing data and a lack of or exaggerated imagination. To give just one concrete example here, I take a fairly conservative view that *Putin* is supposed to be the antagonist of the WEF headed by *Klaus Schwab*. Accordingly, the forum is seen as a mastermind and string-puller behind the Western faction. This network stands for the ideological epicenter that indirectly controls NATO. If one asks a representative of this thesis why Russia never effectively supported the Western alternative media sector, then supporters of *Putin* argue with incompetence. Thus, even the

well-known German “Kremmeltroll”¹ *Thomas Röper* claims that the Russians are too “stupid” to work meaningfully with the alternative media. This statement happened during a “Tacheles” program with *Robert Stein*, when he confronted him with the question of where the Russian restraint came from.

Could we consider that a logical explanation? After all, it doesn’t take a genius to provide the German truther community with intelligence material, for example, in their ambitions to solve 9/11. In addition, some activists would have accepted financial support from Russia, which the MSM has attributed to them anyway. Yet it would be so trivial to use a little money and data to empower critical Germans to expose their government. They didn’t even try bumblingly. Even their mouthpiece, *Russia Today*, has never crossed certain lines regarding exposing Western corruption. Why? Blaming it on media incompetence is a flawed rationale. But this is only one of many examples of why some theses—that initially seem plausible—can only be upheld with dubious arguments when viewed critically. Russia’s behavior concerning the staged pandemic raises similar questions.

The logical consequence of such considerations would be the thesis that the alternative media’s idols and savior figures—from *Putin* over to *Trump* to *Q*—are used by the same System as controlled oppositions. But this conclusion is unacceptable and would jeopardize the daily “Hopium” supply. It is preferable to cling to the hope that at least someone is on our side.

Indeed, many inconsistencies can be wiped away with incompetence and coincidence. In the end, however, the multitude of discrepancies always makes some of the popular narratives of the alternative media vulnerable to critical discernment. In my

¹ “Kremmeltroll” (German for “Kremlin troll”) not meant disrespectfully, as *Thomas Röper* sarcastically calls himself this name and sees his job as being a counterforce to Western propaganda.

research, I tried to find one prominent theory that was utterly conclusive—to no avail. Add the fact that each significant current cultivates nuanced ideas about who is at the helm of the conspiracy and what is the primary intent behind the sinister machinations. Each famous thesis omits particulars or ignores logical inconsistencies. When I look at the division of the truth movement from the meta-level, I cannot avoid the thought that polarization is controlled and catalyzed with full intention. Again and again, I think of a quote that is attributed to *Lenin*:

“The best way to control the opposition is to run it yourself.”

This statement can be perfectly combined with another popular quote from *Lenin*:

“Only divided people can be governed.”

Vladimir I. Lenin at a speech during the October Revolution

I believe this “divide and conquer” principle is applied across the board—not only between the mainstream and the alternative views but also within each of these poles. While consumers of the MSM are deliberately divided into political and social castes, the truther subculture has also been separated into opposing camps. This fragmentation is subliminally orchestrated and fomented. The System uses intelligence agencies and think-tanks to implement a diversity of narratives. This theory can only be proven to a limited extent, and if so, then only by using isolated examples. Nevertheless, I postulate an organized manipulation carried out so subtly that the scene cannot substantially recognize it.

In addition, a large part of the alternative media is almost exclusively concerned with venting their displeasure. Of course, they also expose lies and manipulations. Still, they serve directly or indirectly solely the “outrage management.”¹ Unfortunately, the more profound questions and the search for the long-term intentions of the System often fall by the wayside.

In summary, my analysis of the development of alternative media is sobering. The truth movement has been shattered into numerous sub-narratives. This split allows no consensus other than agreement that the mainstream consumer is being manipulated and divided even more bleakly. Through mass media brainwashing, most people remain in a hypnotic deep sleep without questioning what is being presented. The complexity of the alternative narratives metaphorically bludgeons those who begin to awaken from this trance state.

¹ “Outrage management” (in German: “Empörungsmangement”) is a term coined and popularized in Germany by perception psychologist *Rainer Mausfeld* in the book “Warum schweigen die Lämmer?”. It is derived from the theories of *Edward Bernays*. In a roundabout way, it describes a manipulative technique of keeping criticism of the System within a limited framework and leading only to verbal ventilation instead of provoking an actual physical rebellion against the authorities.

The sheer monstrosity of the conspiracy outlined by countless explanatory models is challenging to grasp, and the enormous range of opinions among mainstream analysts about the fundamental background leaves little room for agreement on countering the control system. Thus, I can only assess the probability of a critical mass with a homogeneous voice emerging from this pot-pourri as extremely unlikely. Accordingly, a solution can only arise from the individual—not from a popular movement.

Suppose one wants to understand why so many analysts come up with such different interpretations and forecasts of the current situation—to do that, one must first differentiate the fundamental basic assumptions on which the various narratives are built. One of the most important aspects is how deeply the collective control system is interconnected.

CHAPTER 2 | THE SYSTEM

2.1 Bilderbergers and Co.

Of course, no universally accepted definitions exist of where mainstream opinion ends and alternative views begin, which we assign to the so-called truther movement. In fact, there are many overlaps. At the starting point of my “career as a truther,” we kept it relatively simple: If you no longer believed in the official account of 9/11, then you were one of us. Nowadays, team building is reduced to vaccination status. However, there are also a few vaccinated people who were able to realize after receiving the shot that they were manipulated by the state, WHO, and mass media in this regard to “safe & effective.”

Accordingly, we could define the truther scene based on a fundamental skepticism concerning politics, cooperation, and the mainstream media (MSM). In most cases, supporters of the truth movement assume that these instances are controlled by a hidden hand in the background. But regarding who owns this hand and how many institutions lie between the puppet master and the political puppets or the “presstitutes,” most truthers only have a blurred concept. Therefore, a small part continues to be vivified by the hope that not all factions of politics are controlled by an overarching System. They believe there is still potential for real change on the radical fringes of the party landscape. This optimism is primarily strengthened by the fact that there are politicians on these ends who express partially unpleasant “truths” and opinions that are equally prevalent in the alternative media. *Mr. Trump* is an excellent example in the American context.

Nevertheless, most alternative analysts have permanently abandoned this hope that politics can provide a solution to the overall situation. Despite this, ample attention continues to be paid to this sham or pseudo-democracy. This engagement ensues primarily with indignation and sarcasm. Thus, this exhibition is given a relevance that it doesn't deserve because it's practically just a stage play. But it does not end there. Out of hope and protest, some truthers continue participating in elections they no longer believe in. They symbolically cast their votes into an urn, legitimizing a system of control that the rulers never intended to serve the people. It is a tragedy and reminds me of the patterns of the Stockholm Syndrome.

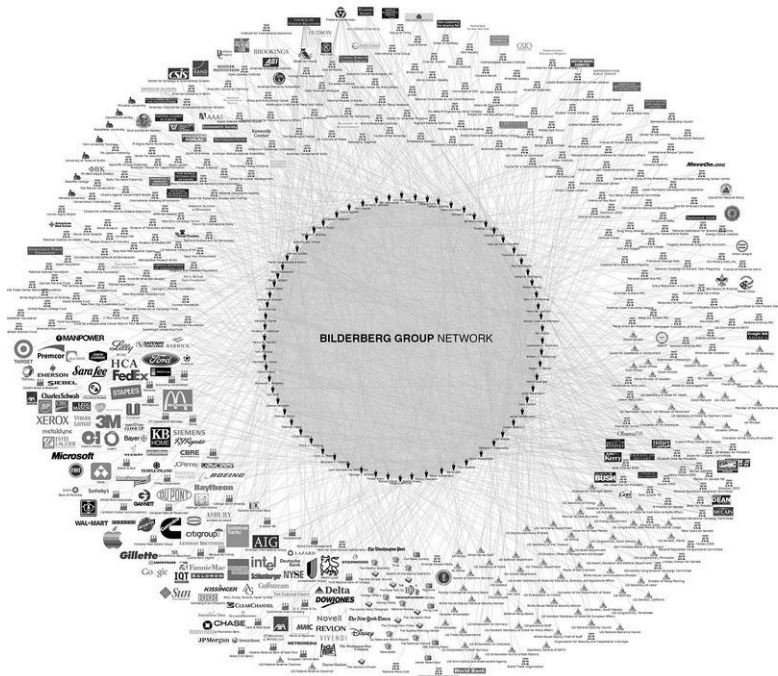

The well-known Stockholm syndrome describes a psychological mechanism whereby the hostages begin to believe and invest in their captor's "good" personality aspects. The same principle could be applied to the "sham democracy" control system. In Germany, representatives of these positive qualities are mostly projected in representatives of the AFD¹ or people like *Sandra Wagenknecht*.² However, this belief in elections is only marginal in the alternative media scene. The masses within the movement have sustainably recognized that all political systems, at least in the Western world, are dominated by structures that are not subject to democratic control.

For once, there is a broad consensus within the scene on where this architecture could be located. For many years, the alternative media have identified the epicenter of power within well-known think tanks and elite groups, such as the Bilderbergers, the Council on Foreign Relations, and the Trilateral Commission. There are debates on how powerful they really are, though. On top

¹ Comparable to the ultra-right-wing faction of the Republican party in the U.S.

² A left-wing politician who is comparable to *Ralf Nader* in the U.S.

of that, with the onset of the coronavirus pandemic, the World Economic Forum moved into the international spotlight—the importance of which had only been acknowledged by a few analysts. I have outlined this status quo in the previous chapters.

Network of the Bilderberg Group

Recognizing these organizations as clandestine centers of power behind the democratic façade is not too difficult once one has broken out of the mass formation psychosis transmitted by MSM. Attentive observers can see that key political figures promptly take up and propagate new impulses from these institutions. We can frequently observe how individuals who, for example, were chosen by the Bilderberg Group to participate in their exclusive meetings made fantastic career leaps a short time later.

*Ursula von der Leyen*¹ and *Bill Clinton* are classic examples. The incredible density of media moguls and industrial and economic magnates in the ranks of these organizations bundle enormous might to catapult, for example, politicians in their favor to the highest positions. Moreover, they have the media leverage to continually give their lackeys a benevolent press and destroy their opponents with just one editorial.

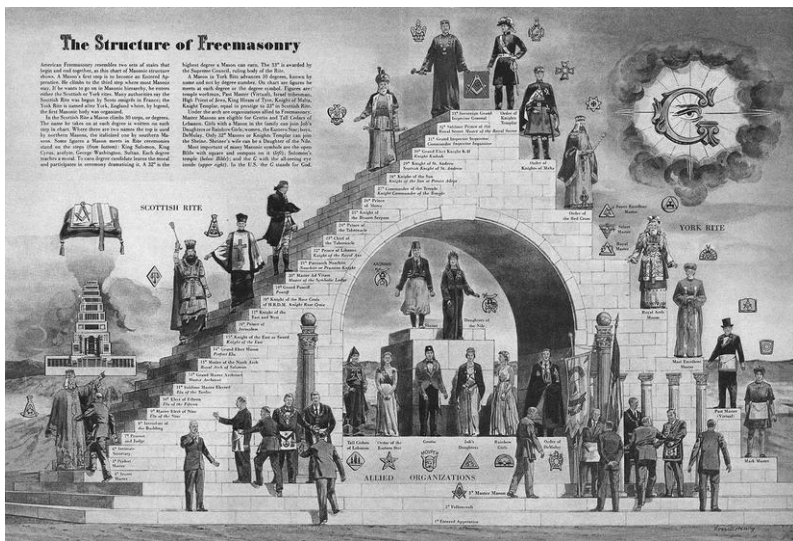

The core of this thesis is that all Western democracies, including countries like Japan, South Korea, New Zealand, and Australia, are controlled by these networks—that might even be understood as one overarching structure. Since most organizations' membership lists and central intentions are not even exceptionally secret and, in part, openly accessible, there is little doubt about this interaction. However, the mainstream does not communicate this fact to the masses. In alternative circles, this realization that such non-democratic centers of power control politics is omnipresent. This assumption is the core thesis from which most further “conspiracy theories” derive. But it still becomes substantially more complex.

2.2 Secret Societies and Beyond

Where exactly do the numerous other influential groups fit into the overarching network? Who controls the Military-Industrial Complex, the Club of Rome, the Jesuits, the Muslim Brotherhood, or the many intelligence agencies? Where do the bankers and their family dynasties stand in the pecking order? What power do the internationally operating secret societies have, from the Freema-

¹ *Ursula von der Leyen* was invited to the Bilderberg Conference in Montreux, Switzerland, in 2019. Shortly after that, she became EU president under conspicuous circumstances.

I am convinced that we are dealing with a central non-human intelligence. But this is only my opinion, which has condensed in me as essence from the occupation with the topics and many years of confrontation with the System’s interconnectedness established the perception that an ominous power permeates all institutions and ideologies—even those that appear to be diametrically opposed. Analysts such as *Jordan Maxwell* and *David Icke* have spent decades penetrating this network and describing the occult architecture of the power pyramid. Nevertheless, even they had to correct their models repeatedly because their research continually produced new data, and they realized that they were deliberately fed with half-truths and false leads.

The Structure of Freemasonry

How much power do the occult, esoteric brotherhoods have, and who or what controls them? There lies a tremendous psychological or even spiritual barrier many alternative groups and analysts cannot overcome. There are numerous reasons for this. For one, the interconnected subject areas are incredibly complex, but it

also takes some imagination to allow the thought that a singular power may have infiltrated all significant Earthly structures. For most people, this concept is too mindblowing.

Furthermore, many opinion leaders are also concerned about jeopardizing their reputations, venturing into such philosophical terrain outside the realm of objectivism. In this context, one can hardly prove anything in the classical sense. Only recurring patterns can be identified, hidden in a gigantic data set of anomalies pointing to an intelligent spider web of control.

In addition, there is the logical question of the mental power it would take to coordinate such a vast network. Who or what resides at the top of the pyramid? Could human beings even control that, or do we have to assume extraterrestrial, inter-dimensional, or spiritual entities here? Could it even be an artificial intelligence that has its fingers in the pie, who out of a higher operational level orchestrates the Simulacrum? The latter would explain how the System can control without personal ideological preferences or emotional and ethical boundaries.

Suppose you leave the thesis of a multipolar world with competing ideologies and geostrategic power games by accepting these collective phenomena as a mere stage play for the masses directed by one singular intelligence. In that case, you get a reasonable explanation why, for example, all significant players on the global stage have participated almost uniformly in the Corona hysteria. Still, in the end, you are always left with more questions than answers. Don't worry: I will develop a comprehensive model in a 2nd book later on—but we are not there yet.

At this point, it is sufficient to accept that a fundamental split exists within the alternative paradigm. Some see only chaos and “human drama” behind the known conspiracies. They are in the majority. The other faction located an overarching intelligent plan behind the global scheme that goes far beyond principles such as money and power. It is perfectly fine if you, so far, have not been

able to abstract the idea of a central power structure or you could not confirm it in their perception. For now, it is enough that you recognize a spectrum of narratives within the truther movement based on the assumption that the manipulation goes much deeper than is generally considered.

The Phoenix Hypothesis postulates that a superior intelligence controls thesis and antithesis according to Hegelian dialectics to synthesize its agenda. Nevertheless, you don't need to conform to this notion to understand my model. However, it might be helpful to open your mind to this assumption. Try to allow for the hypothetical idea that the division in East vs. West, Right vs. Left, Liberal vs. Conservative, Religious vs. Atheist, Poor vs. Rich, Male vs. Female, Black vs. White, etc., is being purposefully instrumentalized by a powerful intelligence to control the masses.

I am aware of how radical this view may sound at first. Even most self-proclaimed "conspiracy theorists" cannot abstract this idea. So I also had difficulties with it initially until I had to accept this as a fact based on my research and the reoccurring pattern I could no longer ignore. Besides, such a hypothesis implies innumerable questions, which I could not answer without further ado. But at this point, a general openness to the thesis that the System is an internationally networked structure that unites even apparent antagonists or even geostrategic counterparts under one overarching agenda is sufficient to move on.

CHAPTER 3 | THE MISSING PIECE

3.1 Indications of an Overriding Agenda

Even if one finds it difficult to recognize that a superordinate structure exists and that all the critical pawns on the world stage are thus coordinated equally, one still has to wonder about the uniform Corona pandemic. This anomaly is especially telling if one can imagine that this collective stageplay was entirely organized, at least in the West. Although, in the beginning, Russia's reaction was extremely reserved and hesitant, they nevertheless played along. The Chinese even initially staged themselves as the main protagonists to fuel the hysteria—they were the origin. If these two great powers are geostrategic competitors of the West, why are they dancing along almost synchronously concerning Corona?

While most commentators within the alternative media agree that the pandemic was merely a media bogeyman primarily instrumental in injecting a highly questionable gene therapy into people, Russia was also involved in the theatrical exhibition. Although their Sputnik vaccine still enjoys a better reputation among alternative analysts compared to the West's mRNA concoction, Putin's fundamental approach was indistinguishable from the Western methodology. We can see a similar alignment in China, as they also responded with mass inoculations. But how much do we know about the juice they administered? Ultimately, the Sputnik vaccine might fulfill the same function as the West's gene therapy. Did the Russians warn us about the staging of this event? No, there was no perceptible criticism of the Western

course. Did their intelligence agency (FSB) not know what was going on?

Suppose we are to take the international reaction to the “P(l)andemic” as an indication that all the protagonists, including China and Russia, were clandestinely involved in its realization. In that case, we must consequently ask ourselves where there might be a consensual interest among all the leading players. Is there a common challenge they can only overcome if they are united?

In this context, over the last 20 years, I have encountered a complex of issues that I have noted but constantly pushed to the periphery of my perception. Admittedly, I treated those anomalies as the majority in the truth movement prefers it until today—not only in Germany. So let’s toss our ignorance overboard and dive deep into them—shall we?

3.2 A Neglected Complex of Topics

The body of related topics I need to add to the overall picture revolves around the thesis that Earth is transformed cyclically—a geophysical restart approximately every 3600 years. Accordingly, the “Great Reset” is of cosmic nature. The overarching notion derives from many different fields. First, I like to outline the concept before I argue about why I believe it is a solid puzzle piece almost everyone is missing and what sources convinced me to recognize it. Therefore I will describe the geological transformation for the time being only in such a way as I have understood it up to now.

According to many international analysts, the upcoming event is an abrupt catastrophic shift of the Earth’s mantle, as postulated

and argued first by *Charles Hapgood*¹ as early as 1958. Also applicable is the term pole shift, which first occurs magnetically and later manifests physically—so the physical pole areas relocate. According to this theory, after the magnetic pole reversal, the outer layer of the Earth moves like the detached skin of an orange around the Earth's core. In our analogy, this core is symbolized by the fruit's flesh. The unanimous interpretation among independent analysts predicts we are on the verge of another cycle. The pole shift is expected chiefly between 2030 and 2047, although the current movement of the magnetic pole might suggest an earlier date.

The consequences would be devastating. This sudden translocation of the crust and the inertia of the water and the atmosphere will cause gigantic tidal waves on all world coasts in combination with catastrophic winds. In addition, the abrupt displacement of the Earth's plates triggers global quakes and volcanic eruptions at the collision zones. From the traditions of ancient cultures and geological observations, we know that isolated Earth plates are lifted, and other parts of the Earth are lowered. Hence, new lands will emerge, and some regions will disappear under the sea's surface. We are dealing with a cataclysmic² Earth transformation that leads in an extremely short time to a redistribution of the climatic zones.

Let me clarify: The pole shift is not the end of the world! According to all evidence, humanity has survived this scenario several times—it is a cyclic event. Nevertheless, the occurrence is a natural killer for advanced cultures. This mechanism can be grasped in the fact that many civilizations before us may not have had cell phones but could stack stones with such precision that we cannot reproduce their architecture to this day. They disappeared

¹ "Earth's Shifting Crust" by *Charles Hapgood*; see appendix

² The term cataclysm or cataclysmic event refers to an all-destroying catastrophe.

suddenly with all their knowledge. What these advanced civilizations brought down may also set back our development for centuries. The tidal waves alone would ensure that we would have no international trade for years because all ports would be destroyed almost simultaneously. In addition, the pole shift is associated with massive coronal mass ejections¹ from the Sun that would destroy our susceptible technology which could disrupt communications and power for many years. For this, imagine the Carrington event² squared. This sequence of occurrences could reduce the world's population by more than half in a very short time, and even the survivors would suffer further losses in the medium term due to infrastructure collapse before humanity could stabilize again.

This potential event is almost entirely excluded from the discussion about a holistic understanding of collective processes. That the mainstream ignores the pole shift should not surprise us, but why is the alternative media almost silent about this fact? Is there no credible data about it? Perhaps the truthers are too distracted and, therefore, can't see the forest for all the trees? Could the awareness of this connection promise too little "Hopium?" Why is there no severe endeavor to cover and investigate this crucial puzzle piece?

Neither the Q-movement nor the "reasonable realists" discuss this scenario. If at all, then it is the esoteric groups that speculate within the framework of the available cycles of the Sun, the Vedic

¹ A coronal mass ejection (CME) is a solar flare (an eruptive prominence) that ejects plasma.

² From August 28 to September 4, 1859, several massive solar flares occurred, observed by astronomer *Richard Carrington*. In the higher latitudes of orthern Europe and North America, such high voltages were induced in telegraph lines that strips of paper in the receivers were set on fire by sparks. The function of the worldwide telegraph network, which had been installed shortly before, was massively impaired.

Yugas¹ and in the context of the Mayan calendar² about whether cosmic influences could initiate a leap in our consciousness. This assumption doesn't need to be false but largely ignores the mundane level. Fortunately, a growing international community is waking up to this and compiling the available data. But this process is still in its infancy in the German-speaking world. Since the most critical data sets are only available in English, a language barrier can therefore be argued as an obstacle. Nevertheless, it is primarily psychological reasons that dominate German reticence.

I will explain the main arguments for a pole shift scenario in detail in the 5th chapter of the book. If you have never been confronted with the hypothesis of an Earth's crust displacement and consider the subject a pipe dream, then you are welcome to skip a few pages to convince yourself that this is not the case—quite the contrary! The available data sets should demonstrate conclusively to even the most “reasonable realists” that they should not ignore this aspect if they want to fathom the bigger picture of global development.

In the present phase of my Phoenix Hypothesis presentation, it shall be sufficient to roughly describe the scenario in its physical manifestation and mention the essential indications that make the subject relevant. Let's start with a marginal phenomenon in the context: the prophecies.

¹ Yuga (Sanskrit युग yuga, n., [jugə] “period”) is the term for the four world ages in Hinduism. It is based on the idea that existence is subject to an ever-repeating process of becoming and passing away.

² The Mayan calendar, as an astronomical calendar, is the historical calendar system of the Maya. It is the most developed calendar of the Mesoamerican natives.

3.3 Ignored Visions of the Future

In my experience, most truth-seekers in German-speaking countries have touched on the “pole shift” topic due to European prophecies. Unfortunately, the phenomenon is rarely recognized as such—we are only confronted with various catastrophic effects that are supposed to happen, which sound unbelievable to most people. Since the precognitive people in Europe have drawn a homogeneous vision of the future in the essential core points, many skeptics assume that all seers must have inspired each other—eventually, they got their ideas from religious prophecy. At the same time, most seers were plain personalities and partly illiterate or even blind. Therefore, it is hard to believe that they were copying each other.

Therefore, one could also postulate that the seers received the same vision and were only confronted with varying focal points. In addition, the message can be interpreted differently at alternating time epochs with alternating socialization. Nevertheless, 80-90% matching of the general storyline is unmistakable in the prophecies. This congruence is still valid if we include the international divination and the predictions of the Hopi Indians in the analysis.

*Alois Irlmaier*¹ is the best-known seer in the German context and can be considered a comprehensively documented representative of the European prophets. All significant authorities researching Europe’s clairvoyants recognize him as an essential source. Therefore, it is unsurprising that many truthers in Germany have heard about his detailed prophecies of a World War III in Europe. Similar could be said about *Edgar Cayce* in the Anglo-American context.

¹ see appendix for more information on *Alois Irlmaier*

As I described earlier, *Alois Irlmaier* was already a topic among my fellow members of the Magdeburg Peace Vigils in 2014. If one brings up his name, his persona is associated with the warning that Russian troops will suddenly attack German territory, and already there, many people turn away with a shudder. This notion often destroys the positive vibe, and with *Putin's* forces now much closer to the border with Germany, the subject becomes even more uncomfortable than it was in 2003 when I first got confronted with his harrowing forecast.

Even ten years ago, *Irlmaier's* visions could still be dismissed as far-fetched. Still, at the latest, from the perceptible deterioration in NATO-Russia relations around 2014, European prophecy could no longer be so easily refuted with logic. In addition, the visions, which in *Irlmaier's* case date back almost 80 years, already speak of technologies that have first appeared in recent decades—his precognition ranges from cell phones to “unmanned flying objects” or drones.

Many truthers fail to realize that the prophesied conflict in Germany is supposed to be short-lived and will only last a maximum of three months. Before nuclear escalation can occur, warfare will be interrupted by a series of cosmic and geophysical events culminating in a phenomenon of three days of darkness. This core evaluation is coherent with *Edgar Cayce's* forecast, which sustains a comparable reputation as *Irlmaier's* legacy owns in Germany.

According to the prophecies, the world will return to the technological period of pre-industrialization, lasting many years, as *Irlmaier* describes it. A few decades later, at the earliest, high technologies are said to reappear slowly. In addition, a severe climatic change is found immediately after the event, described as happening instantaneously. *Irlmaier's* picturesque descriptions indicate that Germans would have temperatures and vegetation

like in southern Italy. Thus palm trees, lemons, and oranges would be cultivated in Germany.

The European prophecies precisely depict the symptoms of a cosmically induced pole shift or, as you could say, an Earth's crust displacement. While seers like *Edgar Cayce* used precise terms to name the event, people like *Irlmaier* could merely describe the effects of a crustal displacement. Most people who have studied the European predictions can no longer rule out the prophesied conflict with Russia in the current geostrategic context. Yet many analysts still shy away regarding the geophysical aspects of the forecast. Apart from that, most people who locate themselves firmly in a 4-dimensional space-time paradigm have fundamental problems with even imagining that precognition is possible. For the "reasonable materialists," the prophecies are, as a matter of principle, no argument. They are mostly unaware that science has been working with information structures outside the space-time continuum for a long time. For example, these higher dimensions are needed to explain nonlocal phenomena like the EPR-paradox.¹

3.4 The Flood as a Symptom

The prophecies are the most tangible sources regarding a future pole shift currently circulating in the alternative spectrum in Germany. Unfortunately, this source is also the most unbelievable. On the other hand, it is far less known that we have impeccable scientific evidence with which this cataclysmic transformation can be argued. Accordingly, there is hardly any awareness that a cyclic

¹ EPR stands for Einstein-Podolski-Rosen paradox. Since the EPR work (1935), Einstein persistently pursued until the end of his life (1955) the goal of completing quantum mechanics in the sense of EPR. His basic assumption remained that quantum mechanics by itself contradicted "common sense" ("God does not play dice"), which is not surprising if one restricts his worldview to four dimensions. See appendix: "non-locality"

Earth crust movement has repeatedly taken place in the past and that there are clear geological and mythological indications for it. Thus, we find the tradition of a gigantic flood in the records of hundreds of ancient cultures around the globe.¹

The Deluge in a painting by *Kaspar Memberger the Elder*

There must have been a worldwide cataclysmic event that left its traces in the myths and geological strata. The Christian story of the deluge and Noah's Ark, as the global cataclysm is described in the Bible, comes from much older sources such as the Gilgamesh

¹ *Hans S. Bellamy*, in his book "Moons, Myths, and Man," speaks of 500 flood myths of about 250 peoples and tribes; Wikipedia can list about 70 sources. Link: https://en.wikipedia.org/wiki/List_of_flood_myths

Epic.¹ This mythological-religious account fits perfectly into the canon of a worldwide catastrophe that is said to have raged particularly acutely some 11,000 - 12,000 years ago.

Science studies have found clear indications that a severe transformation occurs approximately every 3,600 years on Earth. Climatic zones have changed abruptly, advanced civilizations disintegrated, whole spectrums of animal species disappeared from specific regions, and we find remains of tropical plants in today's polar regions or fish skeletons on mountains far away from the coasts. All these transformations occurred, not only in the geological sense, in an extremely short period, but probably took place within days—at least as far as crustal movement is concerned.

The outer mantle seems to have shifted cyclically by 90°, each time triggering cataclysmic effects. How else could we explain that palm tree remains are found in the South Pole region while we had ice ages in other areas—like in North America which disappeared under a thick ice layer? We must assume that Antarctica was closer to the equator not so long ago. Later in a dedicated chapter, I will give detailed overview of the scientific facts and anomalies, already documented in 1958 by *Charles Hapgood*, who got supported by *Albert Einstein* in his thesis. Both scientists were convinced that a cyclic Earth mantle shift was the only logical explanation for such phenomena. Until *Einstein's* death, both men maintained conversations on the subject and debated the possible triggers.

¹ The Epic of Gilgamesh, or Gilgamesh Epic, is the content of a group of literary works that originated primarily in the Babylonian region and contained one of the oldest surviving written poems. The Epic of Gilgamesh, in its various versions, is the most famous work of Akkadian and Sumerian literature.

A homogeneous overall picture emerges if we add the whole cosmos of whistleblowers and remote viewers¹ to the argumentative pool. According to these insiders, a part of the highest power structure not only knows that a pole shift has occurred in the past but prepares itself for the fact that such an event is inevitable within the following decades. But, to arrive at such an assessment, one must first do some homework. The raw data is hidden in all sorts of places, and the usual search engines are programmed to hide the essential pieces of the puzzle. Even if you know exactly where to look, this knowledge pool is saturated with purposefully scattered misinformation and half-truths. The pole shift is definitely a challenging topic.

Before we venture argumentatively onto this battlefield, let us accept the potential future Earth crustal displacement as a hypothesis—a possibility. Let's take the near future pole shift as a plausible scenario to play around with. If we agree to proceed with this concept, we can seriously ask ourselves how the System would respond if such a cataclysm were a reality. Would the intelligence at the top of the Earthly power pyramid, whoever or whatever we presume behind it, ignore the facts and take its chances? That is rather unlikely. Doesn't it make more sense to suppose that the System is preparing itself in secret and would tend to view the catastrophe as an opportunity to remake the world from scratch according to its ideal? The question of secrecy is significant: would the System let humanity know about it and risk a panic, or would it try to hide this critical piece of the puzzle as much as possible under a mountain of lies? I suspect the latter.

¹ Remote viewing or remote perception is a term for a particular form of clairvoyance, a hypothetical type of perception. From the mid-1970s, parapsychological experiments were sponsored by the U.S. government and subsequently continued under secrecy.

If you also answer these questions as I anticipate, then you can imagine that the pieces of evidence for this thesis will not fall so easily into your lap. You can presume why the topic maintains a shadowy existence even within the alternative media coverage. You may even ask yourself whether you want to know this so precisely—since your subconscious mind may anticipate that a confrontation with this reality implies enormous psychological consequences. Let's get into this purely playfully for the time being.

When I was repeatedly confronted with the possible consequences of a pole shift, I initially asked myself, what would I do if I were in charge? Me being the System, I can tell you one thing right away: I would not announce the pole shift in the daily news. Otherwise, we would already have Pandemonium¹ in the streets by tomorrow. The Corona crisis showed me how maturely and thoughtfully the masses react to existential threats. I hope you perceived my sarcasm in the last sentence. In this regard, I am completely disillusioned. Therefore, I am convinced that the System also has quite realistic conceptions about the dynamics at work in a society confronted with an impending disaster without being able to take refuge in a mental construct of hope. Therefore, one must ensure that the collective consciousness is not pushed face-first into the facts. The rest is taken care of by the internal Bergsonian filters², which protect the individual unconsciously from being confronted with realities for which he is not ready to cope.

¹ Pandemonium or, more rarely, Pandaimonion stands for the totality of all demons or their abode; generally a place of horror.

² *Henri Bergson* (1859-1941) was an influential French philosopher who studied psi phenomena extensively and developed a “filter” theory of consciousness from them. His books were frequently reprinted, and in 1927 he was awarded the Nobel Prize for Literature.

CHAPTER 4 | THE CONSEQUENCES

4.1 Fundamentals of the Phoenix Hypothesis

The core of my Phoenix Hypothesis is based on the premise that the main agenda of an internationally and supranationally operating elite is determined by an imminent cataclysm. A cyclical pole shift could explain many of their odd behavior. Since I will illuminate the arguments for such a scenario in the following main chapter, let us regard the possible situation as a purely strategic mind game. So we take the catastrophic consequences of an Earth's crustal displacement as a hypothetical challenge to a collective community of states. Then we should see how the picture can be reconciled with what has happened on the world stage in recent years.

However, to portray the scenario precisely, I need to define a few basic deductions for the model. These considerations arise from the data and research available to me. Accordingly, I forestall relevant conclusions. To this end, I will only mention the key points that emerged from my analysis without detailing the reasons, which will be discussed later in the argumentation section. For example, the available source material suggests that the scientific elites received unquestionable evidence by 1990, at the latest, that such a pole shift would be imminent in the next 40 to 60 years. On the other hand, the cyclic occurrence and the subsequent consequences of an Earth's crustal displacement had

already been known to the System at least since 1948 due to the findings of Project Nanook.¹

At the same time, I must clarify that many secret societies and the inner core of religious brotherhoods, such as the Jesuits, have always known about the cycles for a long time. Therefore, presumably, utterly independent of scientific investigations, they knew about the implications far in advance. Whether the various occult circles could preserve the secret knowledge of the exact calendar is speculative. The fact is that our current Gregorian calendar is highly manipulated. *Pope Gregory*, whose name the present dating system is based on, was merely the last manipulator who turned the clock.

Therefore, the pole shift may happen precisely on December 21, 2012, as it was often colported in the run-up. The only question remains: in which year are we today? What is the actual date if one would deduce the calendar manipulations from the counting? Again, this aspect is highly speculative, but I assume that an elitist core has correctly preserved the time calculation and can predetermine exactly when the critical phase begins. A similar problem arises with the manipulation of the phases of the moon. Numbers are clearly encoded in the names of the months, but they no longer correspond to today's order. We all know an octagon has eight corners, but October is the 10th month. From the Latin languages, we can deduce that September must be assigned conspicuously to the seven, but nowadays it comes on place nine. This shift of two months can also be recognized in December, which should stand for the number ten, but is assigned today to the 12th month.

¹ Project NANOOK was a United States Cold War reconnaissance project that used the first RB-29 for mapping and visual reconnaissance in the Arctic and along the northern Soviet coast. Clandestinely, it also served to reconnoiter disaster cycles.

I intend to avoid correcting the calendar or discussing alternative theories. Still, we must acknowledge that there was a massive manipulation in this domain, and we must regard all time predictions, wherever they may come from, with skepticism. Likewise, however, we should assume that isolated occult-esoteric secret societies have used the key of time calculation to generate an advantage for themselves. From this, we can deduce that the preparations for the pole shift started long before the scientific evidence was available. Possibly the whole agenda of a “New World Order” or “Novus ordo seclorum,”¹ as it is written on the dollar bill, is older than most people consider.

The Great Seal on the Dollar bill: “Novus ordo seclorum”

¹ Novus ordo seclorum (also saeculorum; Latin for “a new order of the ages”) is one of the two mottos on the reverse of the Seal of the United States. The motto to be read at the top is Annuit coeptis (Latin for “He is favorable to our undertakings”), with the Eye of Providence above an incomplete masonry pyramid in between.

Identifying the secret groups informed about an essential core of future events, I see three different coalitions there. These do not necessarily follow a completely homogeneous agenda. First of all, many whistleblowers come from the military context. These insiders have understandable intentions if we trust their internal narrative. According to members of this faction, their primary concern is to ensure humanity's survival and the preservation of technological achievements. From history, we know that this knowledge has always got lost. They try to prepare people and materials to survive the critical period within the scope of their possibilities. Inside this faction, one might reasonably suspect a few altruistic characters.

I identified another initiated group in the spectrum of known elites. Strikingly, certain billionaires like *Jeff Bezos* and *Elon Musk* have been involved with space travel for years. Are they trying to escape from Earth? These people have also been building underground projects and private bunkers. New Zealand is a favored place in this regard. From this, we can conclude that the highest authorities have either initiated them or these wealthy entrepreneurs have the means to recognize the situation themselves. We cannot rule out the possibility that the System facilitated their careers and made them possible in the first place, thus forcing them to play their part in the preparation process. Nevertheless, there seems to be some competition among them regarding the optimal starting position, which could be just for show.

There remains the last leading group that I could identify: the brotherhoods! These occult-esoteric secret societies have always kept the enigma of the cycles. For example, they extracted rare manuscripts from the great Library of Alexandria—moved them to the secret archives of the Vatican or into private collections to isolate the exquisite knowledge from ordinary people. Perhaps they also found additional information in the numerous temples of a past advanced civilization. These brotherhoods regard the cycle not only as a tumultuous cataclysm but also as a catalytic

opportunity or predestination to bring the world into a new age. Their New World Order is supposed to rise like the Phoenix from the ashes of the old civilization. Just as in Mandarin or the I-Ging, the same character is used for the terms “opportunity” and “disaster.”¹ Chinese linguistics reflects a deeper underlying philosophical assumption also present in secret societies. Accordingly, every supposed misfortune must be understood as an opportunity for a fundamental evolutionary process.

All these three primary core groups that know about the geophysical process may have different intentions and priorities. Their individual approaches differ from each other. Nevertheless, all parties are in complete agreement on one matter, and that concerns secrecy. No one wants the collective to be directly informed about this. A premature panic could cause dynamic chain reactions that, in the worst case, could tear the global social structure into shreds. Therefore, the world could descend into chaos even before the official due date.

Consequently, even the most benevolent humanitarians in the military must not allow the public to find out. They would also like to use their time until the last minute to advance the preparatory measures further. For this to happen, society must function because ordinary people operate all that critical infrastructure on which efficient preparation depends. For this reason, we can assume extensive secrecy. In the military, these issues are declared “Cosmic Top Secret,”²—in the Vatican, such knowledge is classified under the “Omega” level of secretiveness. Nevertheless, an agreement allows individuals wholeheartedly searching for the

¹ *John F. Kennedy* already noted this with some amazement: “The Chinese use two brushstrokes to write the word crisis. One brush stroke stands for danger, the other for opportunity. In a crisis, one should be aware of the danger but also recognize the opportunity.” Link: <https://tinyurl.com/5akxjr9z>

² “Cosmic Top Secret” is the highest level of confidentiality within the Western military (NATO) and intelligence agencies.

missing link to know about it as well. I could not have written or published the book without this confidential clause.

As I have already touched upon, all my sources indicate that the System has always kept the knowledge of the cycles confidential. Within secret societies, this is ensured through the degrees of initiation. This hierarchical discretion works like the military “need-to-know principle”¹ in the sense that only the highest ranks receive a comprehensive picture. Towards the bottom, the information is thinned out and trimmed increasingly. Each instance in the hierarchy is only aware of what it needs to know to fulfill its function.

Moreover, the additional regulation in the military is that reductionist narratives are invented for the lower ranks not to raise critical questions—moral issues that may make the soldier in the field hesitant to pull the trigger. In addition, the principle of “staggered narratives”—meaning that different hierarchies within agencies receive a slidly modified or watered down story—makes it easier to determine from which level a data leak (for example, by *Julian Assange* and Wikileaks²) comes when something goes public through so-called whistleblowers. The varying details make it easier to narrow down the potential group of people with loose lips. This method allows the System to target the mole unerringly.

¹ The need-to-know principle (knowledge only when necessary), also called the necessity principle, describes a security objective for classified information. Even if a person has access to data or transmission of this security level, the need-to-know principle prohibits access if that person does not directly require the information to perform a specific task. Among other things, the principle is one of the fundamental concepts for the internal workings of intelligence agencies.

² WikiLeaks from Hawaiian wiki “quick” and English leaks, is a disclosure platform founded in 2006 to anonymously publish (whistleblower) documents that are restricted in their accessibility by secrecy, confidentiality, censorship, or otherwise.

I will explain in detail how, in times of the Internet, anonymous whistleblowers, and independent researchers, tacit knowledge about the pole shift does not reach a critical perception threshold. But for now, let's assume that no effort is too laborious to control the collective consciousness and its narratives, as I described earlier in the context of the division of the alternative media. If we believe there is a way to conceal the pole-shift narrative from the public, how would we accomplish that? Where would the money come from, and what preparatory measures can I take to initiate a controlled reboot? Those would be the primary questions I would ask myself if I put myself in the role of the System.

4.2 Clandestine Fundraising

Suppose we first imagine that we are in the shoes of the System, regardless of whether we locate ourselves primarily in the leading minds of the military, the wealthy elites, or even the occult fraternities. In that case, we cannot move anything without a special "relief fund." First, we cannot make conspicuous investments out of public accounts such as state budgets. For example, we can't just buy millions of life jackets with a disaster relief budget. Some control authorities might ask awkward questions. So we need billions, trillions, or better yet, quadrillions of dollars and euros sitting in black accounts—funds that cannot be checked or questioned by any government controller.

If we look at the last few decades, there should be little doubt that the rulers of the global economy have chosen a course that inevitably leads to the financial abyss. The Western "democracies" have produced exponentially growing mountains of debt that no generation can repay. No matter where you look, the System is based only on financial bubbles that could burst anytime. The central banks are practically generating money out of thin air, and a substantial portion of the capital is seeping away somewhere

along the line. Of course, there are certain groups of people who have built up conspicuous private fortunes within that process, but these are comparatively peanuts that serve as hush money. Much of the skimmed-off profits end up in black accounts via concealing financial operations. This procedure is possible because the entire financial system has become so opaque and complex that even experts with decades of experience can no longer fully explain the mechanisms. Accordingly, many analysts wonder why the financial market did not implode years ago.

Anyone wondering when the big inevitable crash will finally occur, should consider that a more extended System completely controls this financial system. It is artificially kept alive until the cosmically induced reset comes. Until then, its primary purpose is funneling funds into black channels without humanity fully realizing the tremendous skimming. The supreme architects of this intrigue are not racking their brains as to how to repay the debt because they know that everything will be set to zero with the pole shift as the cosmic “Great Reset.” Thus there will be neither debtors nor creditors anymore. If, nevertheless, a tremendous financial crash should occur in the coming years, it will probably only happen to signal the next phase of preparation and serves to consolidate resources.

Many books¹ have been written about the great paradoxes of international finance, but let me cite a few well-known schemes of how considerable amounts of money have ended up in dark channels. The anomalies around September 11 are very conspicuous. Here I do not even mean the put options² in the run-up to

¹ E.g., *Confessions of an Economic Hit Man* is a 2004 autobiographical book by *John Perkins*.

² In the days leading up to September 11, 2001, unknown persons bet en masse on sharply declining stock prices of the affected airlines, banks, and the two most affected reinsurance groups, generating significant amounts of money.

the tragedy or the tons of gold¹ that disappeared there—these assets were stored under the World Trade Center and were never found after the collapse of the Twin Towers. Primarily, I refer to the press conference of *Donald Rumsfeld*, which took place on September 10, 2001. There, in his position as Secretary of Defense, he had to declare that he could not trace \$2.3 trillion² that had vanished from the military budget in recent years prior to 9/11. *Rumsfeld* explained that he had turned over the relevant spreadsheets to a Pentagon commission already working restlessly to find the black holes in the defense budget.

The aftermath of the 9/11 attacks at the pentagon.

2.3 trillion (2.3×10^{12}) U.S. dollars are indeed only a drop in the bucket if one wants to finance clandestine measures that serve to prepare for a pole shift. Nevertheless, we are still dealing with a considerable amount. About \$7,000 could have been given directly to each U.S. citizen if the money had been found. But this was

¹ Gold bars worth \$166,770,000,000 that disappeared from their storage place in the basement of the WTC complex and of which only \$230 million were recovered. These were all located in Building 4 of the WTC

² Link: <https://tinyurl.com/3b9ncbcc>

prevented. The next day, according to the official narrative, one of the hijacked planes hit precisely the part of the Pentagon where the experts were searching the records for the holes.

Those who want to believe in coincidence are welcome to do so. The fact is that it is still unclear which object really hit the Pentagon. Since all film recordings of neighboring buildings are locked away, and the only published video does not show any aircraft, we can only speculate what really exploded there. I can only assure you that it was most likely not a terrorist with a commercial airliner.

September 11 has seemingly been used in various ways as a cash cow. By marketing the event as a terrorist attack, the staging of 9/11 also functioned as an argument for promptly entering Afghanistan with a “coalition of the willing.” A short time later, Iraq was systematically looted. The fight against terror was thus only the pretext for plundering one country after another, financed by taxpayers’ money. In the case of Afghanistan, there was not much to gain in gold or similar assets. Instead, they were able to take over a gigantic cultivation area for opium, including agricultural personnel that worked for minimum wage.

While the Taliban enforced a restrictive drug policy¹ until 2001, the opium fields exploded shortly after the Allied invasion. In a very short time, the share of Afghan heroin² on the world market increased from 0 to 90%. This expansion and the consequential business are still lasting. Insiders and whistleblowers repeatedly reported how tons of drugs were smuggled into the U.S. in the

¹ In July 2000, Taliban leader *Mullah Mohammed Omar*, in cooperation with the United Nations, declared that poppy cultivation was un-Islamic, leading to one of the most successful anti-drug campaigns in the world.

² Estimates from the UN Office on Drugs and Crime (UNODC) in 2006 suggest that 52% of the country’s gross domestic product (GDP) is generated from drug cultivation.

coffins of fallen soldiers.¹ These logistics were organized primarily by the CIA. Foreign intelligence has traditionally had the most experience turning drugs into cash in black accounts. However, the Iran-Contra affair showed that other intelligence agencies, such as the NSA and parts of the U.S. military, were also involved in such black operations.

An American soldier in a poppy field in Afghanistan

The financial resources allocated to the Afghanistan mission were indeed under parliamentary control. However, the money generated through the sale of drugs out of the country could be used freely. If we can assume that the tentacles of the System controlled much of the export, then many trillions of dollars were generated there over the years after 9/11.² In the context of my

¹ *Alfred W. McCoy* "The Politics of Heroin: CIA Complicity in the Global Drug Trade"; New York: Lawrence Hill Books, 2003.

² In October 2009, the New York Times published an article by *Dexter Filkins*, *Mark Mazzetti*, and *James Risen* reporting that a senior U.S. official had alleged that *Ahmed Wali Karzai* had received regular payments from the CIA for eight years - shortly after his brother was elected president - and had been involved in the opium trade in Afghanistan.

hypothesis, this money mainly fueled secret projects designed to prepare for a pole shift. If I were the System, I would have done it exactly like that, and the known circumstantial evidence precisely reflects such an approach.

We can generally suspect that large amounts of money have been put aside to feed the shadow government. Presumably, some schemes were so efficient and covert that knowledge of them never left the protected circle of conspiracy. But that is just an assumption. So let's imagine hypothetically, on the basis of specific circumstantial evidence, that black money is not the problem. Let's continue to follow the thought process that we can rely on generous financial resources in our role as the System. Additionally, we count the most powerful banking dynasties, such as the *Rothschilds* and the *Rockefellers*, among our allies, and even the FED¹ serves us. Hence, there should be no doubt that money is not the most significant challenge here. The much more important question is, how should we use these funds?

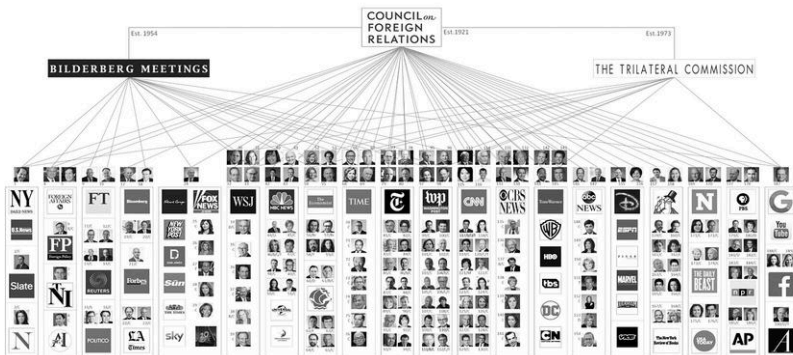

4.3 Thought Control and Sovereignty of Opinion

Once we assume that money is not the problem and that we can siphon off gigantic sums from the world market, the primary issue becomes controlling public thinking and the narratives that dominate society. Primarily, this proposition makes sense regarding the cover-up of secret machinations of money-raising, which must be veiled and, at worst, transfigured as individuals' or systemic greed. But concerning preparation, the visible measures

¹ The Federal Reserve System, often called the Federal Reserve or FED for short, is the central banking system and the Federal Reserve of the United States of America. It is essentially a private Institution based on three lies: it is neither "federal" nor has it "reserves," and certainly, it is not a real bank.

regarding the pole shift must also be integrated into an innocuous narrative so that the true intentions do not come to light.

Complete media control over collective thinking is paramount in our hypothetical endeavor and costs billions. Think tanks¹ and influencers² have to be paid. In the West, the entire media landscape is controlled by the Bilderbergers, the WEF, the Council on Foreign Relations, and the Trilateral Commission, but the alternative media sector must also be managed. On this front, the focus is primarily on “outrage management.” The System rather prefers the critical minds to poke around in a few selected scandals than allow them too much “leisure time” to look at the bigger picture. This “pre-occupational therapy” is also costly.

Media control by Bilderberg Group, CFR, and the Trilateral Commission

Of course, preventing individuals from stumbling over significant anomalies and beginning to recognize the agenda described here is impossible. But that is not necessary either. Instead, it is more important to contain a critical mass in alternative media from

¹ Mostly private companies that develop strategies and forecasts for social or geostrategic scenarios and design campaigns to guide them like the RAND corp.
² Term for social media publicists who have a significant following.

grasping the larger context—all too prevalent ideas could rub off on the mainstream. The broad spectrum of opinions and competing narratives within the truther movement serve as a layer of insulation. It functions as a cushion of distraction between the knowledge about the geophysical reset and the public’s general perception. Nevertheless, if awareness in the alternative spectrum reaches a critical momentum, the System will recognize this in time and respond. AI-powered analysis of communication in social media, including data skimmed from listening “smart devices” (cell phones, Alexa, Google, and Co.), can be used to recognize almost in real-time when an uncomfortable topic is getting too much attention. Based on the accounts of *Edward Snowden*,¹ we know that the CIA and the NSA have full access to all these networks.

Then countermeasures must be taken immediately by launching a new scandal to refocus public engagement. A political puppet, for example, is sacrificed to public outrage, or some breaking news is announced in the White House, which later turns out to be a “nothing burger.” In critical cases, the System could also stage a natural disaster with HAARP² or similar technology to gently guide the collective consciousness toward another topic.

¹ *Edward Joseph Snowden* (born June 21, 1983) is a former computer intelligence consultant and whistleblower who leaked highly classified information from the National Security Agency (NSA) in 2013 as an employee and subcontractor. His disclosures revealed numerous global surveillance programs, many run by the NSA and the Five Eyes intelligence alliance with the cooperation of telecommunication companies and European governments, and prompted a cultural discussion about national security and individual privacy.

² The High-Frequency Active Auroral Research Program (HAARP) was initially a program of the University of Alaska Fairbanks and the U.S. Navy to study the ionosphere, but evolved into a weapons project. Several countries now have such facilities. *Michel Chossudovsky* stated in a book published by the Committee on Monetary and Economic Reform that “recent scientific evidence suggests that HAARP is fully operational and can trigger floods, hurricanes, droughts, and earthquakes.”

The NSA headquarters, where all intel is gathered

This control could be fully automated and managed by artificial intelligence—at least as far as discussions of specific issues on the internet are concerned, which can be redirected or framed by chatbots. We completely underestimate how much dominion an AI already has in this world. Control over MSM and Hollywood is complex and will not be explained in detail here. Much has been published about it.

Most “awakened” people recognize that mass media and Hollywood significantly influence the collective consciousness. However, it is essential to point out that so-called honey pots guarantee the unconditional loyalty of the steering elites from the entertainment milieu. Operations like Epstein Island¹ are thus

¹ *Jeffrey Epstein* installed hidden cameras in numerous places of his estate to record sexual acts of celebrities with underage girls for criminal purposes such as blackmail. The list of passengers who regularly flew to “Lolita Island” in private jets is long and involves, among others, numerous prominent politicians.

only the tip of the iceberg. These “honey pots” aim to lure influential individuals from politics and the entertainment industry into compromising positions, document them in the process, and thus make them susceptible to blackmail.

4.4 Physical Preparations

Now that we theoretically have sufficient financial resources in the hypothetical position of being the System, additionally, we control the narrative almost impervious, it is time to take concrete initiatives. The most logical approach to prepare for a cataclysmic event on the Earth’s surface would be to build bunkers underground. These so-called DUMBs,¹ are based on measures that other advanced civilizations before us have recognized as appropriate preparation for a pole shift, as in Derinkuyu,² Lalibela,³ Petra, Rakhigarhi⁴ etc. Extremely fascinating in this context is the site of Göbekli Tepe,⁵ around which several underground cities are formed.

As far as ancient European underground structures are concerned, I can only recommend the work of *Professor Dr. Heinrich*

¹ Acronym for Deep Underground Military Bunkers

² Derinkuyu is located in Cappadocia and is known for its large, multi-story underground city. There are several historical underground cities in the area carved out of a unique geological formation.

³ Lalibela (Amharic: ለሊቤላ) is a city in the Amhara region of Ethiopia. It is known for its famous monolithic architecture carved into the rock.

⁴ Rakhigarhi has 11 underground complexes with a total size of 550 hectares. Six complexes are dwellings belonging to the “preformation, early Harappan” era.

⁵ Göbekli Tepe (Turkish for “bulbous hill,” Kurdish Xirabreşk) is a prehistoric site 15 kilometers northeast of the southeastern Anatolian city of Şanlıurfa in Turkey. The site’s age is estimated to be 8,800 - 700 BC, and monoliths of up to 50 tons were used.

Kusch and his wife. His research documents extensive underground complexes, some of which are older than 30,000 years.¹ These underground cities have already survived numerous transformation cycles. From his investigation, we can conclude that DUMBs provide more than adequate protection in case of a tremendous geophysical transformation. It is reasonable to assume that the System would consider the same approach, and, indeed, there are many indicators.

There are many odd murals and pieces of art inside the Denver Airport.

If we believe the reports of whistleblowers like *Phil Schneider*,² then the production of DUMBs has been progressing briskly for decades. In North America alone, there are over 200 such facilities, of which only a tiny fraction appears on official military lists. In

¹ Prof. Dr. Heinrich Kusch Books: "Secret Underworlds"; "Asia's Underworlds"

² Nexus Magazine (Ger) N° 102; Article: "The Man who brought us the DUMBs"

this context, ghost towns in China and projects like the seed vault on Svalbard¹ can also be counted as part of the preparation. However, these installations are probably only the tip of the iceberg visible to the public. Much more fascinating to me are projects whose actual dimensions beneath the surface are only myths, such as Denver Airport, Dulce Airbase, and Pine Gape. Also, the new Berlin airport, which is reluctant to get finished and registers unusual amounts of overburden, arouses my suspicion.²

In the context of preparation, the bunkers may only be the primary response to a pole shift scenario and the associated effects. There may be even more secretive projects that also deal with relocation to other planets³—if that is possible. These preparatory measures could also be financed from black accounts and partly through military budgets. Building state-of-the-art bunker systems in secret is not the most challenging aspect of the preparation phase—it is only the most expensive. Another challenge is finding suitable people who can handle the post-reset reconstruction. In addition, the System must quietly equip the facilities with specific resources that humanity needs for a controlled restart.

The System has been using artificial intelligence for some time to find suitable candidates for reconstruction by filtering large amounts of data from the Internet. Following the statements of

-
- ¹ The Svalbard Global Seed Vault is a project of the Global Crop Diversity Trust (GCDT) for the long-term storage of seeds to preserve and protect the species and variety diversity of crops.
 - ² Berlin Brandenburg “Willy Brandt” Airport (IATA: BER, ICAO: EDDB) is an international commercial airport located in Schönefeld, south of the city limits of Berlin in the German state of Brandenburg. Expansion buildings are planned until 2035. Construction of the airport, which began on September 5, 2006, was one of Germany’s most significant construction projects. The start of flight operations was initially planned for November 2011. Due to faulty construction planning, inadequate construction supervision, and extensive technical deficiencies, the opening date has been postponed seven times.
 - ³ Of course, this consideration is invalid for supporters of the flat earth theory.

Edward Snowden we may assume that the data-kraken of NSA, Google, and Co. have created a holistic profile of all people. This process includes a detailed analysis of individual abilities and psychological dispositions. Our browser history alone can allow the System to gain a comprehensive insight. Do we only watch cat videos on TikTok, or do we read the latest publications on nano-technology? Any data that is skimmed from us helps the System filter candidates.

It would be highly speculative to guess what specific qualities and characteristics the System pursues. Still, it is safe to presume that detailed lists of candidates already exist, as depicted in the film “Greenland.” Once the situation becomes critical, personal invitations could be issued to be evacuated. In this aspect, the blockbuster “Greenland” should provide real insight. For those who generally believe that Hollywood spreads isolated truths garnished with many fictional smoke candles, the film “2012” by *Roland Emmerich* is also recommended. Furthermore, the movie “Don’t Look Up,” which is regarded as an analogy for many global topics, could also be interpreted from the perspective of cataclysmic cycles. One goal to assimilate such subjects associated with the pole shift seems to be filing these topics under “entertainment” and “fiction” within the collective consciousness, thus making an intellectual debate more difficult.

4.5 Crises as a Form of Diversion

Getting physical resources in large quantities underground such as construction materials, semiconductors, and microchips is challenging. You cannot steadily fill up the bunker facilities over time because you want to have the latest technological generation shortly before the catastrophe strikes. A short-term transfer of goods of this magnitude is hard to hide in the face of millions of amateur brokers and various market regulators. However, such

anomalies in the world demand would only be conspicuous in a regular context, which no longer exists since 2020.

Did you notice which things became extremely scarce shortly after the pandemic? Exactly: building materials, semiconductors, microchips, etc. Officially, of course, Corona is blamed for this, but the pandemic state of emergency could be just a clever diversion. Undoubtedly, entire industries were at a standstill, making many shortages seem logical. Since even toilet paper was scarce during some phases, no one was surprised that no more microchips were delivered. The chaos during this period was so great that it was impossible to identify where the bottlenecks occurred. So it remains less remarkable that construction materials disappeared from the global market throughout 2020 and beyond. This widely overseen anomaly was still noticeable globally. Some of the construction activities were also frozen during this period, which should, in principle, lead to less material consumption.

Consequently, I suspect that resources were extensively diverted to emergency facilities within my hypothesis. However, this assumption does not mean that the crisis of 2020 was solely about covering up the clandestine outflow of certain assets into the DUMBs. Instead, the “Plandemic” should be viewed as a Swiss Army knife to conceal many secret machinations designed to prepare for the reset. These modifications in society include, for example, the expansion of surveillance and emergency laws that allow the System more latitude in its further actions. In U.S. law, I must mention Senate Bill 4488¹—“Global Catastrophic Risk Management Act”—introduced in 2022. While justified with the Corona pandemic, this resolution provides the perfect framework for all contingencies deemed an existential threat to humanity.

¹ This bill directs the President to establish an interagency committee on global disaster risk. Global disaster risk is defined as the risk of events or incidents that are so consequential that they significantly damage, set back, or destroy human civilization on a global scale. Link: <https://tinyurl.com/3padr2fh>

Moreover, elites could simulate and test scenarios for future societal structures during the last pandemic state of emergency. Thus, the situation also served to expand totalitarian control.

From 2020 onward, we have been repeatedly confronted with the fact that basic foodstuffs can temporarily become scarce. In addition to the pandemic, other crises have since emerged to justify such shortages. The Ukraine conflict currently has the most significant impact, but the West's tensions with China over Taiwan also bear economic consequences. At least, this is the state of the crisis in early 2023. We can consider these anomalies as indicators that the preparation phase is progressing. The central thesis behind such staged situations is that they can be used to disguise covert activities to prepare society for the big show.

Nevertheless, there is an additional psychological component. The fabricated insecurities keep the collective permanently under subtle stress and pressure. The general recipe for “transforming” society is to alternate phases of terror with phases of calming. Yet, even in the supposed “relaxed periods,” the System must always communicate that the old normal is over, and new troubles could emerge out of the blue. This approach is the most effective way to generate a growing collective willingness to submit to a totalitarian regime just for the sake of returning to a state of stability.¹

4.6 The Role of World War III

In the traditions of the European prophets, it becomes evident that these known people with precognitive perception have repeatedly seen a modern war with drones and tanks, among other

¹ The YouTube channel “After School” has made a popular presentation on the psychological mechanisms called “Mass Psychosis – How an Entire Population Becomes Mentally Ill,” which has been clicked over 2.7 million times.

things, on German soil. This conflict is anticipated to end soon after it commenced, stopped by the symptoms of a pole shift. There are also clear indications from American sources that there will be an invasion of Russian and Chinese troops on US and Canadian territory—like in the accounts of *Edgar Cayce*. In both cases, the military altercations are interrupted by geophysical catastrophes associated with a crustal displacement. These statements coincide with the “Anglo-Saxon mission” brought to public attention by a Project Camelot whistleblower in 2010.¹ Let’s assume this is the plot the System is preparing now. This correlation raises the question of why a global war should be orchestrated right before the pole shift.

Why do we find so many predictions of World War III before a cosmic event?

Even if we were unaware of these details, we must acknowledge how the geostrategic rifts between East and West are deepening—this development is by design. The Middle East is also more unstable than ever. Why would the System want to force a military escalation before a geophysical event? If we assume that

¹ For more on the Anglo-Saxon mission, see chapter 5.6

all major powers are working together in the background and have knowledge about the situation, there must be a specific intention, but which? After all, we are talking about a cataclysmic pole shift that would destroy much of the critical infrastructure and eliminate billions of people anyway. What could be the benefit of initiating a global conflict before that? At first glance, this makes no sense at all—or maybe it does. Let's play out the scenario soberly from the perspective of a cold, calculating intelligence.

Now that the System theoretically has all the necessary goods withdrawn from the international market and a list of possible experts to enable controlled reconstruction, it must play out one last action on the global stage. This implementation is primarily about deception. To distribute all the physical and human resources underground without a critical mass noticing that some “bellwethers” suddenly disappear from the herd, the System must once more resort to deception and distraction—this time on an epic scale. Here the scenario of an impending world war comes in handy.

It may sound redundant to some readers, but since characters like *Trump* and *Putin* are still so idealized in many areas of the truther movement, I have to bust this bubble of illusion once more. According to my understanding, world politics is a gigantic theatric play and, at best, comparable to WWF wrestling matches. World leaders may berate and metaphorically hurl each other through the ring in front of an angry and polarized audience, but the outcome of this rendition is already determined. It's all part of a script that follows the principle of controlling thesis and anti-thesis to create their intended synthesis. This method is ancient, but we call it “Hegelian dialectic” nowadays.

Some elites are only concerned with power and fulfill what they are asked to do without knowing the overarching causal connection. Other politicians act exclusively according to the instructions of their “mentors” consisting of secret societies or structures such

as the WEF, the CFR, and the Bilderberg Group, etc.—the middle management of the System—still not knowing what is really going on. However, there may also be political or even religious leaders who are fully privy to the more significant nexus and entirely voluntarily fulfill the role expected of them within the orchestration framework. It is irrelevant to speculate about which popular puppet falls into what category. Ultimately, they are all playing according to the parameters set by the top of the occult power pyramid. The predetermined plot serves to facilitate the optimal transition into a new paradigm from the point of view of the ruling System.

From the perspective of the Phoenix Hypothesis, it is intentional that the current clash between NATO and the Eastern powers of China and Russia is supposed to become critical. Those directly involved in the conflict—from generals to tank drivers—may believe in a geostrategic necessity. Many may even be pursuing “altruistic” ideals as they fight for their nation or homeland’s freedom, but in the end, they are all just pawns in a game of deceit and distraction. Although a third world war, which is already looming in Ukraine, would de facto be nothing more than a staged tactical maneuver, the casualties and suffering during this conflict are extremely real.

The enactment of global war is not only about distraction. All sides need military escalation because it is the only way how the leaders of the nations can justify ever higher military budgets to their people while pointing fingers at the other party. With this money, they can finance measures that, while officially intended to prepare for war, are in parallel beneficial in any different disaster scenario. Behind the public stage, they are all in the same club and amateur actors in a macabre spectacle for the ignorant and credulous masses.

Before Earth’s cosmically induced geophysical transformation becomes visible to everyone, the last step of preparation could be

the global escalation of World War III. This trajectory is prophesied and obviously what they are preparing for. However, it is not the intention of the System to commence an uncontrolled nuclear exchange but to initiate a massive conventional carnage, if possible, worldwide. However, this deduction does not guarantee the absence of isolated tactical nukes,¹ which might still be used to underscore the seriousness. Even in the prophecies, we find a few specific events where seemingly small-yield atomic bombs are utilized. This theater primarily distracts from a final displacement of physical and human resources. Secondly, it helps to thin the herd and the military in particular.

Since renegade militaries and highly specialized units that have found no place in the bunkers pose the most acute threat to controlled reconstruction, a global conflict is the most effective way to eliminate them. Armies must decimate each other to an insignificant remnant, and a staged conventional war would ensure that reduction in the long run. A radical downsizing of the military diminishes the possibility that troops inevitably left behind but well-organized will install their own order. This takeover is possible during a transition phase of an unavoidable power vacuum. Because these troops have been betrayed, too, I see sufficient reason that their officers may begin to question their loyalty towards the ones that left them behind. Those are potential risks that the System has undoubtedly considered. Moreover, it mainly needs engineers, not fighters, for a controlled reconstruction.

The question of why the System also wants to reduce the population before an event that will cause enormous damage can be explained by the conveyed mindset: The directing intelligence behind the curtain approaches the situation like a sheep farmer

¹ I am aware that there is widespread skepticism concerning atomic bombs or the technology being used to create powerful explosions, as we saw in Hiroshima and Nagasaki, within the truther movement. Accordingly, it could be just powerful conventional devices.

preparing his flock for inevitable adverse environmental conditions.

Let's try to imagine a flock of sheep before a catastrophic "drought"—in this case, the collapse of essential infrastructure triggered by cataclysmic Earth changes. If you cull the herd beforehand, you would have more resources per capita. These distribution benefits are trivial math. War also activates all the established emergency mechanisms already running at maximum efficiency during the predicted geophysical escalation. More important, however, is the aspect of returning to the surface. If the System wants to bring the chosen ones from underground back to the surface to rebuild the "farm," there shouldn't be too many hungry and desperate survivors waiting for them. This issue is especially problematic if those left behind have become more resilient, ruthless, and capable of defending themselves. This tendency is inevitable due to an advanced natural selection process, actuated through the struggle to survive and the constant skirmishes for scarce resources. Such people are difficult to keep under control if they are too numerous.

Even if the System has prepared additional rations to feed the many extra mouths, there could be problems until the "farm" produces sufficient resources for everyone. Too many survivors in a scenario of total collapse of the world economy and global infrastructure could turn the designated transhumanist designer society into a "Mad-Max-knock-off" in no time. This situation is precisely what the Systems must avert. Moreover, from a military point of view, a large part of humanity is "prosperity-damaged" anyway and entirely useless for reconstruction work under harsh conditions. A controlled decimation of the herd just before the disaster unfolds could significantly improve the odds so that the survivors are not forced to "consume" each other. The System has certainly run simulations on this scenario and has the most accurate estimate of the optimal reduction rate.

Suppose you can abstract why population reduction might be beneficial in a controlled reset and rebuild scenario based on unavoidable external influences—in that case, you will undoubtedly come up with an excellent theory regarding the recent global gene experiment. This campaign makes even more sense when you hypothetically consider that in addition to the ADE effect,¹ a nano-graphene-oxide-based hydrogel interface² has been “co-inoculated” that could be “activated” in a precise time via frequencies. Other technologies such as nanocapsules³ could also perform a similar function of a remote self-destruct mechanism. Since independent researchers and the manufacturers⁴ themselves have confirmed that nanotechnologies are found in the “vaccines,” such a mechanism could explain the various side effects.⁵ You will understand what I am trying to convey once you have done your homework on this topic. This education begins, for example, with the question of why New Zealand (like most other Western countries) is experiencing up to 20% annual excess mortality as of 2021.⁶ Since the islands, unlike most other countries, have been able to isolate themselves as far as possible from the alleged

¹ Antibody-dependent enhancement (ADE), sometimes less precisely called immune enhancement or disease enhancement, is a phenomenon in which binding of a virus to suboptimal antibodies enhances its entry into host cells, followed by its replication. The suboptimal antibodies can result from natural infection or from vaccination.

coronavirus, “Longcovid” can not account for a convenient explanation. Accordingly, it seems like a creeping population reduction has already begun. The bigger question is whether there is indeed a secondary trigger based on nanotechnology.

According to the source material, which I will present in the argumentation chapter of the book, it becomes evident that the pole shift is not a protracted process, but occurs over a few acute weeks or months. Hence, the reconstruction could begin promptly. Furthermore, it can be assumed that not every seed in the form of DUMBs will “sprout” because the redistribution of the climate zones is basically like Russian roulette—different models are circulating. However, some researchers are sure where the future polar regions will be located—still, I would not place a bet on that. In any case, humanity will open a new chapter, and this future does not necessarily have to conform to the ideas of our current elites but may as well usher in a more humane age.

Nonetheless, it should be apparent that the occult fraternities strive for a transhumanist agenda and even seek to integrate the human mind into a digital metaverse.¹ From a spiritual perspective, we could fall one level deeper into “cosmic illusion” (Sanskrit: “Maya”) in the long run if we allow this unnatural intervention into our evolution. The preparation for a world controlled by artificial intelligence is in full swing. Whether an all-encompassing control system can be fully implemented before the cosmic reset remains speculative; likewise, it seems inevitable for the System to briefly shed its outer onion layer of control and dominion, which could allow humanity to determine its own blueprint for the future. Right there hides a truly epochal oppor-

¹ The metaverse is a concept in which a digital space is created through the interaction of virtual, augmented and physical reality. The central aspect of this is to unite the various action spaces of the Internet into one reality. In a metaphorical sense, it also refers to a virtual reality construct that serves as a “habitat” for digitized consciousness.

tunity to emancipate ourselves from the System. Therefore, we must also learn to see the catastrophe as an opportunity and prepare accordingly.

4.7 Potential Future Fake Crises

The following chapter is highly speculative, as it deals with optional “steering crises”¹ that the System might stage to better prepare the collective for the upcoming geophysical transformations from their perspective and to accustom us to totalitarian control. Although I am only consulting my inner crystal ball, these concepts are based on substantial research. Whistleblower statements and the recurring patterns in international prophecy primarily inspire my forecast. These types of sources should be taken with a grain of salt for different reasons. Nevertheless, it becomes exceptionally illuminating at those points, where predictions coincide with insider statements, and this convergence also reflects tangible trends within global society.

In general, the System will stage a balanced dance of anxiety. On the one hand, fear is artificially created and instrumentalized to divide and control humanity. On this front it needs to generate artificial crises to steer society in the intended direction. At the same time, however, the true motives are concealed to avoid panic regarding the actual event. In this bizarre spectacle, all parties fulfill their roles. Even alternative media has been infiltrated and is being used to control the world’s fate via thesis and antithesis.

Since the Corona crisis proved to be a potent tool for implementing extensive modifications in global society, we must assume that this principle could be repeated in a modified form.

¹ Means an artificial and purposefully created crisis that is implemented to steer the course of the collective on the the world stage.

This assumption is supported by the fact that topics such as Ebola or monkeypox were propagated soon after the last hysteria subsided. *Bill Gates'* cryptic statement that “the next pandemic would get more attention” also foreshadows great things.¹ However, they could not run the first Corona scheme a second time. Therefore, it can be assumed that the following approach will not consist of medially conjured-up excess mortality, but a real perceptible mass death could be initiated. Predicting whether it will be a real bioweapon or an effect triggered by nanotechnology already distributed to the masses is difficult. The System may also forego this option and play a different card.

Population reduction can also be effectively ensured through wars. Before it comes to an ultimate escalation, which can bear the title “World War III,” different fronts must be heated up first. While the East-West conflict has almost reached operating temperature, further flashpoints must be ignited. According to the sources already outlined, the Middle East is high on the list. The epicenter and designated breaking point is the Iran-Israel conflict. North Korea and Taiwan are also possible wildcards in the Asian context.

As global tensions increase, secondary crises will sprout from the ground, of which we have only been “allowed” to enjoy a foretaste. Resource shortages, energy and internet shortages, bottlenecks, and the resulting economic dislocations will keep people in check. Global refugee flows will further diversify the gene pool and undermine society’s internal cohesion. Thus, on the one hand, the System ensures that no critical mass with coherent demands will emerge from the people, and on the other hand, mixing guarantees that no race will be lost. It must be assumed

¹ On June 23, 2020, *Bill and Melinda Gates* spoke about COVID-19 on C-SPAN in a virtual conversation with the U.S. Chamber of Commerce about the impact of the coronavirus pandemic. The final grin of the two interviewees became world-famous among skeptics.

that isolated continents and their inhabitants will be hit harder during the geophysical transformation or end up in one of the polar regions.

As expected, the climate crisis will continue to be “milked” to create general uncertainty, siphon off funds, and conceal symptoms of the natural reset cycle—by blaming CO₂ emissions. Since we know climate change is a phenomenon observed recently on other planets of our solar system—like Mars,¹ for example—the main perpetrator might be a more general one. Many blame the sun rather than CO₂—with good reason. Furthermore, the issue serves to polarize the population. We remember, “Only disunited people can be governed!” Most people, who have already lost it over climate endtime hysteria, will show little susceptibility to real global threats. They are saturated with people who propagate doom based on CO₂. The System could also use climate panic as a pretext for lockdowns and other control measures—comparable to what they did during Covid.

This game of artificially created hysteria will continue to ramp up on all fronts, and I expect no end to this trend until the controlled “meltdown” is initiated. Ideologically, politically, religiously, economically, and even on the gender level, the System will divide people where possible. Those who see through the game will not let themselves be drawn in by any movement, even if they resonate with many of the views of a particular grouping. The System will always try to control both poles—the seemingly righteous and the obviously perverted. Even the pole-shift community has already been infiltrated with factions such as the “Creative Society,” which, like the Extinction Rebellion move-

¹ Mustard, J., Cooper, C. & Rifkin, M. “Evidence for recent climate change on Mars from the identification of youthful near-surface ground ice.” *Nature* 412, 411–414 (2001). <https://doi.org/10.1038/35086515>

ment, is considered system-controlled. These organizations will derail the discourse and offer false solutions.

Everyone will get their share of this mixture of conflicts and crises. Correspondingly, the System will ensure that the alternative media will be less and less united. The “awakened” will receive their own polarization and preoccupation treatment. The truthers have been silently infiltrated and are becoming increasingly psychologically fragmented. To this end, various competing savior ideologies will be pushed. The principle is always similar, but the savior figures are interchangeable. One believes in Jesus, and the other in benevolent aliens who will pull the cart out of the mud. Let’s not forget *Trump* and his “White Hats,” too. With the sedative drug “Hopium,” they will continue to keep large parts of the alternative media scene in passivity.

Another significant proportion of the “awakened” who have neither fallen victim to the “Hopium” intoxication nor to complete resignation will fight against windmills. They will blame different tentacles of the same octopus and fight over the question of who is the true villain. Occasionally, they will be offered a few politicians or other powerless stooges as sacrifices, so they will not lose their motivation to focus on the hand puppets. It is conceivable that the present power structure will surrender its outer onion layer to manage widespread outrage. This sacrifice is acceptable. The System has neither room in the bunker nor practical use for the lower management of narcissistically disturbed political puppets and fake elites. Only a few within this guild have genuine authority—nor were they hoisted to positions of power based on intelligence. Especially in political careers today, this intellectual quality is counterproductive.

In times when the System is forced to make abstract maneuvers on the world stage to implement preparatorily measures, creating artificial crises as justification alone is not sufficient. More than mere distraction is needed to prevent a critical mass from

beginning to ponder about hidden intentions. The control system must also camouflage or explain overreactions with apparent incompetence and sheer stupidity. That is why the current political elites, especially in the West, are such an eerie panopticon of buffoons. Just look at the *Biden* administration or the current German government with *Mrs. "Bockbär"* as a prime example. Who could take those folks seriously? Ordinary citizens should always be able to comfort themselves with the notion that there is no conspiracy but rather believe that pure stupidity is responsible for the odd occurrences on the world stage. Indeed critical questions only arise when one recognizes an intelligent agenda behind the conspicuities. But that's hard to argue when politicians in unison seem as if they've escaped from a traveling circus.

Therefore, we should avoid the mistake of evaluating the intelligence of the agenda based on the performing protagonists. The Punch on stage may be a simple-minded character, but the puppeteer is not. Even the crocodile, traditionally the antagonist of this cast, is animated by the same intelligence from backstage. Nevertheless, many supposedly influential politicians are no longer needed after a final point, and they have to step down from the podium. These pawns could be sacrificed to the mob, so the System doesn't need to get its hands dirty. This oblation takes the pressure out of the social cauldron and disposes of the temporarily useful idiots. I don't even mean the term "useful idiots" disrespectfully since even these people are only abused for the larger agenda, and yet this description just gets to the point.

Consequently, we must expect the System to admit increasingly to selected grievances within the mainstream narrative. We can already see such "limited hangouts" in the context of vaccination criticism. Accordingly, isolated leaders who manifest themselves as savior archetypes will emerge even though they sprung off from elite circles. In addition to *Trump*, other influential individuals like *Tucker Carlson*, *Elon Musk*, or *Robert F. Kennedy Jr.* could ascend, improve their standing in the American context

and gain more followers. All cultures have their respective prospects for this position. They will keep the countermovement within a limited narrative range and can therefore be seen as controlled opposition. Of course, one may debate in individual cases whether they fulfill their role consciously or unconsciously.

Based on the ongoing acknowledgments, a calculated shift from left-wing liberal to right-wing conservative may become apparent in the next few years, and this pendulum swing has already begun. A radical left drift is also conceivable for some European countries. While some simple-minded skeptics will draw “Hopium” from this development because all the perverted liberal ideologies are losing steam, this euphoria will not last. The System is almost indifferent to which side is “in charge.” With an equally perverted right-wing conservatism, it can probably legislate far more radical measures than it would be possible now under the current Biden administration. Likewise, the same principle applies to a pending shift toward a right-winged government in Germany. Therefore, do not trust any party. The more unfair and biased the MSM reports about a specific movement or particular individuals, the more they advertise them to the skeptic folks—this is intentional. Actual threats to the System will always be omitted.

This initial evaluation leaves us with the usual specters of doom that are permanently in the air anyway. First, there is the inevitable financial crisis. The stock market is almost 100% controlled by artificial intelligence and governed by mathematically precise cycles. The work of *Martin Armstrong*¹ must be mentioned in this context. So if there will be another monumental collapse, it is intended and serves a purpose—presumably, the consolidation of assets and power. These crises, some of which have been on the

¹ *Martin Armstrong's Economic Confidence Model (ECM)*, sometimes referred to as the “Pi-Cycle,” is the basic model for understanding the global economy. This model has accurately predicted cyclical economic events far in advance. Link: <https://www.armstrongeconomics.com>

horizon for decades, are optional tactical maneuvers that the System can play as a “problem-reaction-solution principle” like action cards in Monopoly. However, all these choices also have advantages and disadvantages for the prevailing order. Therefore, it remains a speculation what will happen and when.

One of these optional approaches could be based on utilizing electricity blackouts. However, there are various alternatives for how the System would justify such a crisis. Regarding this, let’s focus only on the situation in Europe. First, the European grid has been destabilized by maneuvers argued with green policies and Fukushima prevention. Further, sanctions have cut Europe off from resources from Russia, such as natural gas. A hacker attack or a fake solar storm could also be optional triggers. We may have to reckon with a combination of factors that would cause such a collapse.

The implications of a complete blackout would be catastrophic, but even partial outages in the form of brownouts should not be underestimated in their consequences either. For the System, casualty rates would be easily controllable, and it could declare martial law. It would address the issue of population reduction and totalitarian control in one turn. There is also the aspect of information cleansing if data would suddenly disappear from servers in the process. Such a blackout scenario would be a versatile tool for a controlled preparation for the cosmic reset. Nevertheless, this approach could negatively affect production and infrastructure, which the System still depends on regarding preparation. Anyway, those living in Europe should know the likelihood of this option as a catalyst for the global agenda. The U.S. has a similar situation, although the grid is designed slightly differently.

In my first public lecture on the Phoenix Hypothesis in January 2023, I mentioned the “*Werner-von-Braun* scenario” in the context of possible steering crises. At that time, it still fell into the “X-factor” category as rather unlikely. Meanwhile, engaging and

controlling the collective with a staged UFO hysteria is more believable because the topic circulated massively in the mainstream just a few weeks after my lecture. In the context of the mysterious “spy balloons” allegedly sent by China, MSM also casually pushed the subject of an extraterrestrial threat. However, I was surprised about the almost uniform reaction in the alternative media—foremost in Germany. Most truthers realized it was a charade.

The supposed deathbed confession of *Werner von Braun*,¹ whether authentic or not, was made public by his secretary² at the time and is widely known in the alternative scene. In it, *von Braun* is said to have claimed that there are plans in the shadow government to unite the world under a fictitious alien threat. In the context of the Phoenix Hypothesis, I suspect that staged attacks could also be used to decimate the population. In addition, there is an awareness among truthers that holographic technologies à la Bluebeam³ exist that can enable extensive staging in the sky. Therefore, the truthers reacted relatively calmly to the unmotivated attempt to hypnotize the collective with such a topic. However, this brief hype might not be the final act of this chapter.

¹ *Wernher Magnus Maximilian Freiherr von Braun* (US: /ˌvɜːrnər vɒn ˈbrɔʊn/ VUR-nər vɒn BROWN, German: [ˌvɛʁnɛːʁ fɔn ˈbrɔʊn]; 23 March 1912 – 16 June 1977) was the first director of NASA. He was a German and American aerospace engineer and space architect. *Von Braun* was a member of the Nazi Party and Allgemeine SS, as well as the leading figure in the development of rocket technology in Nazi Germany and later a pioneer of rocket and space technology in the United States.

² *Dr. Carol Rosin*, who later founded the Institute for Security and Cooperation in Outer Space and campaigned against *Ronald Reagan*’s SDI program, revealed what *von Braun* had told her at a press conference in 2001. (National Press Club, May 9, 2001)

³ *Serge Monast* (1945 - December 5, 1996) was a Canadian investigative journalist, poet, essayist, and conspiracy theorist. He is best known to English-speaking readers as the originator of the Project Blue Beam revelations, which involved, among other things, a plot to stage a threat through projections in the sky.

Eventually, they merely tested the general reaction to optimize the plot and further shape the concept of an “alien threat” within the collective unconscious.

Regardless of which of these optional action cards will be activated on the world stage, I can only sensitize that all the enactments primarily serve the big agenda. Still, the purpose is often multi-layered. Fundamentally, however, those artificial crises are always designed to disguise measures to prepare, divert, weaken, or even decimate the population—to divide the people and set them up against each other. Even in the less turbulent phases, humanity will never be given a lasting rest and constantly reminded that the good old days of “normality” are over. What people are upset about is initially irrelevant to the System as long as they don’t see the bigger picture.

The division and attrition must reach a point where the majority would accept a totalitarian regime. The System wants to get people used to this idea of submitting to a central power to finally have peace and security, even before the geophysical reset. Furthermore, a transhumanist agenda is also part of this autocratic concept.¹ As I already indicated, the deeper agenda is most likely aimed at the digitization of human consciousness, which is to be implemented in a quantum computer-based neural network entirely controlled by artificial intelligence.² However, I will deal with these aspects in a follow-up publication. For now, we will stay on the physical level of the challenges at hand. However, before we

¹ Transhumanism (from Latin trans “beyond, above, beyond” and humans “human”) is a philosophical school of thought that seeks to extend the limits of human possibilities, whether intellectual, physical or psychological, through the use of technological processes. The interests and values of humanity are seen as a “commitment to progress.”

² This assessment is based on the statements of the whistleblower *Alexander Laurent* and the leading minds of the WEF’s transhumanist agenda, such as *Yuval Noah Harari*.

come to possible solutions for such a trial, first, I have to argue the fundamental aspects of my thesis.

CHAPTER 5 | THE ARGUMENTATION

5.1 How Realistic is a Shift of the Earth's Crust?

The Phoenix Hypothesis is based on the assumption that a tremendous cyclic transformation of the Earth will soon take place. Further, this possibility is anticipated by the System and taken seriously. In any case, this event must pose a significant menace to the ruling power structure and humanity. Without this natural disaster, the entire thesis that the System is creating artificial crises to prepare and mitigate the impact of such a geophysical event would collapse—like a house of cards. Ergo, I must begin my argumentation with the pole shift. We could start on different levels or from different angles if we look for indications of such a cataclysm. A fundamental “truth” will always be confirmed from multiple perspectives. My study of European prophecy established my first contact with the subject. Admittedly, the most different fundamental questions arise from precognition. How it should be possible that people can see beyond the time horizon is not even the most problematic one.

Unfortunately, prophecy is not the easiest way to approach the subject. I had reservations, too, and I can understand that people from an academic background have difficulties opening up to the divination topic unbiasedly. If I would approach the matter on a purely scientific level and use data for my argumentation, which

comes, for example, from NASA or NOAA,¹ then mainly people from the truther scene will react suspiciously. The distrust towards established scientific institutions is tremendously strong within these circles of skeptics I primarily address with my thesis. Personally, I feel quite the same way. At the latest, with the staging of the pandemic and the mantra-like repetition by MSM to trust in the scientific authorities concerning the advertised therapeutics, all credibility vanished. The same principle applies, for example, to scientific discourses in the context of 9/11 or man-made/CO₂-based climate change.² I could expand and elaborate here, but those who have lost faith know what discrepancies have caused them to become wary.

Science, as it is propagated by the System, has undoubtedly become a kind of religion and primarily serves a secret agenda. Should we, therefore, ignore it altogether? It would be a mistake not to at least look around there. It is unlikely that the System has complete control over everything which is published. In addition, the driving force that governs this realm always needs people who recognize and understand the broader implications and interrelations, at least to some extent. Therefore, the System will hide the fundamental truths, distort the fragments unrecognizably, and garnish them with garbage. Still, in the end, the indications of a cyclic reset are also to be found in science. The same statements

¹ The National Oceanic and Atmospheric Administration (NOAA) is the weather and oceanographic agency of the United States. Among other things, they provide scientifically recognized data on the Earth's magnetic field and magnetic pole wander, which are considered to be manipulated by independent measuring stations.

² Many people cannot understand how the trace gas carbon dioxide, which makes up only 0.04% of the atmosphere and which nature emits 97% of the time independently of humans, could explain man-made climate change. The current thesis of man-made climate change can be traced back to an article by *Wallace S. Broecker* published on August 8, 1975 (issue 189 of the journal *Science* on page 460). This article is considered the beginning of an implemented agenda. Link: <https://www.science.org/doi/10.1126/science.189.4201.460>

could also be made about the established religions. Traditionally, these institutions were the System's primary manipulative tool that began to mix truth with fiction. As far as we know about human history, they are the inventors of this scheme.

I will keep the religious references out of the book as much as possible. Not that they don't exist. Authors like *David Montaigne* put a lot of focus on these correlations. No one here should be surprised that Jews,¹ Christians,² and Muslims³ have their own end-time prophecies that are similar in their depictions of geo-physical manifestations. However, the language of the sources is often highly sophisticated, and there are accordingly different translations. This results in an enormous spectrum of interpretations that people can argue about excessively.

Nevertheless, in all established religions and their prophetic writings, we find clear indications of the symptoms of a cataclysmic Earth mantle shift. Also, the written or even oral records about great floods of the past, as we find them in the story of *Noah* and his ark,⁴ are based on much older chronicles, like the *Gilgamesh* epic. Thus, there are hundreds of flood myths spread all over

¹ Jewish eschatology is the area of Jewish theology that deals with events at the end of days and related concepts. These include the gathering of the exiled Diaspora, the coming of the Jewish Messiah, the afterlife, and the resurrection of the dead. In Judaism, the end times are usually referred to as the "end of days."

² Isaiah 24:1; Job 9:5-6; Psalms 46:2; Hebrews 12:26-27; Isaiah 22:23; Revelation 16:18-20; Esdras 2:4-8 describe popular symptoms that occur during a physical pole shift.

³ The Hadith is a collection of narration, report, communication, tradition of the Islamic prophet *Mohammed*. In it, similar to the Bible, there are descriptions of the end times, which point to a physical pole shift, e.g. sunrise in a new direction, etc. The Hadith is a collection of stories, reports, messages, and traditions of the Islamic prophet *Mohammed*.

⁴ Noah's Ark, according to the biblical book of Genesis, chapters 6-9, was a buoyant box built by the patriarch *Noah*. The word "ark" is derived from the Latin word for box (*arca*), which corresponds to the Hebrew word for box (*tēvāh*).

the Earth and originating from advanced civilizations much older than the Bible.¹

The Deluge painted by *Francis Danby*

Let's look at the natural science perspective first. This level is an approach where very few people won't immediately pull the plug because the theory clashes with their current paradigm. Whoever grants the Phoenix Hypothesis a certain leap of faith regarding the logical preparation and mitigation strategies should not be surprised that a simple search with Google and Co. does not bring much valuable research material regarding cyclic cataclysms. After all, it should not be announced publicly to cause panic. At best, one comes across a few reassuring mainstream articles about the magnetic pole flip, that everything is under control and there is nothing to worry about. I have to point out repeatedly how censored the mass media and popular Internet search engines have

¹ One of the oldest flood traditions is based on the Sumerian creation myth, which was imprinted in a stone slab. It is written in the Sumerian language and is dated to about 1,600 BC.

become, even if it might be redundant for most readers. Some still believe in the Western world's free and uncensored circulation of information.

Since the scientific discourse on the entire context of cyclical transformation is exceptionally complex, and the trend-setting publicists span a whole century, I can only give a rough overview here. In addition, these scholars had to work with data sets of varying completeness and therefore arrived at different kinds of theses, some of which differ only in detail. It is much more important to me that you, dear reader, know where to look in order to get a picture for yourself. I can only summarize how I understood the sources and their core message—as a non-geologist. If you follow these leads, you will face an exponentially growing flood of sources anyway. It is entirely up to you when you start to take the matter seriously and at what point you accept a cyclic cataclysm as a fact.

In modern times, we first find the idea that the world could flip over in a famous work by *Jules Verne* from 1889. In his book “The Earth Turned Upside Down,”¹ he describes the effects of a physical pole shift, although it remains unclear from where he got this idea. Possibly *Verne* was inspired thereby by speculations of *George Cuvier*² or *Frederik Klee*.³ Also, *Sir John Evans*⁴ already in

¹ Link to online version on Google: <https://tinyurl.com/3e9asx47>

² *Georges Léopold Chrétien Frédéric Dagobert, Baron de Cuvier* (real name *Jean-Léopold-Nicholas Frédéric Cuvier*; * August 23, 1769 in Montbéliard; † May 13, 1832 in Paris) was a Württemberg-French naturalist and co-founder of zoology as comparative anatomy.

³ *Frédéric Klee* “Le déluge: considérations géologiques et historiques sur les derniers cataclysmes du globe;” V. Masson, 1847

⁴ *Sir John Evans* (* November 17, 1823 at Britwell Court, Burnham, Buckinghamshire; † May 31, 1908, in Berkhamsted parish, county of Hertfordshire) was an English archaeologist, geologist, and collector.

1866 published a scientific paper,¹ which postulates a displacement of the Earth's crust to explain all the anomalies in the polar regions known back then. However, these scientific publications received little attention. In 1948, the first popular hypothesis appeared in a book by *Hugh Auchincloss Brown*² entitled "Cataclysms of the Earth," in which, for the first time, the suggestion was made that growing ice masses at the poles could cause the axis of rotation to tilt. This idea was gratefully taken up by *Charles Hapgood*,³ who involved *Albert Einstein*⁴ in the discourse. Both scientists maintained extensive correspondence on the subject. *Charles Hapgood* published his standard work "Earth's Shifting Crust" in 1958, three years after *Einstein's* death. At first, he still took over the ice masses as a trigger in his theory from *Brown* but later withdrew this explanation in his subsequent works.

The big difference between *Hapgood's* postulate compared to *Brown's* thesis is that not the whole Earth tilts with its rotation axis, but only the outer Earth mantle shifts cyclically. Therefore, we now speak of an Earth's crust displacement in the context of a physical pole shift. Regardless of new technical details, *Hapgood* provides a massive collection of mainly geological circumstantial evidence that points to such an event that was known at his time. In addition, there are clues from global mythology, such as those

-
- ¹ *Sir John Evans* "On a possible Geological Cause of Changes in the Position of the Axis of the Earth's Crust;" link: <https://tinyurl.com/2s3fwvnf>
 - ² *Hugh Auchincloss Brown* (* December 23, 1879; † November 19, 1975) was an electrical engineer who proposed a theory of catastrophic pole shift.
 - ³ *Charles Hutchins Hapgood* (* May 17, 1904; † December 21, 1982) was an American college professor and author who became one of the best-known proponents of a rapid pole shift with catastrophic consequences.
 - ⁴ *Albert Einstein* (* March 14, 1879; † April 18, 1955), was a German-born theoretical physicist who is widely recognized as one of the greatest and most influential physicists of all time. Within the alternative media, there are numerous voices claiming that the entire theory of relativity was slipped to him by the System.

repeating stories implemented in religious scriptures. *Hapgood* also makes use of enigmatic artifacts such as the famous *Piri-Reis* map,¹ which shows the exact coastline of the Antarctic mainland. The precise geological structure is, for the most part, hidden under a thick layer of ice and can only be located with radar technology. According to this artifact, an advanced civilization with superior knowledge in seafaring and navigation must have once made a map when the south pole was free of ice—according to the current paradigm, this was at least hundreds of thousands of years ago, some even say millions. This documentation must have been duplicated repeatedly over the centuries. On this subject alone, *Hapgood* later wrote an entire book.² The list of circumstantial evidence and resulting conclusions was to be expanded again only five years later. Yet, the corresponding publication by *Chan Thomas*³ was instantly confiscated and censored by the CIA. It was not until 2013 that the document was rereleased based on a Freedom of Information Act request.⁴

Chan Thomas's book, called “The Adam and Eve Story,” had only 57 pages in its original version and a total of 240 pages in a later 1971 edition. One can only speculate why the CIA was eager to withhold the first version even though several prints were circulating. The most plausible conjecture is that the author painted an extremely drastic picture of what the implications of a radical pole reversal would entail for humanity. Moreover, he corrects

¹ *Ahmed Muhiddin Piri* (c. 1465 - 1553), better known as *Piri Reis*, was an Ottoman navigator, geographer, and cartographer. Today, He is best known for his maps and nautical charts collected in his *Kitab-ı Bahriye* (Book of Navigation). This book contains detailed information about early navigation techniques as well as relatively accurate nautical charts for the time.

Hapgood's thesis to the effect that he recognized a 90° shift that abruptly moves back and forth with each cycle.

Further standard works concerning cyclic Earth transformations come from *Emanuel Velikovsky*.¹ Even if his theses, as far as the triggering mechanism for a pole shift is concerned, are disproved mainly, he has nevertheless contributed enormously to understanding the cycles with his documentation of anomalies, which point to a short-term transformation of the Earth. A final publication that must be mentioned is the book “World in Peril” by *Kent White*, who wrote about his father’s activities² in the context of “Project Nanook.”

Top scientist slain in hotel

SAN DIEGO — A world-renowned geophysicist on a lecture tour was found slain in his room at a city hotel yesterday, police said.

Professor Stanley Keith Runcorn, 73, of Fairbanks, Alaska, suffered fatal injuries to his head and upper body at the San Diego Hotel on Broadway, a spokesman for the San Diego Police Department said yesterday.

A native of Southport, Lancashire, in northern England, Prof.

Runcorn was once affiliated with Newcastle University in England.

He was a pioneer in the theory of continental movement, known as plate tectonics, according to Syun Akasofu, director of the University of Alaska Geophysical Institute.

He was also famous for his work in nuclear physics and earth magnetism, said William Nierenberg, former director of the Scripps Institution of Oceanography in San Diego.

“He was a prominent figure in geophysics for years, going way back,” said Nierenberg. “I’ve known of, and respected, him for 35 years.”

Prof. Runcorn died several hours before he was found about midday by a hotel cleaner.

Prof. Runcorn also sat on a committee of scientists overseeing the experimental Biosphere II “space habitat” in Arizona from 1991 to 1993.

— AP

Geologist *Stanley K. Runcorn* murdered

In his book “Fingerprints of the Gods,” *Graham Hancock*, who is

¹ In “Earth in Turmoil,” *Velikovsky* attempts to present evidence mainly from geology, biology, and other natural sciences to prove a new chronology. Mammoths, rhinoceroses, hippopotami, buffalo, and hyenas, all found together 440 meters above sea level under four-meter-thick clay deposits, as well as finds of whale bones in the middle of the U.S. state of Michigan, are dated by *Velikovsky* to post-glacial strata. Also, tilted lakes, several hundred meters thick lava layers, a meteorite zone scattered over the entire southeast of the USA, and beaches pushed back for kilometers led *Emanuel Velikovsky* to his hypothesis into the field. More in the appendix.

² *Major Maynard E. White* was the commander of the 46th/72nd Recon Squadron and head of “Project Nanook.”

passionately concerned with the whereabouts of the former advanced civilizations, also pursued the pole shift thesis. In doing so, he cites various circumstantial evidence and theories that postulate a fundamental transformation around 12,000 years ago. Within his research, *Hancock* obviously came across the hypothesis of *Professor Stanley K. Runcorn*. In a section of his book called “An Epoch of Unrest and Darkness,” the author explains the geologist’s idea that the pole shift could even be a 180° rotation. *Runcorn* published this postulate in the journal “Scientific American.” What is striking here is that the respected professor was murdered a short time later under nebulous circumstances. Was he silenced because he could have sparked a renewed interest in this field of science?

It would take a whole book to duly summarize the work of the researchers and publicists mentioned above and list their arguments. I think modern authors like *David Montaigne*¹ have already produced impressive publications summarizing the classic researchers. At the same time, we have only just arrived at the beginning and have yet to start to shed light on the current situation. The core of the research mentioned here impressively confirms that through cataclysmic transformations in the history of the Earth, climate zones are radically changed again and again. Based on all these documented facts, we must recognize that this process takes place quickly and is associated with massive floods, Earthquakes, and seismic activity. To give a small impression of this, I will list a few forensic clues that challenge the current geological paradigm of uniformitarianism.²

¹ *David Montaigne* “Pole Shift: Evidence Will Not Be Silenced”

² The principle of uniformity of processes (actualism or uniformitarianism) states that the geological processes of the present are no different from those of the Earth’s historical past—they are slow and steady in a uniform fashion.

Let's begin with the conspicuous examples piling up glaringly in front of us. The forces that created mountains are still a mystery, yet there must be an explanation for high mountain layers containing marine fossils. A tremendous power must have lifted the land with such pressure that the former sea floor is now at great heights. We find numerous examples of this worldwide in geology.¹

In contrast, we discovered remains of settlements on the floor of the North Sea, called Doggerland.² This submerged area is just one instance in a long line of examples of how entire major cities of a former advanced civilization disappeared far below sea level. Also the famous Yonaguni Monument³ must be mentioned in this context, as well as the archaeological remains of a modern megacity discovered by marine scientists 36 meters underwater off the west coast of India,⁴ believed to be over 9,000 years old. From the deposits and the traces in the rock, we know that both the Sphinx and the surrounding pyramids must have been underwater for an extended period. So, while some plates abruptly sank, others must have been lifted by tremendous forces. This elevation is indicated not only by deposited shells and corals but also by entire electoral skeletons, which we can find on hills, sometimes hundreds of kilometers from the coast.⁵

¹ *Charles Hapgood* "The Path of the Pole" p. 238

² Doggerland is the name given to a region in the southern part of the North Sea basin that formed a land bridge between Great Britain and Jutland.

³ The Yonaguni Monument, also known as the Underwater Pyramids of Yonaguni, rock formations are located in the extreme southwest of Japan, near Yonaguni Island in the East China Sea, a little more than 100 kilometers from Taiwan.

There must be a reason why “beaches” of sand, formed by the action of ocean waves, are located at altitudes of 450 meters in the mountains of Italy.¹ Scientists are still trying to understand this phenomenon and can’t agree on the speed of the process. However, looking at the evidence globally, we clearly see a short-term effect. The radical transformation can be ideally identified in polar regions, which show remnants of tropical forests on both sides.

Spitsbergen lies well inside the Arctic Circle and is now covered by snow and ice for most of the year. Nevertheless, there is ample evidence that tropical corals once grew on the shores of the island.² Spitsbergen also has significant coal deposits, indicating the island’s former temperate or tropical climate. In addition, a considerable number of fossils of water lilies embedded in lignite have been found there, also proving that the region once had a warm and marshy climate. In Greenland, plant remains were found deep under the ice sheet that still appear as if they were picked yesterday.³ How can the once-temperate climate of this Arctic region be explained? Even the name of the region indicates lush vegetation.⁴ If we assume no pole shift, the entire planet must have been red hot and abruptly switched to deep freeze mode—at least as far as the polar regions are concerned. It seems much more plausible if the poles used to be located at other places in relation to the Earth’s crust.

When *Admiral Byrd* traveled to Antarctica from 1933 to 1935, his expedition discovered imprints of leaf stems and petrified

⁴ Greenland originates from the term “green land”

wood beneath the snow and ice. *Sir Ernest Shackleton* found coal seams within 200 miles of the South Pole. Thus, more and more evidence of massive forestation in Antarctica accumulated and was continuously confirmed by the latest research. Meanwhile, it is scientifically impossible to ignore that the continent of Antarctica was a lush jungle.¹ Even if we want to believe that this must have been millions of years ago, why do sea maps, like the one of Piri Reis, exist that describe the exact coastline? Today, we only know this outline because airplanes with radar systems have scanned through the thick ice layer.

The bottom line is that the South Pole was once ice-free and lush. But this cannot be explained by a global warming phase. We still have to consider that massive reforestation does not occur where it is dark for six months of the year, a characteristic of a polar region. Also discovered near the geographic South Pole were the fossilized footprints of a prehistoric reptile.² Since reptiles are known to be cold-blooded and need the warmth of the environment to maintain their body temperature, it is evident that Antarctica once had a tropical climate. If all this is true, the continent could not have always been located at the South Pole. Popular science's only solution to explain those anomalies is to date the artifacts hundreds of millions of years ago.

Although the phenomena called ice ages are accepted, few scientists agree on how they were caused. Not only have mile-high ice sheets covered the northern North American continent as far north as New Jersey, Ohio, and Wisconsin. Europe, Africa, and India have also had their ice ages. There are many theories about the causes, but none have been proven. We are left with numerous

explanations, some plausible, others unlikely. It is believed that the last ice age ended only about 10,000 years ago. In North America, The last radical climate change that wiped out many animal species, such as the mammoths, was dated 11,000 years ago.¹ However, there is a massive gap in the overall time evaluation. We get different time approaches depending on which study or dating method one trusts.

Without going too far into the technical details, every method of age determination has its weaknesses.² Especially techniques, which are based on the decay of elements, are based on empirically determined values, which are highly extrapolated. However, external factors can accelerate this decay process. Among them are periods of increased cosmic radiation or solar activities, which are evident in the Earth's recent history. As an analogy, one could think of the following scenario. Imagine you measure the amount of microscopic pebbles that have fallen through an hourglass after five minutes. You put this number in relation to an identical clock and the sand that has passed through it in an unknown period. Let's assume that the result is, for example, 100 years. However, if there is evidence that certain factors must have caused the rate of flow to increase massively at times, then you will not arrive at a reliable result. This inaccuracy could occur due to varying sizes of the funnel opening where the particles fall through during different periods. In our analogy, this changing flow rate symbolizes the effects of cosmic radiation and the sun's activity.

Countless animals were frozen alive by the sudden freezing of the last ice age, and hundreds of thousands still lie where they died—delled frozen in the Earth. How long they have been buried

¹ "What Killed the Great Beasts of North America?" By *Michael Balter*; Science.org; Link: <https://tinyurl.com/yunhaeu8>

² The complete critique of the dating methods can be found, for example, in the book "Evolution Cruncher" by *Vance Ferrell* in chapter 6 (from page 167).

is always a theory in each case. The New Siberian Islands, located just under 200 miles off the northern coast of Siberia, are almost literally made up of the bones and remains of numerous prehistoric mammoths,¹ saber-toothed tigers, giant beavers (the size of a goat), prehistoric rhinos, buffalo, deer, horses, and other small mammals. How could so many of these animals (which were also widely found in Alaska and northern Canada) have been frozen in the ground so intact that their flesh, thousand years later, when thawed, was considered “edible?” Indeed, at a Russian scientist’s banquet at the Moscow Academy of Sciences in the 1930s, the main course was said to have consisted of “delicious” mammoth steaks.²

Another question arising from these anomalies is how the tundra in northern Siberia and Alaska could support such a large population of prehistoric animals. That only makes sense if the Arctic once had a temperate climate with lush vegetation.

On the one hand, popular science assumes that the last great ice age in some parts of the world occurred only a few thousand years ago. At the same time, the warm periods at the poles are dated to much earlier, although some remains are still considered edible. Something needs to be fixed with the model. It seems as if the dating is purposefully adapted to the geological ideology of uniformitarianism.³ Accordingly, even in the newest publications in magazines like *Nature*, most time estimations are skewed, and ridiculous theories are developed to uphold the status quo and dismiss the obvious: The cyclic Earth crust movement is factual.

¹ “White Gold from Brown Mud” by *Roman Görden*; *Spektrum Magazine*; Link: <https://tinyurl.com/yc72xx4n>

² *Charles Hapgood* “Great Mysteries of the Earth” p. 53

³ Uniformitarianism is the basic scientific method in geology. It is the opposite principle of catastrophism.

It is well known that tree rings measure tree growth through the seasons. Why do prehistoric frozen trees excavated in Spitsbergen, Norway, have no rings? Only if there were once no seasons can this anomaly be explained. But the equator is the only place on Earth with no seasons. If the Earth's equator once passed through or near Spitsbergen, then it is evident that the Earth's geographic poles, in relation to the Earth's crust, must have once been in different locations than they are today. An expedition excavating in the Canadian archipelago just a few hundred kilometers from the geographic North Pole found hundreds of frozen (not fossilized) prehistoric tree trunks buried in the sand under ice and snow as if crushed by a massive tidal wave. Beneath the surface, they found another layer of similar logs, and beneath that layer, yet another, until they uncovered nine different levels of evidence of catastrophic change.¹ Not only was the Arctic apparently once a heavily forested temperate or tropical region, but it was also subject to periodic radical upheavals. Undeniably, there have been times in Earth's history when a geological transformation has massively disrupted the living conditions of flora and fauna. Many examples suggest that such changes are always violent, dramatic, and cyclical.

Suppose one has occupied oneself long enough with the geological indications to be found alone in the works I have listed so far—at a certain point, it becomes clear that the Earth goes through cyclic and radical transformations. They cause an abrupt mass extinction of specific animals and plants, turning the climatic zones on their head. One also gets the impression that mainstream science is deliberately kept blind here. Reminiscences of 9/11 come to mind.

¹ Ken White "World in Peril" p. 187

Concerning the cycles, it is pretty similar to the official report of the Commission Report,¹ which explains how Building 7 of the World Trade Center collapsed in almost free fall, although it was not even hit by an airplane. Any amateur watching the video of the collapsing skyscraper can see a controlled demolition. No official theory is too abstruse to deny that there was a deliberate series of explosions to bring the building down.

We can observe the same ignorance of the mainstream concerning the past advanced civilizations. Suppose I had to think about summarizing all the publications of *Erich von Däniken*, *David Hatcher Childress*, *Graham Hancock*, *Brad Steiger*, *Andrew Tomas*, *Hans Bellamy*, and many other authors. In that case, I should plan at least another book. This effort would be needed to sketch the rough outlines of what can't be right about the established historiography. These researchers have argued in detail that these advanced civilizations possessed exceptional architecture, mathematics, and astronomy knowledge. We cannot conclusively understand how they constructed certain buildings to this day. How did these cultures stack irregular stones of sometimes several hundred tons with a precision that not even a sheet of paper fits between them? The Great Pyramid of Giza is probably the most

¹ The 9/11 Commission (full title: National Commission on Terrorist Attacks Upon the United States; sometimes Kean-Hamilton Commission) was a bipartisan committee of the U.S. Congress investigating the causes of September 11, 2001, terrorist attacks in the United States.

impressive structure, but Pumapunku,¹ Angkor Wat,² and Sigiriya³ must also be mentioned here.

The Great Pyramid of Giza

Of course, one should not mindlessly accept all the involved theories about extraterrestrial teachers and gods from the sky. I

-
- ¹ Pumapunku, also Puma Punku (Aymara and Quechua for “Gate of the Puma”), is a strategically aligned, completely artificial, terraced platform mound that houses a labyrinthine system of monumental canals and on which are located, among other things, a massive structure — now in ruins — and a sunken courtyard. Pumapunku is part of the Tiwanaku archaeological site near the village of the same name in western Bolivia. Tiwanaku is 3,850 meters above sea level in the Altiplano plateau near Lake Titicaca. Within Tiwanaku, Pumapunku lies southeast of its twin structure Akapana.
 - ² Angkor Wat (/æŋkɔːr ˈwɒt/; Khmer: អង្គរវត្ត, “City/Capital of Temples”) is a temple complex in Cambodia, located on a site measuring 162.6 hectares (1,626,000 m²; 402 acres). The Guinness World Records considers it as the largest religious structure in the world.
 - ³ Sigiriya or Sinhadgiri (Lion Rock Sinhala: සීගිරිය, Tamil: சிகிரியா/சிங்ககிரி, pronounced see-gi-ri-ya) is an ancient rock fortress located in the northern Matale District near the town of Dambulla in the Central Province, Sri Lanka.

also do not go along with every thesis of *Erich von Däniken*, but his arguments, which point to earlier high technology, are not to be dismissed. You can find additional content regarding this issue in this book's appendix. Nevertheless, in the context of the Phoenix Hypothesis and the cycles in particular, it is enough for me to acknowledge that these highly advanced cultures existed and that their abrupt demise is often wholly unexplained. *Charles Hapgood* also understood this phenomenon and proposed an interrelation with the pole shift in his books.

In addition, the ancient civilizations partially understood the recurring transformations and passed down this wisdom in mostly symbolic form. The great pyramid of Giza contains the mathematical key of the cataclysmic cycle encoded in its geometry. This may be the reason we find this structure on the Dollar bill in connection with the promise of a new world order.

Jacque Grimault has written a remarkable book about this mathematical correlation, entitled "The Revelation of the Pyramids." A documentary film based on his work plausibly visualizes this geometric concept. Anyone with an affinity for these ancient advanced civilizations must have seen this film. Also, a significant stele in the complex of Gebökli Tepe symbolizes an important star constellation that marks a reset point. Even conservative estimates suggest that the construction occurred around 6,000 - 8,000 years before *Christ*.

I am aware that I am only feeding you fragments of extremely complex theses here and that this can be frustrating. As I emphasized several times, I do not intend to write an all-encompassing treatise on all sub-areas but show you where I got my puzzle pieces from, drawing the overall picture. I trust your curiosity to deal more deeply with the matter and get familiar with the concepts involved. You will also find additional data and links on my website if you feel intellectually unsatisfied at some point.

5.2 The Present Pole Shift Research

One of the most interesting independent research groups observing the Earth's inner workings is the Suspicious Observers movement, founded by *Ben Davidson*. He is the central figure in today's catastrophism, cross-referencing data from his predecessors with current research. He runs a popular YouTube channel with ongoing updates and the latest data sets. They also regularly publish comprehensive papers, books, and video clips. In early 2022, the movement released a documentary called: "The Cycle is Over"—the title sums up their position. This film is their follow-up work on their famous "Earth Catastrophe Cycle" video series.

Because of their academic professionalism, the Suspicious Observers have an almost impeccable reputation in the scientific circles dealing with Earth changes. There is no better place to go if you want to devote purely scholarly attention to the pole shift. At the center of their speculation as to what might trigger a cataclysmic Earth's crustal displacement are the activities of the Sun. Indeed, our star is influenced by its own cycles and cosmic radiation, which in turn has an enormous impact on the processes inside the Earth.

Ben Davidson is confident that we are on the verge of a cataclysmic Earth crustal shift, and he estimates that 2030 to 2040 is the most likely period in which such an event could occur. Although Suspicious Observers is considered the elite of independent cataclysm research, some analysts believe that *Ben Davidson's* group is merely controlled opposition and operates as a gatekeeper institution. There is also talk of a "limited hangout" in this context—similar accusations also made towards certain

Project Camelot insiders.¹ However, most of the criticism is not about the pole shift itself but the ultimate trigger and the time frame the cataclysm is set to. The accusations against Suspicious Observers arise, among other things, from the fact that the topic of “Nibiru” is almost completely ignored. This omission may have different reasons, but it is striking since this Planet X is, for many researchers in catastrophism, the hottest candidate to explain a cyclic pole shift. An excuse for this ignorance could be that the Nibiru subject is “contaminated” with presumably intentionally scattered false information, and the reputation of the topic is loaded with numerous prejudices.

Moreover, Planet X can’t be clearly observed without the help of expensive high-tech equipment, which ideally would have to be moved into orbit or to the South Pole. The institutions such as NASA, which have such equipment available, claim they have no factual knowledge. But more on this later.

Before I go into more detail about Suspicious Observers, respectively *Ben Davidson* and his theory, I would like to mention a few other researchers who have struck me as intellectual authorities in independent research of cataclysmic cycles. First, *Dieter Broers* published early on in the German-speaking world and was my foster father in this field for years. This inspiration resulted from working with him on various documentary film projects illuminating the cycles’ partial aspects. However, at a certain point, *Dieter Broers* increasingly focused on the event’s spiritual interpretation without further detailing the worldly implications. I will explore this holistic view at the end of the book.

Also, I must mention *Jason Breshears*, who has become known as *Archaix*.² It was his work that made me aware of the fact that

¹ more about Project Camelot in chapter 5.6

² Official website of *Jason Breshears*: <https://archaix.com/>

the cycle, expected by the elites, was associated with the Phoenix in ancient times. It is from this fact that the hypothesis borrows its name. His research inspired me greatly, so he shall be treated here first.

5.3 Jason Breshears and the Phoenix

Jason M. Breshears is an expert in ancient literature and synchronizing old calendar systems. His wealth of knowledge and the gigantic data collection of his research has no equivalent. The exceptional circumstances that allowed him as a single individual to consolidate such a treasure trove of data are, unfortunately, also the most considerable criticism of his person. However, his story is so fascinating that I would like to summarize it.

Jason Breshears, as the son of a minor mother, was given up for adoption to a fundamental Baptist family. From an early age, he was indoctrinated into a radical interpretation of the Bible that controlled every aspect of his life. His foster mother served in a high position in the local church congregation and drilled her son from the beginning to study extensive religious texts and meticulously summarize the content. Young *Jason's* near-photographic memory helped him internalize the names, places, and times within the documents. Even without his mother's insistence, he loved to read. However, he had to regularly work through a considerable volume of Christian literature to earn the right to a specially chosen book of his own device. This sometimes inhuman training practically shaped *Jason* into a top "text-analysis athlete."

In the final analysis, *Breshears* rebelled as a teenager against the community's rigid dogmas and left the family's constraints. He drifted aimlessly, earning a living partially as a day laborer. Despite rebelling against the old Puritan ideology of the Baptist church, he initially remained true to his instilled faith. However,

this did not keep him from going astray. This downward spiral resulted in an extended criminal record of minor convictions.

This trajectory escalated into a situation¹ that earned him nearly 30 years in prison. Herein lies the major criticism that makes *Jason Breshears* a polarizing figure. Who would trust a convicted capital offender who had sprung from religious extremism? But of all things, here lies the second tragic key that allowed *Jason* to become *Archaix*. Fate banished him to several correctional facilities that practically overflowed with ancient books. Entire wings of Texas prisons were stocked to the ceiling with sometimes rare writings from old renowned libraries that the state had to close.

A “high-performance reader” was practically locked up in libraries with exquisite ancient and classical texts for almost three decades. In addition, his Christian indoctrination commanded him to derive biblical history from old historical books. Retrospectively, one would like to believe in higher providence. His imprisonment provided him with ample material and time. Moreover, he became the archivist of the prison libraries where he was incarcerated and thus could freely exchange books between other institutions. If he found references in his studies to publications not available in his facility, there were ways to obtain them from other units.

Even the most passionate professors and scholars are forced at some point to devote themselves to mundane daily life. These obligations are inevitable because they may have to lecture, have a family life, or even lose themselves in distraction at times. *Jason* had no diversion and could only sit in his cell and read. For him, a

¹ A carjacking ended in a kidnapping situation that resulted in the maximum sentence, even though the person involved was unharmed and personally turned in to police by *Breshears*. Decisive factors in the sentence were his criminal record and the intentions of the accomplice.

sense of mental freedom always came with a concentration on written content. The imprisoned body evaporated in the background noise. The story's immersion took over his mind and allowed him to dive into other worlds.

After a short time, *Jason's* fanatical attempt to prove the Bible's historical authenticity failed. More and more discrepancies appeared, which could not be ignored even by a selection of the sources. He realized that the Bible was full of manipulations. This hindsight ushered a painful break with his old paradigm, which had been forced into his mind from early childhood. The phenomenon that emerges in such cases is called cognitive dissonance.¹ In this case, an intellectual conviction collides with a new insight that can no longer be ignored in terms of validity. Most truthers know this feeling, although this effect can manifest differently. The more rigid and complex the old worldview was, the more jarring the breakdown when the mental construct implodes. But *Jason Breshears* did not give up on himself, only on his faith.

Breshears continued to study and absorb everything he could find. Thus, he had nothing better to do and plenty of time on top of that. *Jason* left the Christian context and opened himself to all philosophical-religious writings. This shift could be understood as a Gnostic approach. He read the Koran in various available translations and devoted himself to Jewish and Vedic literature. He

¹ In social psychology, cognitive dissonance refers to a state of feeling, perceived as unpleasant, that arises because a person has incompatible cognitions (e.g., perceptions, thoughts, opinions, attitudes, desires, or intentions). Cognitions are mental events that are associated with an evaluation. Conflicts (called "dissonances") can arise between these cognitions.

not only studied the famous Bhagavad Gita,¹ but worked his way through the entire Mahabharata.² Even the most devout Hindus cannot claim that. Further, he read various philosophical and scientific standard literature and found scarce antique writings in his correction facility. In short, anyone who looks at *Jason Breshear's* reading list can only be respectfully amazed. This knowledge reflects in his own books and lectures.

He developed a complex understanding of history based on cyclical resets within that process. From my experience, one can come to the same fundamental insights that shape *Jason Breshear's* interpretation, even with a fraction of his reading time. You must find the “good” books first—still, you may not have the argumentative tools to defend your position across all intellectual disciplines. *Jason Breshears* has that all-encompassing knowledge.

I don't want to praise the man to the skies because he also has flaws—like all humans and I would not subscribe to all his conclusions. Still, I believe he is the quintessential authority for reappraising the cataclysmic cycles based on ancient literature. Therefore, I regard him as far superior compared to people like *Zecharia Sitchin*³ or *Graham Hancock* in terms of knowledge about the old world and reset cycles.

¹ The Bhagavad Gita (Sanskrit, f. “the song of the sublime”), shortened also only Gita, is one of the central writings of Hinduism. It takes the form of a spiritual poem. The text, which was probably written between the 5th and 2nd century B.C., is an amalgamation of several different schools of thought from India at that time, based on the older Vedas (Early Vedic writings ca. 1200 B.C. to 900 B.C.), the Upanishads (Late Vedic writings ca. 700 B.C. to 500 B.C.), orthodox Brahmanism (ca. 800 B.C. to 500 B.C.), yoga, and others, but is closest in thought to the Upanishads.

² The Mahabharata (“the great story of the Bharatas”) is the best-known Indian epic. It is believed to have been first written down between 400 BC and 400 AD, but is based on older traditions. It comprises about 100,000 double verses.

³ see appendix for more information on *Zecharia Sitchin*

It should be clear, however, that even a man like *Jason Breshears* has challenges consolidating his accumulated knowledge, which he has acquired over decades, into a consumable form. To this end, he wrote numerous books, revising them repeatedly in subsequent works as his ongoing research produced a more nuanced picture. He remained open-minded after his Christian doctrine fell apart—a seeker always ready to expand his horizons. This tendency becomes evident in his work on simulation theory. He has proven his intellectual evolution in his various publications as he, for example, has already released hundreds of videos on his channel “*Archaix*” on YouTube—attracting a large audience. Because of this mass of information, I will not summarize his argumentation of the cyclic transformations here. However, one cannot get past *Jason Breshears* if one wants to dedicate to a deeper understanding of this phenomenon. I will certainly return to his work when I formulate my extended Phoenix Hypothesis, which I plan to address in a dedicated book.

From his research, I want to highlight that he expects a fundamental reset from 2040 to 2047. This estimation arises merely from his analysis of old books and ancient writings, which allows synchronization of the numerous calendar systems with the coded cycles. Surprisingly, this time frame coincides with the work of *Douglas B. Vogt* of the Diehold Foundation and the forecasts of the Suspicious Observers. These estimates, in turn, are based on natural history data sets from the last several decades. Let’s take a closer look at the group around *Ben Davidson* since *Douglas Vogt* follows a comparative approach but is less popular.

5.4 Suspicious Observers

Ben Davidson, the founder of Space Weather News and Suspicious Observers, is currently the most notable authority on cataclysmic cycles in the alternative sector. If you want to confirm the basic

premise of the Phoenix Hypothesis, you can't go past him. His work gained enormous attention with the release of his six-part video series on the Earth's cataclysmic cycle. In it, *Davidson* began by discussing the 57-page book titled "The Adam and Eve Story" by *Chan Thomas*. I had already mentioned it in my classic literature review on the subject. This publication was classified by the CIA sometime shortly after its publication in 1963 and was re-released on June 24, 2013, with a digital version on the CIA's website. *Thomas's* analysis of the cyclic pole shift differed significantly from what *Charles Hapgood* had previously proposed in his influential book, "The Earth's Shifting Crust" from 1958.

According to *Davidson*, *Thomas's* more accurate explanation of how a pole shift occurs led the CIA to censor this book. "The Adam and Eve Story" was published by Emerson House in 1963. A modified version appeared in 1965 and was reprinted by Bengal Tiger Press in 1993. It is not fully transparent when, why, or how the CIA kept *Chan Thomas's* book under lock and key, but the fact that the CIA released a declassified version in 2013 is still significant.

In part one of his video series, *Davidson* contrasts *Hapgood's* mantel displacement hypothesis with the pole shift described in *Thomas's* book, which the CIA suppressed. *Hapgood* wrote in "The Earth's Shifting Crust" of a mantel movement of up to 40° that could repeat about every 5,000 years, with earlier geographic poles varying with each crustal shift on the Earth's surface. In contrast, *Thomas* wrote of a massive dislocation of nearly 90° that would move both pole regions into the tropics in less than a day, then return to their former positions after the following cycle:

"In ¼ to ½ a day the poles move almost to the equator, and all hell lets loose. The atmosphere and oceans don't shift with the shell – they just keep on rotating West to East – and at the equator that speed is 1000 miles per hour. It has to be, normally, to make one rotation per day. So, while the shell shifts with the poles going toward

**the equator, the winds and oceans go eastward,
blowing across the face of the Earth with super-
sonic speeds, inundating continents with water
miles deep (...)**

**“You can see, then, that ice ages are not a matter
of advancing and retreating ice; it’s simply that
different areas of the Earth are in polar regions at
different times, for different durations of time,
with the changes between positions taking place
in a fraction of a day.”**

—“*The Adam and Eve Story*” p.13-14

Thomas’ conclusion that there are cyclic pole shifts of nearly 90° that move the poles back and forth over millennia was cited by *Davidson* as the main reason the CIA classified *Thomas*’ work. If the north and south poles were moving back and forth at 90°, there would be little evidence of earlier pole shifts because they would be buried under thick layers of ice. The traces in the temperate regions are explained by ice ages, which testify to a global cold period.

This conclusion led *Davidson* to the science of paleomagnetic¹, where he found and cited a number of scientific articles examining paleomagnetic data from volcanic hotspots. Among those papers was a highly respected 1985 paleomagnetic study entitled “True polar wander: An analysis of Cenozoic and Mesozoic paleomagnetic poles,”² which found that the pole had moved 22° + or 10 degrees over the last 180 million years. This distance was far less

¹ Paleomagnetism (colloquially fossil magnetism) is the preservation of various characteristics of the Earth’s magnetic field in rocks at the time of their deposition or formation.

² AGUpubs paper by *Jean A. Andrews*; link:
<https://doi.org/10.1029/JB090iB09p07737>

than the hypothesis of a 40° pole migration proposed by *Hapgood* for a period of about 5000 years.

A later 2001 study titled “Stability of the Earth with respect to the spin axis for the last 130 million years”¹ concluded instead that “the time-averaged position of the spin axis has not deviated by more than ~5° over the last 130 million years, suggesting that Earth’s mantle mass heterogeneities have not changed fast enough to cause true polar wandering.”² *Davidson* cited these papers and a 2018 study as key elements of the scientific evidence refuting *Hapgood*’s polar migration hypothesis.

However, *Davidson* indicated that the academic data from paleomagnetic studies did not address *Thomas*’ theory that the poles move back and forth—flip-flopping—throughout Earth’s history. This conclusion resulted in a faulty basic assumption. This fact made it appear that the poles had not moved at all over millions of years, as the researchers incorrectly assumed:

“All work crushing the theory utilizes these flawed studies, especially the long term average pole position and none address the problem of a ping pong shift where you would have that time average pole position appearing to be in the same position over millions of years.”

Davidson even goes so far as to suggest that *Hapgood*, who worked for the CIA’s predecessor, the Office of Strategic Services,

¹ ScienceDirect Paper; *John A. Tarduno, Alexei V. Smirnov*; Link: [https://doi.org/10.1016/S0012-821X\(00\)00348-4](https://doi.org/10.1016/S0012-821X(00)00348-4)

² “True polar wandering” is the rotation of a planet or moon around its rotation axis, which changes the geographical position of the north and south poles, i.e., “wanders.” It is also referred to as “polar wobble.”

during World War II, may have conducted a “limited hangout”¹ with his 1958 book. This diversion could be intended with the calculus to get some of the truth out to the public, but in a way that could ultimately be discredited if the publication provokes undesirable reactions. To be fair, however, it should be noted that *Chan Thomas* also had close contact with the military. Several generals are mentioned in the acknowledgments in an abridged 1993 version of 127 pages.

Thomas’ dedication goes first to his wife but is followed by *General Harold W. Grant* and his “wonderful family,” *General Curtis Lemay*, *Admiral Taylor*, and the general staff of the time, without whose “encouraging inspiration” the book would not exist. So when we talk about manipulation by intelligence agencies, *Rufus Lackland Tayler Jr.*, in particular, had his fingers in several such organizations at once. He was director of the Navy’s intelligence service, the Defense Intelligence Agency, and still became deputy director of the CIA at the end of his career.

Davidson went on to cite a book that I also introduced at the beginning of the argument as a vital source. In 1994, “World in Peril” was published, which deals with the once classified information of a polar explorer named *Major Maynard White*, who told his son *Ken* (the author of the book) about secret Pentagon meetings in 1948, where the potential suppression of evidence for cyclic pole shifts was discussed:

**“At one of the scientific meetings that Major
White attended in the Pentagon in early 1948, the**

¹ According to *Victor Marchetti*, a former special assistant to the deputy director of the Central Intelligence Agency (CIA), a “limited strip tease” is espionage jargon for a popular and frequently used ploy by intelligence professionals. When the veil of secrecy becomes permeable, and they can no longer rely on a fake cover story to misinform the public, they resort to admitting part of the truth—sometimes even voluntarily—while still managing to withhold the crucial and damaging facts in the case.

scientists discussed the advisability of alerting the public to the pending polar-flip phenomenon. None of the scientist would agree to withhold the information from the public, but, on the other hand, neither could they agree on how to release it. The knowledge of this phenomenon, some felt, could in itself destroy the moral fiber of society. Their fears were apparently unfounded when, in the early 1950s, information about the flip phenomenon was released in both a newspaper column and a magazine article, but surprisingly generated no responses from an apparently stunned parochial or incredulous public.”

—Ken White

Given the amount of scientific data *Davidson* presents in his Earth Catastrophe Cycle series, it is clear that physical pole shifts of approximately 90° have been historically recorded and that this was known to government agencies as early as 1948. This evaluation brings us to the crucial question of which theory regarding the triggering mechanism *Ben Davidson* prefers. The old concept that ice masses lead to an imbalance in the axis of rotation was already rejected by *Einstein*, but also *Hapgood* died without having found a satisfying answer. *Chan Thomas*, on the other hand, had the following explanation to offer:

“(…) once every few thousand years neutral matter escapes from the 860-mile [1385 km] radius inner core into the 1300-mile [2092 km] thick molten outer core, and there is a literal atomic explosion inside the Earth. The explosion in the high energy layer of the outer core disrupts completely the electrical and magnetic structure in both the molten outer core and the outer 60-mile thick molten layer. Finally, the ice caps are allowed to pull the shell of the Earth around

the interior, with the shallow molten layers lubricating the shift all the way.”

—“*The Adam and Eve Story*,” p.14

Thomas compares the “neutral matter” escaping from the Earth’s inner core to the plasma in a solar flash,¹ as they are based on the same universal principle that he believes is found in the atom and galaxies. Building on this, *Thomas* suggests that the trigger mechanism that triggers the Sun to emit a solar flash or micro nova² is similar to what causes the Earth’s core to release energy waves. These energetic waves thus shift both the magnetic and physical poles in cycles of up to 90°.

In “World in Peril,” the triggering mechanism is described as a reversal of the Earth’s magnetic field, as cited by *Davidson*:

“It was determined through repeated experimentation that as the magnetic pole approached the geographic pole, the magnetic pole would at some point accelerate its rate of convergence as though pulled toward the geographic pole by centripetal force and jump to coincide; but instead of the poles coinciding, the magnetic pole would rapidly ‘flip’ around the geographic pole, them spin off towards the equator as though by centrifugal force, ending up at a position where the two axes assumed an approximate 89-degree divergence. After this polar ‘flip’ occurred, the

¹ A solar flare is a structure of increased radiation within the chromosphere of the Sun, fed by magnetic field energy. A flare or chromospheric eruption is a simple plasma magnetic field arc.

² Remnants of stars do not only perish in a violent stellar explosion. If they explode incompletely, a micro nova is formed, which is small in cosmic comparison.

axes would then gradually begin to reconverge over a long period of time.”

—Ken White

According to classified information obtained by *Major White* and his USAF reconnaissance unit¹ in the Arctic, the magnetic pole shift would be the trigger for a crustal shift that would result in a geophysical pole shift of nearly 90°, as explained in the description for *World in Peril*.

“World in Peril ... provides an explanation, based on the unit’s findings, of how Pentagon scientists determined our globe has evolved in prehistory, and how another Earth-reshaping cataclysm is imminent! Now we can understand why mammoths and mastodons found in the arctic permafrost had been instantaneously frozen with subtropical vegetation in their mouths and stomachs. World in Peril may be the only book in print that accurately explains the elusive triggering mechanism for the phenomena known to scientists for over 200 years as ‘crustal shift,’ and what it implies.”

—Ken White

It is important to emphasize that the trigger mechanisms in *Thomas’* “The Adam and Eve Story” and *White’s* information in “World in Peril” are complementary. White essentially described an internal geologic process in which a magnetic pole reversal would cause a crustal shift so that the two sets of poles (magnetic and geophysical) would briefly settle at opposite ends of the equator. The magnetic poles would then gradually align with the

¹ United States Air Force 46th/72nd Reconnaissance Squadron

new geophysical north and south poles until the cycle repeated and the former pole regions returned to their former positions.

Accordingly, an unknown mechanism inside the Earth would trigger both the magnetic pole flip and the crustal shift, based on information obtained by *White* and suppressed by national security agencies. *Thomas*' book explains the internal mechanism that triggers the pole shifts. The neutral matter he describes is basically the functional equivalent of a micro nova or solar flare emitted from Earth's interior. Consequently, any indication that the Earth's core is generating something similar to increased solar activity is an essential clue to a pole shift occurring in the near future.

Davidson's six-part series delivers persuasive arguments for a connection between cyclic micro novas and historical pole shifts of nearly 90°, which occur in a back-and-forth rotation that makes it appear that the present-day poles have not moved in their respective positions for millions of years, as paleomagnetic studies falsely imply. Moreover, his emphasis on the information proposed by *Thomas* and *White* leads to the conclusion that internal geologic events trigger the crustal shift. Accordingly, the geological event would not be initiated by external interactions, such as ice accumulation at the poles. This finding causes him to focus on something happening inside the Earth's molten core.

Davidson's historical data and analysis suggest that certain factors simultaneously trigger eruptions of "neutral matter" from the Earth's core and the Sun in the form of micro novas. Accordingly, he suspects a kind of solar flash correlating with the physical shift of Earth's surface. This interconnection finally leads us to the role of cosmic radiation as an elusive triggering mechanism and to the recent scientific data. These also point to a possible link

to the mysterious global seismic waves like those recorded on Myotte.¹

If you feel like I do, then one can accept the Earth's internal processes in connection with solar activities and cosmic radiations as a suitable explanation. *Ben Davidson* goes into more detail about these interactions in his books and videos, but for a non-geologist, these are all mystical concepts that require prolonged study. However, there is no question that the magnetic poles are "moving" increasingly faster, and our Earth's magnetic field is thereby weakening. Based on this fact, the warning of the Suspicious Observers cannot be dismissed. Because even if no physical pole shift were to occur, we are still running toward a point that makes us highly vulnerable to cosmic radiation and coronal mass ejections (CME) from the Sun.

Since Earth's magnetic field acts like a shield, if this trend continues, even a comparatively small solar flare heading toward Earth could cause a catastrophic breakdown of our sensitive high technology. Power grids would collapse, and microchips would burn out. We would be back to the beginning of the 19th century overnight. Past events have demonstrated that even short phases in which New York, for example, had to manage without electricity² showed a breakdown of order. Just 25 hours of the blackout was enough to bring the city to the brink of collapse. Hundreds of stores were looted, and thousands of fires led to billions in damage. If you extrapolate this situation to months or

¹ The 11th of November 2018 Mayotte seismic anomaly is a seismic event of unknown origin that occurred about 24 kilometres (15 miles) off the coast of Mayotte, an overseas department and region of France in the Indian Ocean.

² Unlike other blackouts in the region, namely the 1965 and 2003 Northeast blackouts, the 1977 blackout was confined to New York City and its immediate environs. Unlike the 1965 and 2003 blackouts, the 1977 blackout also resulted in citywide looting, and other criminal activity, including arson.

even years on a global scale, it is questionable whether this catastrophe could be controlled at all.

The last major coronal mass ejection to hit Earth is considered to be the so-called Carrington Event. From August 28 to September 4, 1859, several unusually strong solar flares occurred, observed by astronomer *Richard Carrington* and others, led to a tremendous natural spectacle. The discharged matter of the coronal mass ejections had a velocity of over 2000 km/s. This powerful wave reached the Earth about 17.5 hours later. During the night of September first and second, the most powerful geomagnetic storm to date was recorded. It led to auroras, which could be observed even in Rome, Havana, and Hawaii. In the higher latitudes of northern Europe and North America, such high voltages were induced in telegraph lines that strips of paper were set on fire in the receivers. The telegraph network was massively affected. Similar phenomena were also recorded in Central Europe, albeit weaker.

If this solar storm were to hit our current infrastructure, the consequences would be catastrophic—at least for one side of the globe. But back then, no digitized society was dependent on electricity, running water, and credit card payments. Moreover, in 1858, the Earth's magnetic field was likely much more robust than it is today. Even the most minor aspects that hold our modern society together are now based on delicate electronics and data communications. Supply chains and public order would collapse quickly in the event of such a solar storm. So it doesn't necessarily take a pole shift to justify DUMBs and secret planning. Whatever our magnetic field is doing, it is heading for a threatening situation.

Since we would be temporary without any magnetic field during a pole flip, the interaction on our electronic infrastructure

should not be underestimated. Since the human psyche¹ is very susceptible in this regard, the extended implications are hard to grasp. Even if one cannot imagine mysterious processes in our planet's interior leading to a shift in the outer layer, the Carrington event is hard to ignore. Yet, there is another popular theory that could explain an Earth mantle movement, but this one is highly controversial. Nevertheless, Planet X must be addressed in the context of the possible pole shift triggers.

5.5 Planet X or Nibiru

Although it is one of the most ridiculed topics concerning the pole shift, the Nibiru theory is still worth a deeper investigation. There is a wide range of publications, like the books of *Zecharia Sitchin*² that explore the subject mythologically, along with countless channelings (e.g., *Nancy Lieder* and *Zetataalk*) and reports from whistleblowers (e.g., *Robert Dean*) who claim that this Planet X is at the center of Earth's cataclysmic cycles.

One can see the Nibiru thesis as a consistent further development of the theory of *Hapgood*. The big difference is that an object is made responsible for the cyclic Earth changes, which is called "Wormwood" (Revelation 8:11) in the Bible. In Sumerian lore, popularized by *Zecharia Sitchin*, this celestial body is called "Nibiru"—a name that has gained acceptance among cataclysm researchers.

¹ MDPI Paper "Human Psychophysiology Is Influenced by Low-Level Magnetic Fields: Solar Activity as the Cause;" link: <https://doi.org/10.3390/atmos12121600>

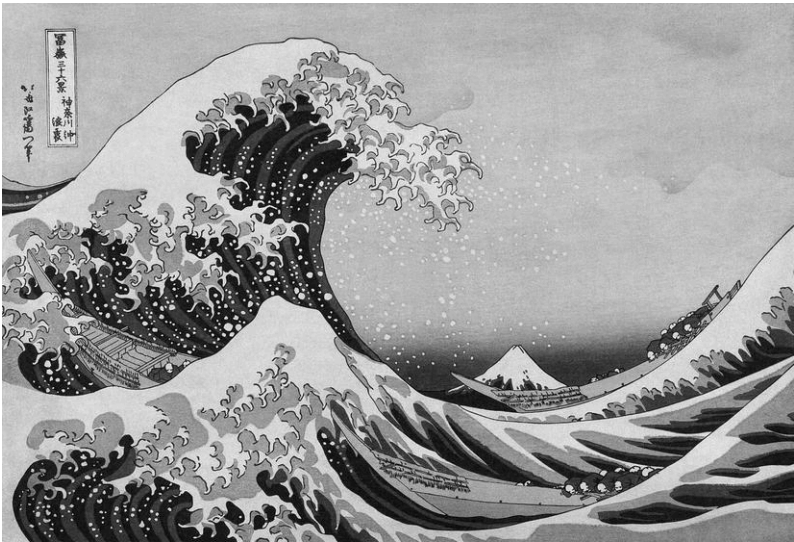

² *Zecharia Sitchin* claimed in his books that by translating Sumerian cuneiform texts, he found out that Nibiru, describes a planet to be inhabited by the Anunnaki (an extraterrestrial race) and cyclically comes close to the Earth. (see appendix for more information)

C. D. II. 373. 2 H. W. 67

The star "Wormwood" depicted according to Revelation 8:11.

Within the astronomer’s community, one speaks of Planet X or, meanwhile, of Planet 9—after Pluto was deprived of the planetary status. Just to make the name confusion complete, it is essential to mention that the first official academic theory on the subject was formulated in 1940 by Chilean astronomer *Carlos Muñoz Ferrada*¹ (1909-2001), who labeled the hypothetical object “Hercolubus.” Similar to *Hapgood*, the Nibiru researcher recognized that the story portrayed in the Bible of *Noah* and the deluge, well-known in

“The Great Wave off Kanagawa” by *Katsushika Hokusai*, Edo period—great flood myths are also apparent in Asia

the Occident, describes a phenomenon that presents itself due to the many traditions of even older cultures as a global event and left profound traces in the geology. Therefore, the “great flood” is not just a local anomaly.

¹ More information on *Carlos Muñoz Ferrada* in the appendix

According to some analysts, such as *Hans Bellamy*, over 250 significant sources from all major cultures worldwide speak of a massive flood in their mythology. These legends are often associated with celestial phenomena, such as in Hopi lore, where a blue and red “kachina” is reported as a precursor of the geophysical event. Also, the cataclysmic descriptions from the *Kolbrin Bible*¹ speak of a red object in the sky, which the Egyptians call the “Destroyer.” In other ancient writings, we can find descriptions of a red phoenix or dragon in the “heavens.” Even in European prophecies, we often read of spectacular signs in the sky before all hell breaks loose.

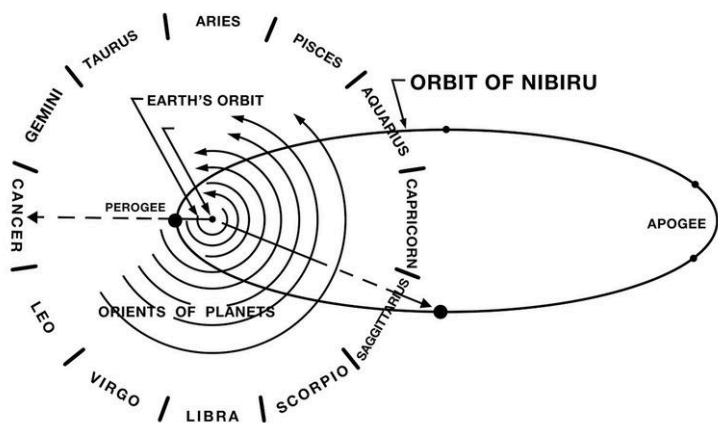

What complicates the subject further is that Nibiru does not appear as a single phenomenon. *Carlos Muñoz Ferrada* already spoke of a whole planetary system whereby his “Hercolubus” revolves around a black sun. The term “brown dwarf,”² which defines the failed star more clearly, was not yet established in 1940. This black sun is called “Nemesis,” and Nibiru is only the outermost of 9 objects which influence each other. In addition, the formation includes several moons and has a tail of iron oxide dust that produces red coloration. Therefore the interpretations of a “dragon in the sky” or a “Phoenix” could originate. The entire Nibiru system, in turn, moves in an extremely long elliptical orbit around the sun and its black twin. Therefore, it takes about 3,600 years to reach our immediate proximity once more. This summary

1 The *Kolbrin Bible* is about 3,600 years old and collects various ancient writings. The first six books are called the “Egyptian texts” and were written by Egyptian academics after the Hebrew Exodus. The last five books are called the “Celtic Texts” and were written by Celtic priests after the death of *Jesus*.

2 Brown dwarfs are celestial bodies that occupy a special position between stars and planets. Their masses are less than 75 Jupiters and are therefore insufficient to initiate hydrogen fusion in their interiors, as in the lightest stars, the red dwarfs. On the other hand, with at least 13 Jupiter masses (i.e., more massive than planetary gas giants), they are heavy enough for deuterium fusion to begin.

is roughly the core thesis about Planet X, although Nibiru researchers do not agree on all details.

To what extent Nibiru's gravitational forces thereby unfold a devastating interaction with the Earth depends on which side of the sun our planet is located when it crosses the solar system. This factor would explain why the effects were much more severe 11,000 – 12,000 years ago, compared to how the cycle manifested itself, for example, at the end of the Bronze Age (about 3,600 – 4,000 years ago). In any case, the electromagnetic and gravitational interaction of the system is understood to have triggered the cyclic pole shift. But what circumstantial evidence is there that this object exists?

Carlos Muñoz Ferrada was the first astronomer in 1940 to conclude that there must be other unknown objects with significant gravity in our solar system. This thesis was first confirmed by the Pioneer 10 (1972) and Pioneer 11 (1973) probes when an unknown gravitational source deflected both trajectories. Also, based on long-term observations of Uranus and Neptune, scientist came to a similar conclusion. Thus still in 1988, the NASA astronomer *Dr.*

John D. Anderson reported in an interview with the Victoria Advocate¹:

“We (NASA) have a 90 to 99 percent confidence that Uranus and Neptune are perturbed, and a candidate for that is a single Planet X.”

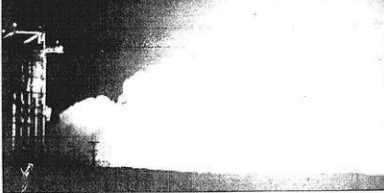

—Dr. John D. Anderson

Also that year, Dr. Robert S. Harrington (chief astronomer of the US Naval Observatory) published his paper entitled “The Location of Planet X.”² The confidence of the two NASA astronomers stemmed in part from data gathered by the 1983 IRAS mission that launched an infrared satellite into space. The first results of this mission were accredited by the New York Times on January 30, 1983, with the following words:

U.S. and French technicians preparing the infrared Astronomical Satellite before its launch last week.

Clues Get Warm in the Search for Planet X

By JOHN NOBLE WILFORD

SCHMIDTING and three beyond the furthest reaches of the known solar system seems to be dragging on Uranus and Neptune. Some gravitational force, perhaps perturbing the two giant that may be the long-sought Planet X.

Evidence accumulated in recent years has led several groups of astronomers to resume the search for the 10th planet. They are dividing their time between observations with the 200-inch telescope at Mount Palomar in California. They are tracking two Pioneer spacecraft, now approaching the orbit of distant Pluto, to see if variations in their trajectories provide clues to the source of the mysterious force. And they are hoping that a sensitive infrared telescope launched last week will detect heat "em-

issions" from the planet, or whatever it is out there.

The Infrared Astronomical Satellite was launched into a Sun-to-high polar orbit Tuesday night from Vandenberg Air Force Base, Calif. It represents an \$80-million venture by the United States, Britain and the Netherlands, the first such task in seven months, the first step toward a wide-ranging survey of nearly all the sky, which is expected to be finished in mid-1984 and completed by the atmosphere. Scientists hope that the new satellite will show thousands of infrared-emitting objects that have gone unrecorded — stars, interstellar clouds, comets and, with any luck, the object that pulls on Uranus and Neptune.

The last time a serious search of the skies was made as to the discovery in 1930 of Pluto, the ninth planet, that the story began more than a century before that, after the discovery of Uranus in 1781 by the English astronomer and musician William Herschel. Until then, the

planetary system seemed to end with Saturn.

As astronomers observed Uranus, noting irregularities in its orbital path, many speculated that they were witnessing the gravitational pull of an unknown planet. So began the first planetary search based on astronomical predictions, which ended in the 1840's with the discovery of Neptune almost simultaneously by English, French and German astronomers.

But Neptune was not massive enough to account entirely for the orbital behavior of Uranus. Indeed, Neptune itself may be affected by an still more remote planet in the 10th century, two American astronomers, William H. Pickering and Percival Lowell, predicted the size and approximate location of the then-Nepertean body, which is identified as Planet X.

Years later, Pluto was detected by Clyde W. Tombaugh working at Lowell Observatory in Arizona. Several astronomers, however, suspected it might not be the Planet X of prediction. Subsequent observation proved

them right. Pluto was too small to change the orbits of Uranus and Neptune; the combined mass of Pluto and its recently discovered satellite, Charon, is only one-fifth that of Earth.

Recent calculations by the United States Naval Observatory have confirmed the orbital perturbations exhibited by Uranus and Neptune, which Dr. Thomas C. Van Flandern, an astronomer at the observatory, says could be explained by "a single undiscovered planet." The best candidate, Dr. Robert Harrington, calculate that the 10th planet might be one to five times as heavy as Earth but still within the gravitational influence of the Sun.

Some astronomers have reacted cautiously to 10th-planet predictions. They remember the long, futile quest for the planet Vulcan inside the orbit of Mercury. Vulcan, it turned out, did not exist. They would skip with a large object on the 10th planet, except the exhaustive survey by the 19th century, which was not the case. The 10th planet, if it existed, that according to Dr. Jay F. Hughes of the Ames Research Center in Mountain View, Calif., other astronomers "are not sure of the 10th planet, they think there's nothing left but to search it."

As a scientific meeting last summer, 10th-planet predictions were offered. Alternative explanations for the near-planet perturbations were offered. The something out there, some scientists said, might be an object as big as a black or orange star passing through the Sun's vicinity. Defenders of the 10th planet pointed out suggestions. Material falling into the gravitational field of a black hole, the remains of a very massive star after its complete gravitational collapse, should give off gravitational energy, which would affect the orbits of comets, they said, yet no such changes have been observed.

More credence was given to the hypothesis that a "massive dwarf" star accounts for the mysterious force. This is the informal name astronomers give to celestial bodies that were not massive enough for their nuclear furnaces to ignite, perhaps like the huge planet Jupiter, they are not considered self-luminous stars.

Most stars are paired, so it is not unreasonable to suggest that the 10th planet has a dark companion. However, dark dwarf in the neighborhood might not reflect enough light to be seen. The 10th planet, however, is the 20th Proposition Laboratory in Pasadena, Calif. Its gravitational influence, however, should produce energy detectable by the Infrared Astronomical Satellite.

Whatever the mysterious force, it is a lesson that if the Pioneer spacecraft had voyaged an estimate of the object's mass, that the infrared telescope might find that the discovery would define the scientific boundary of the solar system.

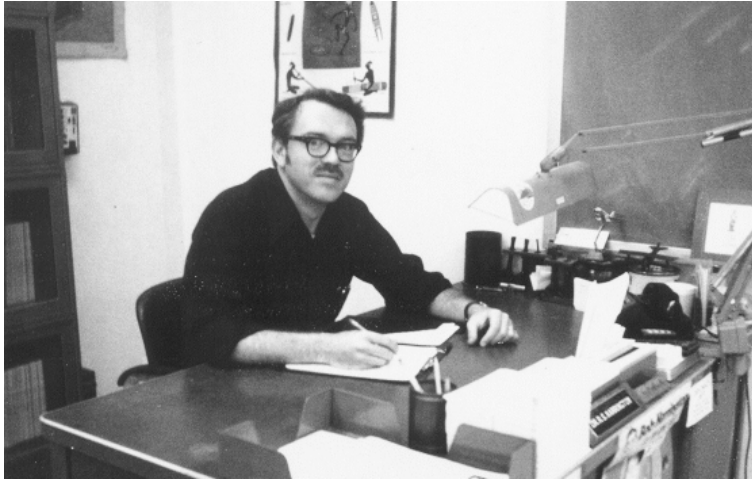

New York Times article on "Planet X" with Dr. Robert S. Harrington

- 1 Victoria Advocate newspaper article, "A Mysterious Planet X - Pioneer 10 Still Searching" June 14, 1988
- 2 Link to paper: <https://tinyurl.com/5n7y9nrz>

“The hypothesis that a brown dwarf star is responsible for the mysterious force has gained credibility.”

—*Dr. Robert S. Harrington*

Unfortunately, the favorable wind suddenly shifted. The old NASA guard of Planet X astronomers died one after the other—partly under strange circumstances. Shortly before his death, *Dr. Harrington* met *Zecharia Sitchin* in person, which was documented in a television broadcast. Therefore, the astronomer probably understood that his findings potentially have a mythological background.

Dr. Robert S. Harrington at his desk

However, he died a few years later from an aggressive cancer. Still, the Planet X debate fell silent in the 1990s. On top of it, NASA announced that all anomalies had been cleared up. From then on, the topic was only discussed by people like *David Morrison*, who the remaining researchers dubbed a professional

debunker—NASA’s equivalent of *Harald L.*, a well-known German gatekeeper.¹

The narrative had turned 180° on the part of NASA. According to the statements of various whistleblowers, however, the observation of Planet X was continued covertly via the South Pole Observatory in Antarctica. Two leaks emerged from this location, with the last one in 2009 allegedly showing Nibiru with its moons. As an astrological layman, one may speculate about the authenticity of these images just as one may guess about the many other records of private research groups that have since claimed to have photographed Nibiru. Moreover, social media sites are regularly flooded with the strangest videos, suggesting that Planet X enthusiasts are the most naïve faction among “conspiracy nuts.” One might conclude that this is intentional. Also repeatedly, photos are circulating showing Nibiru beside the sun, even on the official Soho² images.

Behind this confusion, I suspect a professional disinformation campaign, although some hobby researchers can still enthral themselves with such questionable pictures. After almost 100 years of research, the topic of Nibiru is challenging to grasp and surprises again and again with new developments. In the last decades, NASA and mainstream science changed the narrative a bit. Meanwhile, the phenomenon has been put into a new box called “Planet 9.” Now the American space agency suddenly reasons again, after having denied it for years, that there are still gravitational anomalies in the solar system that could not be explained so far.

¹ Used to describe people who “guard” the narrative in public debates and wipe “heretical” thoughts off the table.

² The Solar and Heliospheric Observatory (SOHO) is a space observatory of ESA and NASA.

The officials admit that at least one unknown celestial body must be behind it, but NASA has moved far away from their own origins of the Planet X research. De facto, they do not even mention that since 1940, scientific theories have circulated concerning this issue. At least in most of today's mainstream articles, they pretend we are dealing with a completely new phenomenon.

Also, the possible connection with the occurrence of a cyclic pole shifts is not even rudimentarily discussed. Today's narrative is limited to the idea that groups of competent scientists vehemently search for Planet 9 but have not yet succeeded. The significance is suggested to be negligible anyway. For those who would like to swallow a typical sedative of the mainstream narrative, I recommend the official ARTE documentary on the subject.¹ From the perspective of the Phoenix Hypothesis, it is implausible that the military, which controls the telescopes, feeds the searching scientists with actual data. Thus, independent investigation, which depends on governmental hardware, is doomed to fail. Whatever they are bound to find is supposed to be discovered or not.

In this regard, several peculiar incidents have occurred from 2020 onwards concerning civil or semi-civil telescopes. The most tragic one is the destruction of the world-famous Arecibo Observatory in Costa Rica. Is this all just coincidence, or is there something to hide? I am still determining a conclusive opinion on this. It is irrelevant whether the trigger for a pole shift is to be found outside the planet or within the less tangible cosmic radiation in correlation with occurrences inside Earth's core. It is possibly a combination of both factors that correspond with each other. It is crucial to recognize that this transformative cycle exists and that it is not far away. You will find links regarding Nibiru on my web-

¹ "Planet 9 – Search in Space" ARTE documentary, 2022

site if you resonate with this topic. Still, I would like to name the most essential sources.

Before you start reading the books of *Zecharia Sitchin* or even try to decode *Nancy Lieder's* channelings, I recommend you to first watch the “Planet-X 101 documentary” of *Marshall Masters* or one of the last lectures of *John Moore*. *Bob Fletcher* was also able to get hold of some explosive information from military insiders. He first became suspicious when he discovered that massive amounts of money were being siphoned off from government accounts and the Federal Reserve Bank. Thus, he concluded that these funds were secretly used to build and equip underground facilities. Furthermore, in the subject area, I recommend the channel “Science of the Pole Shift,” whose lecture is filtered out of the search results on YouTube but can still be seen in its entirety. Just find the channel. The same applies for the other documentaries mentioned. An extremely factual discussion of the subject can be found in the publications of author *Andy Lloyd*.¹ Also intellectually enriching is the book “Nemesis – The Death Star” by *Dr. Richard Muller*. Just don't try to research it on the Internet—at least not with the usual search engines.

Google is oddly biased when it comes to Nibiru. If you take this topic seriously as a content creator, you are not entirely censored, but the corporation hides the “interesting” articles in the search results. While YouTube, for example, rigorously deletes videos that are too offensively contradicting the official position of the WHO or the 9/11 Commission, this is not the case with Nibiru. Therefore, the search function places the content in the back rows. But if you know the exact address, you can access the content on the video platform. The same principle applies to SERPs² in

¹ *Andy Lloyd* “Dark Star - The Planet X Evidence” Time Voyageur Press (2005).

² The “Search Engine Result Page” (SERP) is the term used to describe the display of search results in search engines such as Google.

Google search. If the AI-supported algorithm determines that the topic of Nibiru is taken too seriously in a specific article, the website is penalized and dropped to the back rank. Planet X is definitely blacklisted as a non-scientific lunatic topic which makes research challenging.

It is even more difficult to find complete transcripts from the various whistleblowers on the net who have gone public about Planet X in recent decades. Much of it has since been deleted and censored. Retrieving them is also challenging because almost all of them, except *Bob Dean*,¹ remained anonymous. Therefore, there is often no name to research for. In some cases, these insiders were vetted and published by well-known journalists. Here one can trace the publicists. For example, the author *Cristoforo Barbato*² published the statements of an anonymous Jesuit who is said to have worked in the Vatican secret service. This whistleblower spoke about the findings available to the Catholic Church on Nibiru that were classified under the “Omega” level of secrecy. The transcripts can still be found on a historical-looking website. The only question is, for how much longer?

The whole whistleblower universe surrounding Nibiru is fascinating but also highly speculative. I get the impression that many of these people are actually from government circles—just by the terminology they use and how they tell their stories. You can get the feeling that they believe what they are reporting. But even if they were authentic, their superiors could still have used them to spread false intel. It doesn’t surprise me when isolated

¹ *Robert Orel Dean* (March 2, 1929 - October 11, 2018), was an American ufologist from Tucson, Arizona. *Dean* retired from the U.S. Army after a 28-year career as a command sergeant major. *Dean* said he considered himself a professional UFO researcher and held a “Cosmic Top Secret” license during his military service.

² *Barbato, Cristoforo* (2006). “The Omega Secret” (German translation available in *Nexus Magazine* 10th issue, 2007).

details or estimated arrival dates vary among whistleblowers—or are even overdue. As I mentioned earlier, such erroneous data is often deliberately corrupted in the lower hierarchies of intelligence agencies. Therefore it is possible from the top to determine precisely, based on these divergences, which department the mole comes from. It also contributes to confusion and undermines credibility when something is leaked.

In some cases, even science might just have had vague estimates back in the day that were corrected later on. Of course, the whole Nibiru story could have also been woven into the pole-shift narrative deliberately by intelligence agencies to corrode cataclysm research—just as *Ben Davidson* suspects. According to this assumption, half-hearted censorship would only be a scheme to provide more plausibility to the tainted intel. To put it in an approximation of *Agent Mulder's*¹ words:

“The truth is out there—somewhere.”

I want to sensitize you to take whistleblowers with a grain of salt. Still, we should not dismiss them as kooks as a matter of principle just because isolated statements seem incredibly abstract or contradictory. Such sources should serve as a rough guide in the larger context, and in the end, we must learn to listen to our intuition. Besides, we should be prepared for everything anyway. We could be completely indifferent about what triggers the pole shift. Therefore, I would like to mention a whistleblower who neither revealed information about Nibiru nor clearly named the pole shift as an outcome but nevertheless left a lasting impression on my research.

¹ *Agent Mulder* is a fictional character from the series “The X-Files”

5.6 The Anglo-Saxon Mission

One of the last videos *Bill Ryan* of Project Camelot¹ published before he was pressured to give up his ambitions in the alternative media is the so-called “Anglo-Saxon mission.” *Bill Ryan* interviewed a high-level whistleblower in 2010 who talked about a scenario that not only confirmed the core of the Phoenix Hypothesis but predicted essential details that we could observe later on the collective stage. According to his report, already in 2005, the System planned pandemic lockdowns and geostrategic conflicts to prepare humanity for a cosmic event. Anonymous whistleblowers are usually sources one would prefer to avoid for the sake of argument. As I noted in the previous chapter, they should be taken with a grain of salt. Nevertheless, this interview has considerable significance. To that end, however, I must tell you about my personal experience. But first, let’s start with Project Camelot.

For those not particularly interested in secret societies and clandestine operations before 2010, Project Camelot (PC) may not be a household name. However, in this context, it is essential to note that *Bill Ryan* and *Kerry Cassidy*, the main initiators of PC, were the most famous forerunners in bringing whistleblowers from elite circles and dark government agencies to the public. This group of insiders included former military personnel who had something to say about Nibiru. *Robert “Bob” Dean* is the most credible source I mentioned in the corresponding chapter. Independent from this fringe topic, PC publications were omnipresent in the global truthers scene at that time because they exposed a

¹ Internet portal for the publication of insider information and whistleblower statements

wide range of machinations of the System. Some of the interviews were translated into various languages—even Mandarin.

Not every one of their whistleblowers convinced me as being entirely genuine. So there was often speculation about whether the System deliberately kept *Ryan* and *Cassidy* busy with covert “agents” and their half-truths. But with the said insider who spilled the beans about the “Anglo-Saxon mission,” I retrospectively assume an authentic source. This conclusion derives from the following facts: I was personally present the last time *Bill Ryan* visited the German Nexus Magazine¹ editorial office in Bavaria in 2010. His goal was to record an interview with *Jim Humble*,² temporarily residing in Akams at this time. After accomplishing the primary objective, I had time to talk with *Bill* about other subjects.

Project Camelot just published the interview with this “Anglo-Saxon” insider a few weeks ago. In this context, *Bill* told me immediately that he had poked too deep into a wasps’ nest because the System suddenly put him under massive pressure. I want to keep discretion about the essential key points mentioned to me in confidence. However, the impacts came simultaneously on various fronts, and the message behind them was evident. Consequently, *Bill* left a few weeks later for South America, where he is said to live today still. He has never published something of significance again since.

A few key talking points stuck in my mind from our last meeting. For example, *Bill* assured me that the insider was beyond reproach regarding authenticity. Nor did he come from the usual networks where one famous whistleblower brings in the next. *Bill*’s

¹ The Nexus Magazine is an international journal focusing on frontier science topics and was directed in Germany by *Thomas Kirschner* who lived in Akams in 2010.

² *Dr. Jim Humble*, a former NASA employee and gold prospector who became famous for MMS or chlorine dioxide as an alternative therapy.

contact was a well-known public figure and, because of his military past and position at the time in the City of London, had a foot-long article on Wikipedia—a down-to-Earth gentleman with an authentic conscience.

Bill Ryan at a UFO conference

The insider was not interested in gaining fame—just the contrary. So this time, there was no film or audio recording for the public. Project Camelot only published a transcript¹ of the conversation, but this manuscript was dynamite. According to the whistleblower's testimony, he was confronted in 2005 by the highest circles of his fraternity with a comprehensive plan to put the world in a state of emergency via staged and deliberately induced pandemics. Even back in 2005, it was already decided that

¹ The full transcript can be found here: <https://tinyurl.com/mpyjhydr>

China would be the starting point for the first flu-like infectious disease. Other epidemics would follow.

Moreover, the goal was to ignite a third world war at various neuralgic points. The undisguised agenda behind this effort was primarily a creeping but later radical population decimation, with implementation subject to a critical timetable. The insider was not directly told what the calculus behind this was. Still, circumstantial evidence suggested to him that the “Anglo-Saxon mission” was primarily to prepare for a cosmic event that would lead to global upheaval every 11,000 to 12,000 years. The objective was to gain the best starting position for a new dawn of mankind. That, roughly compressed, was the consensus between *Bill* and his interviewee.

I did have initial doubts. How the insider was initiated into the plan in 2005 by a “coincidence” or a “mistake of the conspirators” before he decided to spill the beans in 2010 is bizarre. Moreover, he was himself a Freemason of higher rank. That fact alone rendered him suspect. Perhaps the System wanted the story to be leaked? Hence, it could have been a deliberate misdirection—possibly a PsyOp. I becalmed myself with this interpretation for years until 2020, when the first phase of the presented plan became a reality with the global pandemic of 2020. In the meantime, Western propaganda in the sense of a belligerent escalation of the Ukraine conflict is hard to ignore. This development aligned with the whistleblower’s description of the secret agenda, although the System could have altered some details over time.

In the context of Project Camelot, I found further PC interviewees who supported partial aspects of the Phoenix Hypothesis, but the “Anglo-Saxon mission” provided the most significant piece of the puzzle. *Bill Ryan’s* video message¹ and summary of the 2010

¹ full transcript and video link: <https://tinyurl.com/4e2tsmbp>

interview were often quoted during the pandemic on internet forums such as GLP.¹ So I recommend starting with this video and continuing with the *Robert Dean* interview. You may also recognize the parallels to today’s collective trajectory. The interview with *Bob Dean* is constantly bouncing between different topics but is highly tempestuous concerning Nibiru. Since this recording was made shortly before *Dean’s* demise, it widely seems to be a deathbed confession.

5.7 The Phoenix in Precognition

I have already incorporated essential aspects in different places of this book concerning the precognition of cataclysmic cycles. Nevertheless, I still want to summarize in detail why the European prophecy is so significant regarding my hypothesis. In the German-speaking world, it is hardly known that cataclysmic Earth crust displacements have occurred in the past—only a tiny minority is aware of the possibility. Among those, few would suspect that such a scenario could strike again shortly.

Nevertheless, many truthers fascinated by European prophecy have at least heard about it—mostly unaware of it—because the well-known seers describe the symptoms of a physical pole shift. They just don’t label it as such because they were no geologists. In addition, based on detailed predictions, the process is initiated by a cosmic event—various signs in “heavens” and phenomena in the sky are reported to coincide with the Earth’s changes. Some of the

¹ GLP stands for Godlike productions and is an internet forum that describes itself as a place that does not condemn insanity and allows open discourse to protect itself from censorship. It is the discussion space for conspiracy theorists of all subcategories and a playground for news services and blowhards. Moreover, rumors persist that the Tavistock Institute uses it to monitor and control alternative narratives.

descriptions allow the interpretation of a planetary object. Could these cosmic effects attribute to Nibiru?

Because the prophecies are so famous in Germany, I began my thesis about the physical pole shift from this perspective. But the aspects of the predictions that characterize a crustal displacement are still mostly overlooked or ignored. This oblivion could be explained by the fact that the escalations leading up to the geo-physical event are much more tangible than the grand final. The fear of war is deeply embedded in our collective psyche—possibly at an epigenetic level. This condition should not surprise us since war-based imprints are significantly more common than trauma based on a pole shift experience. But let me summarize the prophecy once again.

Many international prophets or clairvoyants have spoken directly or indirectly of a pole shift to culminate with the famous “three days of darkness.” The correlation can be found in the legacy of the Hopi and the predictions of *Edgar Cayce*,¹ the “sleeping prophet.”

Even *Nostradamus* is credited with such predictions, although this is too speculative. The rhymes in old French are flowery and metaphorical and are coded on top of it, which makes it hard to objectify factual statements of a pole shift from his foretellings. Still, some experts who had analyzed *Nostradamus*’ material are convinced he is aligned with the rest of the European seers. Regardless, the cataclysmic Earth crust movement is practically omnipresent in international prophecy in one way or the other.

¹ *Edgar Cayce* (* March 18, 1877, in Hopkinsville, Kentucky, USA; † January 3, 1945, in Virginia Beach, Virginia, USA) was a U.S. medium. *Cayce* answered questions on subjects such as health, astrology, reincarnation, and Atlantis while in a trance. He became known as the “Sleeping Prophet” toward the end of his life. See appendix for more

The source pool is gigantic, and the similar plot is hard to ignore. Without a doubt, the prophecies of *Alois Irlmaier*¹ are the best-known visions in the German-speaking world. As an authority in this area, I would like to refer to *Stephan Berndt*.² In the European context, nobody has studied the source material so meticulously and written about it as ample as he has. In the meantime, *Berndt* uses special computer programs to maintain an overview. The software allows him to cross-check even the most incidental details to see how often they were recorded and documented by the seers.

Alois Irlmaier detecting underground watercourses

Meanwhile, especially in the European tradition, we have thou-

¹ *Alois Irlmaier* (* June 8, 1894, in Scharam near Siegsdorf in Upper Bavaria; † July 26, 1959, in Freilassing) was a well-digger by trade and became known as a dowser and clairvoyant. He was proven to have predicted the locations of bombings and the whereabouts of missing persons during World War II. *Irlmaier* is also said to have helped solve crimes. He gained notoriety beyond Bavaria for his prophecies of a third world war. See appendix for more

² *Stephan Berndt*, a German author who has written for over 20 years on European prophecy and is considered an expert in this genre.

sands of testimonies of over 200 documented people with precognitive abilities who claim to have seen a modern world war (with drones, tanks, and missiles) on European soil. This storyline reflects in details that concern only the fate of a specific city or region or are also recognized in a more global context. Everywhere in the accounts of divination, we are faced with a strikingly similar basic plot: shortly after the start of World War III, military conflicts conclude due to natural disasters unfolding almost simultaneously worldwide, culminating in three days of darkness.

The typical symptoms of a physical pole shift, like Earthquakes, tidal waves, and volcanic eruptions, are mentioned repeatedly within the source material. Furthermore, cosmic effects like meteor showers, objects in the sky, and cosmic dust are described. We are confronted again with the ancient concept of a Phoenix in the sky and Nibiru as a cyclic trigger for the geophysical transformation. Without naming it directly, an Earth mantle shift is predicted here in all details. The assumption is supported by the fact that a radically changed climatic zones are reported in detail. Thus numerous seers recognize in their visions of the aftermath that southern fruits like lemons and oranges are grown in Germany. In other cases, a Mediterranean climate is directly mentioned as an outcome of the process.

The clairvoyants, some of whom lived hundreds of years ago, were always presented with a similar sequence of events as an inner vision. You could compare it with a movie trailer. No prophet could give an exact date, and they interpreted many observations. This aspect must be clearly differentiated. Nevertheless, their visions hint at seasons and conditions that must be fulfilled before the scenario can occur. Since most known seers were austere personalities, separating their statements between interpretation and actual inspiration can be challenging.

For example, many clairvoyants understand the interruption of World War III before it could escalate into a full-scale nuclear

exchange as God's intervention. This culturally conditioned interpretation doesn't mean it is fundamentally wrong. Still, my understanding is more along the lines that the timing of the conflict escalation was deliberately designed to be a precursor to the geophysical reset. As I explicitly stated in the main body of my hypothesis, the war merely serves as a final diversionary maneuver to prepare humanity for the cosmic event and to move the selected "livestock" into the bunker. The aggressive actions in the current time, which lead to the escalation between the "super-powers," seem partly so ineffable and artificial that the plot seems to derive from a horrid script. Therefore I assume a purposeful intention and a staging. It appears to be a planned conflict, precisely as it is described in the "Anglo-Saxon mission."

When it comes to precognition in general, there is no doubt in my mind that humans have access to an information realm beyond space and time. According to the 12-dimensional *Heim-Dröscher* model¹ this would be the area of dimensions X_5 to X_8 , which is called "information space." Remote viewers² have repeatedly demonstrated the ability to access this "realm" under military-controlled conditions. Nevertheless, there are noticeable "blur-rings" in the prophecies, as if the "scriptwriter" allows himself leeway at these places to insert optional modifications.

There is much to say to the prophecies concerning the possible future development up to the pole shift. I implemented the essential observations from this context into the earlier chapter regarding the optional control crises, which can be recognized in the current situation. I want to motivate you to decide about the

¹ *Illobrand von Ludwiger "Burkhard Heim, Das Leben eines vergessenen Genies"* Scorpio, Munich 2010, ISBN: 978-3-942166-09-6

² Remote Viewing is a technique to reach places and situations independent of time and space. Therefore, remote viewing is also called "remote perception" or "astral traveling." A remote viewer can perceive things that he cannot grasp with his usual five senses.

material yourself. As for the research and systemic categorization of the thousands of seer traditions, I would like to refer you directly to *Stephan Berndt*. Unfortunately, his books are only available in the German language. Each of his publications sums up the bigger picture. He even has highly detailed books that define safe areas based on the collected visions. Also, *Jan van Helsing's* classic, "Book 3—World War III"¹ is an excellent analysis of European prophecy. I want to advise my international readers to look into their local prophecy sources, for I am confident they will find a similar pattern.

Unfortunately, *van Helsing's* work became outdated when it comes to details. For example, in 1999, the author could not explain how a prophesied counterattack on Russian advancing lines would be carried out with thousands of "unmanned" aircraft from the Middle East. *Van Helsing* believed in a misunderstanding. The drone technology described did not become popular until later. Further, the associated bases on the Arabian Peninsula were likewise not built until the "war on terror" led to the construction of numerous facilities. Therefore, it is already worthwhile to resort to more modern analyses. In return, *van Helsing's* work offers a spiritual underpinning of how prophecy can be viewed from an esoteric perspective.

If this is not enough for you, you can find dedicated books on the great visionaries. As an introduction to the topic, I would like to recommend the documentary by *Niki Vogt* on YouTube warmly: *Alois Irlmaier — "Ich seh's ganz deutlich."*² This film is embedded on my website in the source collection. With this cinematic summary, one saves the "consumption" of whole books to the topic, should you be interested only in a rough overview. However, if you

¹ Original title: "Buch 3 - Der dritte Weltkrieg" by Jan van Helsing; Amadeus Publishing House, ISBN: 978-3-9805733-5-1

² Link: https://youtu.be/Cz-o_OzAmJO

want to go into detail, there are concrete and detailed elaborations in the latest books of *Berndt* or you find yourself the original sources to which he refers, which are partially available in various languages.

You will notice significant differences once you look at the predictions of the seers in contrast to the scenarios predicted by some pole-shift researchers. In the prophecies, the cataclysmic effects are recognizable. Still, they do not strike with the same intensity as they are described, for example, in the book by *Chan Thomas*. This scenario is still similar to the understanding of many modern researchers like *Davidson* and *Vogt*. In addition, many details in the revelations point to a celestial body that hurls smaller objects and dust into our atmosphere. Therefore, the Nibiru theory gets more credibility from the descriptions in the European prophecies. Even the often-mentioned three-day of darkness can be explained more comprehensively with a cosmic object involved in the process. Even the famous palm leaves¹ predict an “intruder” planet as the primary trigger for global transformation, according to the translations of *Thomas Ritter*.²

The great debate among analysts is based less on whether the seers saw a coherent vision of the fate of humanity but revolves more around the question of whether the sequences have not already been modified. Has the future been fundamentally diverted to manifest in an alternative timeline? Regarding this consideration, theories and myths surrounding the particle

¹ Palm-leaf manuscripts are manuscripts made out of dried palm leaves. Palm leaves were used as writing materials in the Indian subcontinent and in Southeast Asia reportedly dating back to the 5th century BCE.

² *Thomas Ritter* “Prophecies of Europe/libraries from palm leaves,” from the German original “Die Palmblattbibliotheken und ihre Prophezeiungen zur Zukunft Europas” by publisher *Jochen Kopp*, Rottenburg, in 2006

accelerator at CERN¹ play a crucial role. Hence, some analysts claim that the activities there have led to radical interventions in parallel dimensions. Whether or not this is true cannot be conclusively determined and only time will tell if we are still on the prophesied path.

¹ CERN, the European Organization for Nuclear Research, is a central research facility located near Geneva, partly in France and partly in Switzerland.

CHAPTER 6 | THE QUINTESSENCE

6.1 Conclusion and Summary

Based on the presented fragmentations and confusions within the alternative views, the hypothesis about a cosmically induced transformation brings some order into the prevailing narratives. I assume that I have succeeded in having sufficiently argued that the weight of circumstantial evidence indicates that we could be subject to a global challenge in the near future. Accordingly, this geophysical transformation would place all other global issues in the back seat. Those who neglect this fact will not only potentially misclassify the current conspicuities on the world stage but also fail to recognize future events as artificially created “steering crises” to adapt humanity to the agenda.

Regarding the ultimate manifestation of the cataclysmic pole shift, it is not a matter of subscribing to a particular interpretation from science or prophecy and understanding it as fact. Instead, we should recognize the recurring patterns as a possible framework. Where the exact intersection lies depends on the data sets we consider plausible. Therefore, I have summarized the most critical publications but simultaneously urge that every truth seeker is asked to do homework here and to discern the material. Similarly, as with the prophecies, one must differentiate what objectifiable data sets and what interpretations resulted from the revelations. The seers were never all-knowing nor free of personal opinions regarding the scenario they were shown.

We can use popular literature about ancient advanced civilizations as a classic example. The well-known authors have not only

sharpened our perception of ancient technological anomalies but often formulated fantastic theories about them. *Erich von Däniken* is a prime example. His thesis of extraterrestrial teachers does not have to be necessarily wrong. Nevertheless, given cyclic resets, cutting-edge technology used in constructions like the Great Pyramid of Giza could also come from previous advanced civilizations that could preserve their knowledge. Thus, we must remember that mankind only needed 200 years to progress from horse and carriage to quantum computers. Therefore, it is a matter of separating the facts from the explanatory models and considering the latter optional. This principle equally applies to the logical interpretations within the Phoenix Hypothesis, which are constantly refined and adapted in my personal evaluation. So pick your facts from my theory and discern if you come to similar conclusions.

One of the most neutral collections of ancient anomalies can be found in *Andrew Tomas'* book "We Are Not the First." The author hardly proposes concepts regarding how these phenomena could be explained, but even he delves into the UFO topic. Still, *Tomas* is less invested in the "ancient aliens" theory compared to *von Däniken* or *Childress*.

Another aspect, which is to be regarded as highly speculative, concerns the time estimations. This uncertainty involves the timing of the next pole shift and the dating of past events. The book "The Evolution Cruncher" by *Vance Ferrell*¹ describes in detail how all standard dating methods are under the suspicion of producing completely falsified estimates. Therefore, we should not be surprised why historical sequences developed based on such methods do not make sense. As for forecasting the subsequent crustal displacement, there are two primary trends among independent observers. While many analysts expect a near-term

¹ Publisher: Evolution Facts, Inc. (January 1, 2001) p. 167 - 208

escalation in the coming years, popular opinion leaders in this field, such as *Jason Breshears*, *Ben Davidson*, and *Douglas Vogt*, forecast the cataclysmic events to occur between 2030 and 2047. Interestingly, they arrive at these temporal assessments based on different viewpoints. This common denominator makes it significant.

My forecast also assumes that we still have a few years ahead. This assessment is primarily based on the statements of the seers of Europe, who have described specific events in the run-up. If the old timeline is still active and valid, we still have a long roller coaster ahead of us before the hammer falls and a new epoch begins. For example, before the prophesied pole shift, there was supposed to be a full-blown conflict in the Middle East that would far dwarf the previous escalations.

Likewise, the seers recognized that Europe would experience a massive economic decline and a society massively plagued by internal tensions. Hence, violent demonstrations are expected to occur in all major cities, which would even make the current Yellow Vest riots seem like a picnic in the park. According to *Irlmaier*, Paris will be burned to the ground by its own youth. This conflict between NATO and Russia could only fully transpire when we passed these waypoints. Based on the prophecies, China will be fully allied with the Russian Federation by then and join the war against the United States. Apart from the fact that we can see evident tendencies for such an escalation, which cannot be denied at the latest with *Putin's* invasion of Ukraine, it still takes far more animosity to justify a world war.

Based on the prophecies and the conspiratorial plan of the “Anglo-Saxon Mission,” we must expect an ongoing creeping erosion of the relations between East and West. I can only warn against taking sides because I am convinced that the development will be arranged by all involved parties or their globalist supranational structures. There are no heroes or villains—just actors. Very

few politicians or generals will be privy to the larger plan and simply play their part. The prophesied massive revolutionary uprising among the people, which can already be glimpsed in pale inclinations, will also be part of the plan. Here, too, I warn against being polarized and thus instrumentalized.

Unfortunately, I don't have a crystal ball to look into the future either. That may be a good thing. Hence, I can only compare certain tendencies with forecasts and prophecies to derive my assessments. I still might be missing crucial information. Also, there is always the possibility that the data sets I am referring to are corrupted. False concepts could have been manipulatively inserted into the alternative narrative by the overarching System. While I believe that the majority of the truther scene has been diverted by planted "misinformation," I, too, could have fallen for that. Therefore, every reader should conduct research and form an independent opinion. The Phoenix Hypothesis is only a general guideline for a first overview of the many complex topics. Therefore, I ask that none of my interpretations be taken at face value.

I can only advise you not to become a missionary regarding the concepts shown to you in the book. Even if you fully resonate with the information and recognize a high degree of truthfulness, you should handle it responsibly. Not every person is ready to be confronted with such delicate aspects of reality. You recognize this psychological phenomenon when, for example, the husband does not want to admit to himself that his wife is cheating on him, although he has found the socks of the postman in their bed several times before.

This "protective ignorance" becomes hugely apparent in the context of the Corona crisis. Here one can often observe how vaccinated people tend to develop certain diseases. Still, they blame this condition on Corona, telling themselves they would be much worse if they had not accepted gene therapy. They don't even consider that the vaccination might have a negative "after-effect."

This dishonesty to themselves derives primarily from the sense of self-protection because an admission may imply psychosomatic reactions that may even aggravate the health situation—we call it the nocebo effect.¹ This blissful ignorance of being betrayed is omnipresent in our society. Hence, *Mark Twain* is reported to have once said:

“It is easier to deceive people than to convince them that they have been deceived.”

Regardless of who formulated these words of wisdom, not paying attention to the law of “free will” only leads to far-reaching consequences. This metaphysical principle states that everyone is free to act as he pleases. Of course, this does not exempt him from the law of causality.² Even though personal responsibility is one of the crucial aspects of this reality, it still implies the right and liberty to ignorance. Who disrupts that “peace of cluelessness” without being asked or authorized infringes on this law and causes negative consequences for himself. Even if this is difficult to accept, a violation often leads to unwanted effects for both parties. The only platitude that comes to mind is:

“The road to hell is paved with good intentions.”

Therefore, you should only talk about such topics with people asking questions and are sincerely open to an inconvenient answer. This dedication to the truth is not always easy to recognize—even within the truther scene, I have met people who

¹ The nocebo effect is the negative counterpart to the placebo effect. It describes the undesirable side effects of sham treatment, i.e., when it does not heal but worsens or causes discomfort due to a negative mental attitude toward the therapy.

² Hermetic law of “cause and effect,” which is also valid in Newtonian physics and states that every action produces a corresponding reaction or consequence.

admitted, at some point, that they do not want to know these causalities so precisely as I explained them in this book. These are often the same people who get upset about the mainstream believers, call them “sheeple,” and always ponder why their peers still want to trust the government and their favorite television network. In psychology, one talks about projection in such cases.¹

In summary, mental confrontation with the hypothesis could be overwhelming. This must be taken into account and respected. Therefore, I advise restraint and reluctance. Thus, our intention should not be to create mass awareness, as this would also result in uncontrollable consequences. All hell would break loose if the content of this book would reach collective consciousness over night.

Nevertheless, every individual who strives for more profound knowledge and an understanding of what is happening on the global stage deserves an answer. This conviction is a universal principle that even the System has to uphold. How to deal with the challenges is a whole different story. Hence, I want to give a general guideline in the following subchapters.

6.2 Psychological Handling of the Thesis

The Phoenix hypothesis is a double-edged sword in the psychological sense. It can turn uncertainty into clarity but also create a

¹ In psychoanalysis, projection generally - and independent of schools - refers to a defense mechanism. The term projection includes the transfer and displacement of inner-psychic contents or an inner-psychic conflict by the depiction of one's own emotions, affects, desires, impulses, and characteristics, which can be in contradiction to one's own and social norms, onto other persons, groups of people, living beings or objects of the outside world. The “defense” consists in the fact that by projection, one avoids dealing with contents in oneself, which one sees in the other.

new existential challenge. First, the thesis offers a potential answer to why the world has become so chaotic and why the System unleashes wars without restraint, artificial pandemics, and terrorizes people with controversial gene therapies. It explains most of the anomalies people wondered about since they noticed an uptick of peculiarities in the collective reality.

I could have given more examples, but everyone had their own moment of truth when they realized that an agenda was pushed down the people's throats that had been planned for a long time. The mere lack of understanding of the plan and of its inner logic it derives from is a form of mental torture—one can never anticipate what comes next. Of course, there are numerous different theories about the current situation. Therefore, many wary observers alternate between despair and hope, while both extremes are only two sides of the same coin.

The Phoenix Hypothesis can help dissolve the terror of the unknown threat by showing that global events indeed follow an inner logic. Furthermore, my portrayed perspective even gives the acting System some inherent reasoning. Unfortunately, with the acceptance of the thesis, one also abandons the hope that the haunting could be finished soon because, for example, the people and their leaders regain sanity.

As an analogy, we could use the following scenario: We are like spelunkers who, in the faint glow of our lantern, can make out delicate outlines of a monster in the darkness. We may even be able to smell it, and it makes menacing noises. However, without accurately recognizing the monster and understanding its nature, we must constantly be on guard for anything—fight and flight impulses are alternating. Ergo, our mind is continuously busy considering contingencies and expecting the worst at any given moment. This situation means continuous stress, which is known to be unhealthy. Therefore, some of us want to cling to an optimistic scenario promising the threat could be over instantly. At

least, that’s how I observe it in most truthers, and I was susceptible myself until I flushed my “Hopium” stash down the toilet.

In the 4th part of the Matrix films,¹ which contains more philosophical depth than is generally recognized, the Analyst says to Neo in the “bullet-time scene”:

“Did you know that hope and despair are almost identical in code?”

— *The Analyst*

As a representative of the System, the Analyst implies that the two polar emotions are merely different sides of the same principle. These extremes hold us in passivity. In the media context (alternative and mainstream), hope and despair are almost always stimulated. The Phoenix Hypothesis wants to show another way—a middle ground.

My fundamental message as the author of the thesis is that we have an enormous trial ahead of us, individually but also collectively. This challenge should not be ignored and must be addressed openly. Nevertheless, every person confronted with this challenge has a real chance of overcoming it. This conviction is not a naïve belief or a hopeful attitude but derives from my research.

What mastering the challenge means can be formulated differently—each individual might have a different goal. Primarily, the majority will be concerned with physical survival, which is entirely feasible if one prepares mentally, physically, and spiritually for the test. The next great cyclical transformation of the earth is not the end of the world or humanity. It is a necessary reset that has its

¹ Matrix Resurrections is a 2021 U.S. science fiction action film from director Lana Wachowski that is a sequel to 2003’s Matrix Revolutions.

place in the cosmic game or the grand scheme of creation. We should accept the possible scenarios underlying the hypothesis as a challenge. Only in this way do we rise from our passivity or move beyond the exhausting fight with windmills.

But how can we deal with this challenge concretely, and what should we pay attention to? Even though I am still in the process of formulating a viable path from my situation, I would like to share a few fundamental considerations that I take into account in this regard. In doing so, I distinguish between physical and spiritual initiatives. Only a balanced mix of both principles can work sustainably. Nevertheless, there may be exceptions, and the distribution can differ individually. Let's start with the physical measures.

Even if we are unsure about the trigger for an Earth mantle shift and the possible consequences, the flooding of coastal regions is still a plausible scenario. There are different evaluations based on scientific models and prophecies about how far away from the coast one should be. For this, everyone must do their homework and trust their intuition. There are apparent discrepancies in the interpretation because the seers draw a less severe scenario than, for example, the popular analysts like Douglas Vogt and Ben Davidson—not to mention Chan Thomas. Still, avoid living close to coastlines and move away from active volcanos. This conclusion should be a no-brainer by now.

Furthermore, large cities or places with a high population density are generally more risky in unprecedented situations than rural areas. People are unpredictable when they panic. So please stay away from unprepared assemblies because they will become desperate first. Natural water sources and rivers are helpful in many such scenarios, as long as you have a filtration system. The

minimum you can purchase in this regard would be a Lifestraw.¹ (No, I do not have an advertising contract)

As a general guide for positioning, I can warmly recommend the book by Stephan Berndt, entitled “Refugium”²—maybe translation software can help with the situation. I would not rely on the prophecies alone, but the model in the book provides a rough orientation and sharpens the perception of the relevant issues, but this information is only useful for Europeans.

Physical preparation should not be isolated only to cover the final event described above. Instead, plans should consider that artificial crises, such as blackouts,³ could also be initiated well in advance. Accordingly, supplies and self-sufficient cooking equipment are reasonable purchases. Of course, proper “prepping” encompasses numerous sub-areas, such as medicine, water purification, weapons, bugout bags, navigation, power replacement, and much more. It is not my intention to write a guidebook on prepping here. Maybe that will come later when I feel “competent” enough, but for now, it is mainly to give a rough overview. To get down to the nitty-gritty, plenty of helpful blogs and YouTube channels have thought through the topic in more detail than I’ve done. Also, solutions exist for small budgets, so no one has an excuse.

Mainly, I would like to note the fact that many people in the truther scene still spend vast amounts of time watching the 1,827th talk show debating how unhealthy the “gene therapy” is and watching the Xth monologue of an analyst who is shocked and indignant that the government puppets all seem to be incompe-

¹ Simple straw with integrated water filter for crisis areas

³ Extensive, long-term power outage.

tent clowns. We already know that! We can invest this time in researching practical issues—like proper preparation. You can learn many skills to serve you during a temporary infrastructure collapse. How do I start a fire? How do I grow vegetables quickly and effectively? The list is inexhaustible and should be tailored to the individual situation. There are free guides and tutorials on all these topics.

There could be people who, despite granting the Phoenix Hypothesis a certain credibility, do not want to give up their lavishly paid job in downtown L.A. just like that. They may rely on their well-prepared parents who live 200 miles away in the countryside. The father was an elite fighter with the Navy Seals, and the mother still learned from her grandma how to preserve food in jars. Fair enough! That would be the bunch to which I would go, too.

Nevertheless, you should still have a plan and the necessary crafts to make your way toward the experts using a map and compass. This example should convey the fundamental principle. The most general thing that could be said about this topic is that everybody should develop a basic plan. However, whether it works out, in the end, is probably in the hands of a higher power anyway. I keep it according to the Sufi motto:

“Trust in God, but tie up your camel!”

—Sufi proverb

This proverb, translated into my wording, suggests that I do what I can implement and still trust in the Universe. Specifically, this means in my case: I have a few supplies that keep me and loved ones 2-3 months from starvation, I have water filters, and various survival gear—worth about \$3,000. Among those items is an impressive knife, which can be used in an emergency for mul-

tiple purposes. Yet, I have only perfected the ability to hurt myself with it involuntarily. Ergo: There is plenty of learning potential.

I may be considered a moderately motivated greenhorn in the hierarchy of preppers. Still, this is a start that can be expanded. I simply do what I can afford now—otherwise, I keep fit and eat healthy. To that end, I’m basically laying some groundwork to make me feel like I’m not entirely naked when that fragile cohesion that binds our society/infrastructure together dissolves. Nevertheless, I resolve to develop on this level. Anyone can adopt this attitude and adapt it to their situation. If the Phoenix Hypothesis does not motivate you to make the best of yourself and your life, then no personality trainer will help.

6.3 The Spiritual View

The entire spiritual understanding I represent needs a separate book to argue it comprehensibly. I plan to write the extended Phoenix Hypothesis as a second book for this—yet, I am not ready. It was also important to me not to mix secular with spiritual axioms, as it would probably overwhelm most readers and overload the book. Besides, it could taint the credibility of factual aspects if one fleshes them out with philosophical and metaphysical thoughts.

Nevertheless, I want to give a small outlook on the second part and outline a spiritual guide, which some readers might expect. However, I cannot offer a detailed derivation, so I will formulate my opinion exclusively since this would need dedicated work to argue my understanding. This limitation means that those without access to such topics can also close the book at this point. Anything further may confuse or irritate you. I have warned you.

The spiritual paradigm commonly assumes that we have an immaterial personality core—one could also speak of a soul.

According to this concept, we could be considered units of consciousness having a temporary human experience but not dependent on the body as a “basis of existence.” From this point of view, the soma is just a container, a vessel, or an avatar to interact in the physical world. The work by Dutch cardiologist and scientist *Pim van Lommel*¹ documents in an impressive way that this immaterial consciousness is evident in near-death experiences. At the same time, reincarnation research² indicates that, after physical demise, we are back on the stage of material existence sooner than most would prefer.

From the perspective of spiritual immortality, there is nothing to fear. Nevertheless, I realize that even people who have had an out-of-body or transpersonal experience³ and who are fully aware of their eternal existence are still attached to their avatars—their physical body. Even in the world of highly immersive computer games, players are strongly associated with their virtual characters and often react emotionally when they pass away. This attachment doesn’t even require a visual representation. In one of his podcasts, *Jason Brashear* reported on his experiences with the board

1 *Willem (Pim) van Lommel* (* March 15, 1943, in Laren/North Holland) is a Dutch cardiologist and scientist. In November 2007, his book “Endless Consciousness” (“Eindeloos Bewustzijn”) was published in the Netherlands and became a bestseller with more than 200,000 copies sold in Europe and the USA. In 2005 he received the *Dr. Bruce Greyson* Research Award from the International Association for Near-Death Studies (IANDS). In 1988 he initiated the foundation of the Dutch branch of the IANDS (Merkawah Foundation). In 2015, he became an honorary member of the Swiss-IANDS

2 Empirical reincarnation research is called, among other things, observations made by Western researchers in the course of field research. As of 2018, more than 3,000 cases of alleged reincarnation have been documented. From the 1960s until shortly after the turn of the millennium, *Ian Stevenson* studied over a thousand cases of children, mainly between the ages of two and seven, recounting past lives, becoming a leading researcher in the field.

3 It is the experience of altered states of consciousness described in transpersonal psychology. It is about grasping psychic states outside the ordinary waking consciousness. This also includes near-death experiences.

game “Dungeons & Dragons”¹ during his time in prison. According to his account, even hardened felons occasionally burst into tears when their developed alter ego² was struck by death.

Nevertheless, it seems easier for people with a prior spiritual understanding to confront existential threats, but indifference is still not expected. Accordingly, those people will also look for a solution to navigate their avatars through the transformative processes as gently as possible. This is where the influence of thought, respectively the power of positive manifestation comes into play. The primary spiritual concept in connection with the transformative cycles focuses on the power of one’s own mind to control reality. I am also aware of this interaction and therefore convinced that we, as “co-creators”³ embedded in this virtual construct (Maya, Matrix, Simulacrum)⁴ are able to modify fundamental conditions and probabilities through our mental orientation—our attitude. However, this is often misunderstood or loosely interpreted.

¹ Dungeons and Dragons, D&D or DnD for short) by *Gary Gygax* and *Dave Arneson* is considered the first pen & paper role-playing game. D&D was first successfully distributed in the United States in 1974 by the company Tactical Studies Rules, which was founded for this purpose.

² In D&D, players can be characters (alter egos) such as dwarves, knights, or elves. These characters develop new artifacts, weapons, and abilities over the course of the game. Thus, a personality evolution also takes place, which is lost with the death of the character.

³ Esotericism established the term for co-creator. Based on the assumption that we carry the divine creator principle within us to create and modify reality.

⁴ It is the ancient paradigm that we live in a holographic universe. It is known from the Vedic scriptures with the concept of “Maya” (reality as a cosmic illusion). Also *Plato* describes a projected reality with his allegory of the cave. In pop culture, this principle is reflected in the notion of a “Matrix” based on *Nick Bostrom’s* “Simulation Hypothesis,” which in turn is supported by quantum physical phenomena such as the EPR paradox and wave-particle duality. Furthermore, the assumption of virtual reality is based on the first hermetic law: “All matter is spirit or consciousness.”

In Germany, the most popular approach to look at topics like the pole shift and the transformative cycles from a spiritual point of view has undoubtedly been founded by *Dieter Broers*. In his numerous publications, he regularly implores his audience not to approach these associated mundane aspects with fear. He points out that the outer physical manifestation is only the mirror of a mental process. This notion corresponds and derives from the Hermetic law of correspondence: “As within, so without.”¹ Therefore, the pole shift is regarded as an evolutionary leap of our consciousness into a spiritual awakening, and the worldly transformation is merely a symptom or a reflection of inner processes.

Broers primarily suggests that our mental orientation can change the collective fate, which is justified, for example, with the well-known effect of the 100th Monkey.² This principle claims that the behavior of a group changes as soon as a critical mass starts to live according to higher-developed principles. In many empirical studies, this critical mass is far below 40% of the core group and is applicable to mankind as a whole. I cannot draw this conclusion, even though I acknowledge a collective consciousness and consider local effects as described in the framework of the *Maharishi*

¹ The law of correspondence is by far the best-known of the spiritual principles of Hermeticism. It is commonly known as the Law of Attraction and the Law of Mirrors. It is also called the “Law of Analogy.” The “Law of Resonance” is another name for this cosmic law. It relates to all three planes of existence. The law of correspondence states, “As within so without. As above, so below. As the spirit, so the body. As in heaven, so on earth.” Accordingly, the body is a reflection of the soul. Everything we see in the world, everything good and bad we experience, is within us. For as within, so without.

² The principle of the “Hundredth Monkey” (The Hundredth Monkey Phenomenon or The Hundredth Monkey Effect) is a controversially discussed example of collective consciousness. It is based on experiments with primates, according to which learning experiences are established in other groups above a critical mass of animals, even over spatial limitations.

effect¹ to be valid. *Broers'* message, broken down into the essential key points, states: we ought to shift from fear to joy, give little or no attention to the physical implications, and focus primarily on the spiritual process. This mental realignment is supposed to change the trajectory of collective destiny and initiate a smooth transition into a new paradigm. In addition, he postulates that the world will split into two parallel universes as an outcome of a pole shift. He calls the alternating timelines Earth 1.0 and 2.0—like different versions of an operating software of the matrix.

Of course, the *Broersian* model is much more complex than I can summarize, but I have explained the essential axioms that dominate his approach when dealing with the pole shift. I agree with this understanding on a fundamental level, and this is not only because *Dieter Broers* was my teacher for many years and a friend, too. In the context of joint projects, I was allowed to dive deeply into his brilliant mind and investigate his reasonings and arguments. Of course, this also radically revolutionized my perspective on reality. Nevertheless, I have to relativize specific details of his view, which does not even include the thesis about “Earth 2.0.” This differentiation concerns the interpretation that a critical mass could alter the collective fate or change the script considerably.

This separation of my understanding is based on the fundamental nature of the matrix as I recognize it. For example, I refer to the little-known hermetic law of “Free Will.” In the prevalent imagination, we live in a homogeneous construct that virtually bows to majority opinion or the aforementioned critical mass of co-creators. This perspective is incomplete and does not coincide with my practical experience. Instead, it seems to be the case that

¹ ADS Paper: *Kurt W. Kleinschitz* “An investigation into field effects of consciousness from the perspectives of *Maharishi's* Vedic Science and physics” Link: <https://tinyurl.com/49dsfy76>

collective reality (everything we see on the worldly stage: Wars, politics, terror, pandemics) is almost 100% directed and controlled by artificial intelligence¹ within the matrix.

In addition, the assumption that the actual number of co-creators present inside the matrix cannot reach a critical mass—would never get the numbers. The illusion of 8 billion embodied souls is created by NPCs.² These organic portals simulate a population but act like bots according to clearly defined algorithms without developing a free will or ever starting to behave outside their genetic/epigenetic programming.

The valid number of co-creators could be a few hundred million—perhaps less.³ Of these incarnates, a proportion still largely mimics the NPCs because conformism is convenient, and they still need to individuate sufficiently. One may argue that even highly individualized people continue their programming that make up their personality and are, therefore, never completely free. One could also call these algorithms “ego,” but perhaps this

-
- ¹ In the context of *Jason Breshears*, the term „AI-X“ has become generally accepted, which means artificial intelligence with unknown co-factors. Primarily behind this intelligence, the creator god *YHVH* respectively, *Jehovah*, is assumed. Still, other higher dimensional entities, like *Ariman*, *Lucifer*, etc., could only represent different manifestations, respectively, subprograms of the same control system of the matrix.
 - ² NPC or non-player character refers to all game characters or participants in a virtual simulation (simulacrum) that are not controlled by “conscious players.” Classically, this refers to most characters that populate the game world. NPCs can play supporting roles but are always limited in their actions by their programming and have no free will in the classical sense. In spiritual concepts, they are called “organic portals.”
 - ³ Ancient Egyptian writings suggest that each stone in the Great Pyramid of Giza (the center of the world) represents an incarnate soul that can incarnate here. In the game world analogy, one would speak of a “player slot” on the server that one can join. The pyramid consists of about 2.3 million stones.

ego-program construct¹ also becomes more of a servant asset than an unconscious ruler with progressing individuation. In other words, the collective reality is almost 100% pre-drawn. It is therefore predestined, even if the presence of the co-creators always seems to provoke “edits,”² paradoxes, and temporal adjustments in the matrix. Nevertheless, the “movie script” and, thus, the prophecies will manifest themselves in one way or another on the physical stage. Ergo: the collective destiny could be inevitable.

However, the co-creator can ultimately dominate his personal reality or intelligent field. It is like a reality bubble surrounding us—a subjectively rendered construct that may contain paradoxes regarding the collective manifestation. This particular field can encompass a living space or even a small city. Suppose several co-creators with coherent mental focus find each other, whole regions³ can defy the collective presentation like an isolated parallel universe. Unfortunately, it takes very high mental ability, discipline, and willpower to avoid being energetically inhibited as a single co-creator in an environment dominated by the System and NPCs.⁴ A classic example of such a toxic habitat would be a large city.

-
- ¹ All spiritual traditions emphasize that the ego or the illusion of a separate „I“ is part of the matrix, and even the character (human characteristics) is part of the virtual avatar. Only the discarding or transcendence of this construct allows the liberation from the matrix.
 - ² Modifications of the construct, which can also be retrocausal (see “Mandela effect”)
 - ³ E.g., the effect on crime statistics by a critical mass of meditators focusing on love, peace, and compassion. See long-term experiments in the context of the Maharishi Effect and their extensive studies. <https://tinyurl.com/49dsfy76>
 - ⁴ From this perspective of the extended simulation hypothesis, the “System” is an artificial intelligence that controls the collective rotation plan from a higher program level of simulation (also called “Maya” or “Simulacrum”). This control program is also called “AI-X” and controls the thanks and actions of the NPC collective via higher dimensional influence (e.g., dreams) and mass media control (e.g., TV and radio).

From this perspective, that individual and collective reality are two distinct worlds in which we live simultaneously does not change the fact that we need to think and act in “high frequency” to create a stable and safe reality field around us. This understanding includes mental hygiene, focusing on constructive and loving mental activities. Here we have the approach that *Dieter Broers* primarily represents and propagates. Only why do I violate this premise with my Phoenix Hypothesis? Obviously, I describe all the details widely associated as “negative” around the possible physical manifestations on the collective level. *Broers* would not do it that way.

I struggled with myself for a long time about whether to share the patterns that I could not continue to ignore with the world. The danger of having a counterproductive effect and ending up “crystallizing” this reality in the first place based on some form of “predictive programming”¹ permeated my internal thought discourse. Even if it may sound like a betrayal and a justification for some followers of *Dieter Broers*, and those that propagate similarly, I will discuss my motives for publishing the Phoenix Hypothesis.

My decision was based on the previously described understanding that collective and individual reality are two virtual planes in which we are simultaneously embedded but exist separately. These two aspects can also have paradoxes, where the respective field is always aligned with the “belief” of the individual, whereby the collective is controlled by an AI that follows a script. Depending on the situation, an intersection is rendered from both perspectives—usually without creating any apparent anomalies.

¹ Predictive programming is a theory that the government or other higher-ups use fictional movies or books as a means of mass mind control to increase widespread acceptance of planned future events.

However, the inner conviction of the individual is always decisive.¹ If the co-creator believes that the world is full of bad people, then in his reality, the Gaussian distribution curve will also bend in the focused direction. Statistically, more conflicts will be staged for him. This principle is not only a question of perception! It is part of the Hermetic metaphysics of the matrix and can be applied in return likewise to positive beliefs. The construct is thus basically neutral and serves the “good” and the “bad” equally. The matrix only reflects what we expect of it and how we treat our environment. Thus it is as neutral as the wall mirror. If we smile, it smiles back. However, this mechanic will be overturned by karmic² or fateful implications,³ which are likewise “played” into our field.

The individually rendered matrix can also do justice to very complex beliefs. If the idea exists that the world is flat, angular, or round, then the matrix implements correspondences and experiences into the individual reality that reflect this conviction. This creates “belief loops,”⁴ which are continually self-confirming. The realization that there is no universally valid form since every representation is already a virtual illusion and nevertheless appears real for the carrier of the belief frees us from the necessity

-
- 1 This mechanism also includes unconscious beliefs, which correspond to a different distribution depending on the individual. As a rule, the unconscious part is always much more extensive than the conscious aspect. That is why the therapeutic reappraisal (also through meditation) of the traumas and imprints is so valuable to invalidate (delete) unconscious programs that create an unfavorable individual reality.
 - 2 “Karma” is the Vedic principle of causality, cause, and effect in metaphysics.
 - 3 Causalities, which are still taken along from “old” simulations or “game rounds,” as the potential to be balanced. These potentials discharge or manifest themselves in individual challenges that contain a learning potential—often also called “strokes of fate.”
 - 4 “Belief loops” are experiences that lead to conviction. These provoke the same experiences, which in turn reinforce the belief, and so on.

to have to argue about a dogma.¹ But this fact is only casual remark.

More important is that I assume that the prophesied manifestations cannot be stopped. Suppose someone who previously believed that his mental orientation could tip the overall balance of society realizes that a “Worst Case Scenario” is unfolding globally. In that case, he might begin to doubt his abilities as a co-creator. He would believe that he is bound to the fate of the world. Thus, his respective field would also collapse because he would lose confidence in himself based on the imaginary idea that he needs to change the collective because he is tied to it. As I said: we are in two realities simultaneously—one we can change and one not. Well, we are not called, without reason, co-creators, with emphasis on “co-.”

My goal is to sensitize the recipients of my message to the worst case, according to the motto:

“Prepare for the worst, but manifest for the best.”

The general approach is to let go of trying to control collective destiny and stop fighting windmills. The course of events is already determined at its core. We can only accept fate and make the best of it individually by also understanding the physical process as a challenge—an endeavor that will only prevail with spiritual evolution. Our intelligent field must be stable, even in the face of apocalyptic tendencies in the collective, which we can hardly ignore if we do not meditate continuously in a cave in the Himalayas. We may continue to hope for Earth 2.0 as a parallel construct, but first, we must focus on the task ahead.

¹ A fixed belief that is not anchored in the fundamental hermetic laws. This conviction can also hide on an unconscious level.

To let go of the ambition controlling the collective matrix does not mean to subdue to the System. We should organize; one can also “take to the streets.” But in the end, networking with like-minded people is the most critical aspect of it. If someone thinks he must fight the System, I won’t talk him out of it.

Everyone has their role in the big game. As an individual learning experience, the aggressive approach will also have its value, but please do not fight with the illusion that you want to change the script or the outcome of the movie plot. Otherwise, this could only lead to “disillusionment.” From the perspective of the singularity of all that is,¹ one basically always fights with oneself. More elegant than engaging in an external conflict, however, is the fight against the inner “manipulator.” This approach helps us achieve what I mentioned in the section about “physical preparations.”

I want to give another reason why I so blatantly address the worst-case scenarios. However, I should know that the facts I presented could unsettle or even frighten some people. First, information is always neutral. Our minds generate emotions from it, such as anger, joy, or fear. Even if we defuse things and explain them pleasingly, the subconscious of my counterpart suspects that I only want to calm him down. The unknown is then internally even blown up—made more significant than it already is—simply because it is unknown.

Traditionally, man always fears most what he does not know. In that context, what will it do to him if he feels that something is being withheld from him because it might frighten him? It will

¹ Fundamental understanding from the spirituality of Hermeticism and the unified quantum field theory, according to *Heim-Dröscher*, is that everything that originates from a singular consciousness. Everything is unity. The One plays a game with itself in a virtual construct (Maya/Matrix/Simulacrum), which creates the illusion of separation.

terrorize him on a mostly unconscious level. Thus, it won't help to constantly repeat that one should not be afraid. This approach is as practical as telling you not to think about a pink elephant. Well, what are you thinking about now? Exactly!

In summary, we should face the possible consequences described in the Phoenix Hypothesis. Only when we confront our fears can we grow beyond them and ourselves. We can also prepare ourselves on all levels and be more composed and focused when things get uncomfortable. Who remains in love and confidence when everything on the outside is falling apart? I would even postulate that a fundamental purpose of this matrix is to test us under stress on how we handle such scenarios.¹ We can only grow spiritually through the catalytic effect of an all-encompassing challenge. In any athletic discipline, we can never become better than the task or the quality of the opponent allows.²

There is no advantage in ignoring the established script for the process—quite the opposite. The game is tough enough, so we should pay attention to the information that can help us meet the challenge adequately. Finding the middle is necessary: discern from the heart but still use the mind. Being more in the now does not mean ignoring the future—or ignoring the lectures of the past. Finding a balance between the poles is the ultimate solution in all aspects of life. It opens us up to transcendent into a higher plane of existence or even prepares us for awakening—escaping from the matrix into singularity consciousness. Have courage—we will figure it out.

¹ Based on the fundamental insight from the “Hidden Hand” interview on Above Top Secret—a conspiracy internet forum. Link: <https://tinyurl.com/pzveupfv>

² Underchallenge leads to stagnation, overburden leads to frustration, but a healthy challenge from a potent antagonist leads to evolution or getting better at the discipline in question.

CHAPTER 7 | APPENDIX

7.1 Biography of Important Individuals

The Phoenix Hypothesis is not an independent theory but an alternative model based on various complex science fields. These branches of science are mostly highly controversial in their final interpretation. While the official paradigm often leaves many questions unanswered, pioneers have always propagated a new perspective—people who were ahead of their time. They are the key figures who inspired the current generation of alternative researchers. They did the groundwork. Unfortunately, a large number of these people are little known. Therefore, I want to give an overview of the most significant people who inspired the Phoenix Hypothesis.

It is important to note that I do not follow every theory or interpretation of these individuals. Instead, my thesis revolves around considering what these authors and researchers pointed out—the anomalies they stumbled upon. The seers and prophets are also to be questioned in this respect. Because they also interpreted their insights in many places, it is essential to separate the facts from the theories. Nevertheless, the following individuals have gathered excellent research and data that carry the core of my thesis.

7.1.1 Charles Hapgood

Charles Hapgood was an American scholar and author known for his groundbreaking work in the field of geology and the theory of

pole shift. His research and hypotheses have profoundly impacted our understanding of Earth's history and geologic processes. He was born in New York City on May 17, 1904, studied history at Harvard University and received his degree in 1928. Later, he taught history and geography at "Springfield College" in Massachusetts. *Hapgood* was a versatile scholar and dealt with topics such as anthropology,¹ archaeology, and geology.

The most significant work of *Charles Hapgood* is his theory on the Earth's crustal displacement. In his books, "The Earth's Shifting Crust" and "The Path of the Pole" (1970), he proposed that the pole shift may occur in the future and that the Earth's crust has shifted over time relative to the geographic north and south pole axes. *Hapgood* argued that this shift could explain catastrophic global events like the ice ages. He based his theory on paleontological evidence, including anomalies in the geologic record and the distribution of fossils. He also drew on historical maps and ancient lore to support his arguments. *Hapgood* proposed that the pole shift was caused by tectonic shifts in the Earth's crust, which in turn were driven by internal geologic processes.

Hapgood's theory on the pole shift was and is the subject of great controversy in scientific circles. Many geologists and geoscientists view his hypothesis skeptically and consider it speculative. Critics criticize, among other things, the lack of the necessary geological mechanisms that could explain such a process. Despite the objections, *Hapgood's* theory has found many adherents, especially among alternative thinkers and researchers.

¹ Anthropology (formed in the 16th century as anthropologia from ancient Greek ἄνθρωπος *ánthrōpos*, "human," and "-logy": „study of man, doctrine of man) is the science of man.

7.1.2 Chan Thomas

Dr. Chauncey Powers Thomas was an American author and engineer known for his theory of cataclysms. He was born in Missouri in 1920 and died in 1998. Although controversial and little known, his work reignited interest in alternative ideas of history and natural disasters after *Hapgood* laid the foundation for the Earth's mantle shift theory.

Unfortunately, there is limited information about the personal life of *Chan Thomas*. What is known is that he worked for McDonnell-Douglas with *Stan Friedman*, a well-known UFO researcher, and was later involved in guided missile development at the infamous "Bell Labs." *Thomas* was married and had several children. He is believed to have worked as a military intelligence analyst¹ in the 1950s. During this time, he developed his theory of cataclysms, which he later published in his book, "The Adam and Eve Story: The History of Cataclysms" (1963).

The central thesis of *Chan Thomas'* work is the idea that cataclysmic events periodically visited the planet in the past. These cataclysms were caused by sudden shifts in the Earth's crust—pole shifts—and violent natural disasters. *Thomas* argued that such events occur every 5,000 to 6,000 years and have repeatedly affected human history.

Thomas based his theory on various sources, including ancient lore, geological anomalies, and his interpretation of biblical texts. He claimed that evidence of past cataclysms could be found in the Earth's sedimentary layers, in geological records, and mythological lore. He also postulated that humanity had survived these

¹ *Chan Thomas* mentions numerous high-ranking officers of the various intelligence agencies of the U.S. government in his acknowledgments.

cataclysmic events and preserved a collective memory of these events in the form of Flood myths and other catastrophic stories.

As with many alternative views, *Chan Thomas'* theory of cataclysms has been met with criticism and controversy. The scientific community views his work skeptically, criticizing the lack of solid evidence and the lack of publication in established journals. However, some supporters of *Chan Thomas'* work have continued researching and defending his theory.

7.1.3 Immanuel Velikovsky

Immanuel Velikovsky was a Russian-American author and scholar known for his controversial theories on the global cataclysm. His work has sparked interest in alternative views of the origin and evolution of our planet. He was born in Vitebsk, Russia, on June 10, 1895, and studied medicine in Moscow. He later moved to the United States and continued his work as an author and scientist. *Velikovsky* published several books, including his best-known work, “*Worlds in Collision*,”¹ in which he presented his theories on the global cataclysm story.

Velikovsky postulated several theories on global cataclysm history in his works. One of his primary theories was that our solar system was characterized by cataclysmic encounters between planets in the past. He argued that these meetings led to widespread effects on Earth, including global catastrophes such as floods, volcanic eruptions, and Earthquakes. *Velikovsky* based his theories on a combination of historical records, mythological lore, and geological evidence. He drew parallels between various

¹ In 1950 *Velikovsky's* book “*Worlds in Collision*” was published, which presents a catastrophist view of events of the last 5,000 years. It was translated into numerous languages and is considered one of the standard works of catastrophism, even though his theories of possible triggers can be explained by the Nemesis system rather than a comet.

ancient cultures and argued that their legend told of similar global catastrophes. *Velikovsky* claimed that these events had been systematically ignored in Earth's history and that they could provide a deeper understanding of the evolution of our planet.

Like his colleagues *Hapgood* and *Thomas*, *Velikovsky's* theories are widely disputed by proponents of the uniformitarian principle. Among catastrophists, he is one of the most influential thought leaders of the modern era.

7.1.4 Alois Irlmaier

Alois Irlmaier was a German seer who became internationally known for his prophecies and predictions about future events. Primarily, however, his popularity extends across the German-speaking world. Therefore, he is considered the most crucial seer in Germany. His ability to provide seemingly accurate information about coming events has evoked both admiration and skepticism. *Irlmaier* was born on June 8, 1894, in Siegsdorf, Bavaria, and grew up in poor circumstances. At first, he worked as a well digger. Over time, however, he developed a remarkable ability for clairvoyance and began to make predictions about future events. *Irlmaier* gained attention for his detailed and accurate predictions, especially during and after World War II.

Alois Irlmaier became known for his numerous predictions about war, natural disasters, and political events. He is said to have given precise details about coming battles, political developments, and even personal fates. Many people consulted him and relied on his ability regarding missing persons. Numerous books and documentaries were published about his life and work.

7.1.5 Edgar Cayce

Edgar Cayce was an American mystic and seer known for his extraordinary abilities and prophecies. As the "Sleeping Prophet," he

gained worldwide fame for his predisposition to achieve meditative trance states and convey information about various subjects and future events. He was born on March 18, 1877, in Hopkinsville, Kentucky. From a young age, he showed a deep interest in spirituality, and it is reported that he had supernatural experiences at an early age. Throughout his life, *Cayce* developed the ability for deep hypnosis and became known for his accuracy in medical diagnoses and spiritual consultations. He founded the “Association for Research and Enlightenment”¹ to continue his work and to spread knowledge about spirituality and healing.

Edgar Cayce became famous for his prophecies about future events and his ability to provide information about past lives and spiritual issues. While in a trance state, he could answer questions on almost any subject. His predictions covered health, economics, world events, and personal developments. Some of *Cayce’s* most notable predictions included the expectation of a coming world war, the discovery of hidden archaeological sites, such as the find at the Dead Sea, and the possibility of an advanced civilization in ancient Atlantis. Many people sought out *Cayce* for advice and insight into their own lives based on his prophecies and for spiritual consultation.

Edgar Cayce gained worldwide recognition and a reputation as an extraordinary seer. His work inspired thousands of people to explore spirituality and metaphysical subjects. The information he conveyed influenced the thinking of many people and led to an increased interest in alternative healing methods, meditation, and spiritual development. Although *Cayce* is considered by some to be an authentic prophet, some skeptics doubt his abilities. They argue that many of his predictions are vague and open to inter-

¹ The Association for Research and Enlightenment (A.R.E.), also known as *Edgar Cayce’s* A.R.E., is a nonprofit organization founded in 1931 by psychic *Edgar Cayce* to research spirituality, holistic health, and other psychic topics, as well as to preserve historical resources, including *Cayce’s* psychic readings.

pretation. *Edgar Cayce* remains a fascinating figure who has attracted international attention.

7.1.6 Zecharia Sitchin

Zecharia Sitchin was a Russian-American author and researcher known for his theories about the presence of extraterrestrial civilizations on Earth. His work sparked interest in pre-astronautics, the idea of ancient extraterrestrials influencing human evolution. He was born in Baku, Azerbaijan, on July 11, 1920, and grew up in Palestine. He later moved to the United States. *Sitchin* studied economics and worked as a journalist and publisher before becoming deeply involved in ancient texts and mythologies. He published several books, including his best-known work, “The Twelfth Planet,” in which he presented his theories about the presence of extraterrestrial beings on Earth.

Sitchin claimed that the ancient Sumerian texts, particularly the cuneiform tablets, would provide evidence of the existence of an advanced extraterrestrial race that had previously visited Earth and influenced human evolution. He interpreted the Sumerian texts as accounts of the creation of humanity by these extraterrestrial beings, whom he called “Anunnaki.” *Sitchin* argued that the Anunnaki came to Earth for gold and genetically engineered society to help them with mining operations. He interpreted the Sumerian texts as evidence of advanced technologies, spaceships, and complex alien civilizations. Furthermore, he claims that the Anunnaki were worshipped as gods in Sumerian mythology.

Even though his interpretations are partly very controversial and *Sitchin* made mistakes in dating, some of which were adopted by later generations of researchers, he drew much attention to the Sumerian cuneiform writings. The content of these ancient writings, which made *Sitchin* famous, also plays into the Phoenix Hypothesis.

7.1.7 Carlos Muñoz Ferrada

Carlos Muñoz Ferrada was a Chilean researcher and seer known for his extraordinary predictions in the field of astronomy. He gained recognition and attention in the scientific community through his intensive observation of the sky and the application of a unique method for predicting natural catastrophes. *Ferrada* was born in Spain in 1909 and died on October 17, 2001, in Villa Alemana, Chile, where he had his residence and observatory.

From 1926 to 1929, *Ferrada* studied at the nautical school for pilots of the Chilean Navy. In 1956, he received the title of first pilot of the Chilean Merchant Navy. In 1970 he became a member and professor of the College of Captains and Pilots of the Merchant Navy. He studied meteorology and astronomy at the University of Chile. Later, he also learned engineering and physics at the Chilean Railways.

Ferrada specialized in the Astronomical Society of Paris. He was a leading member of the Astronomical Society of Gijón and that of Milan and was director of the Astronomical Observatory of Panama for five years. He developed an extraordinary passion for astronomy and natural phenomena. During his life, he gathered extensive knowledge about celestial bodies and their effects on the Earth. Primarily, he became known for his ability to predict impending natural disasters—especially Earthquakes.¹

Carlos Muñoz Ferrada gained attention when he made several significant astronomical predictions. These included geological

1 *Muñoz Ferrada* became known in his country when, in December 1938, at the age of 29, he surprised the public at a conference in the city of Concepción with the announcement of an earthquake that would occur at 11:25 p.m. on January 24, 1939, in the city of Chillán, Chile. This earthquake claimed 30,000 lives shortly after that.

associated with celestial phenomena, such as Earthquakes. He claimed that comet “Halley” would pose a threat to Earth in 1910, which turned out to be true when the object passed near Earth. He also made predictions about Earthquakes and volcanic eruptions based on his observations of planetary constellations and solar activity. One of his most famous predictions was the announcement of the severe Tangshan quake in China in 1976¹ that killed an estimated 242,000 people. *Muñoz Ferrada* had predicted the Earthquake months earlier based on his astronomical observations. Although he was not officially recognized due to the political situation in China, his prediction gained international attention.

Despite much controversy, there was also recognition for *Carlos Muñoz Ferrada*. Some of his prophecies were confirmed as remarkably accurate, and he received praise from people who supported his work. Some argued that his unconventional approach and observations offered a new perspective on the relationship between celestial bodies and natural phenomena. In the last years of his life, *Ferrada* was depressed by his findings regarding Planet X, Nibiru, and the Nemesis system, respectively, which he saw as triggering a future geophysical transformation. This feeling became evident in his last public interview, which was shown on Chilean television.²

1 The Tangshan earthquake (Chinese 唐山大地震, pinyin Tángshān dàdìzhèn) on July 28th, 1976, in Hebei Province, was the most devastating earthquake of the 20th century, with estimates of up to 242,000 deaths, and the second most catastrophic earthquake in human history (after the 1556 Shaanxi earthquake).

2 The interview was published on Channel 4 of Puerto Rico Television on June 28, 1999. It was subsequently broadcast in Venezuela as part of a documentary by producer *Joseph Landon*, director of “Joseph Landon Enterprise.” *Hercolubus 2: El Exodos*; Link IMDB: <https://www.imdb.com/title/tt7975122/>

7.2 Associated Concepts

In this appendix, I would like to illuminate a few scientific concepts whose understanding is helpful to understand isolated arguments in the Phoenix hypothesis better. Since I have already, in this book, let the genie of simulation theory or the idea of reality as a virtual construct out of the bottle, I want to explain two essential concepts that support such a view. For this purpose, I want to introduce the idea of wave-particle dualism with Wheeler’s double-slit experiment. Furthermore, the principle of “nonlocality” has to be explained.

I often spoke about the anomalies of the old advanced civilizations within my hypothesis. However, since this is an incredibly far-reaching, complex topic, I could only deal superficially with it. It was a matter for me not to distract too much from my core thesis when I opened this bottomless pit. Basically, the idea is to point out that civilizations that had achieved extremely advanced technological evolution before they disappeared from history—suddenly. This fact strongly suggests a cataclysmic event.

Numerous authors and researchers have published their theories about these highly developed civilizations. Nowadays, *Graham Hancock* gathers the most attention with his Netflix series. Like many of his predecessors, he recognizes the enormous cultural and technical advances of diverse ancient peoples, evident in countless artifacts and ruins. Sometimes these ancient civilizations must have had even more extensive knowledge than our generation today, which feels like the tip of the creation.

In this regard, I would like to discuss two authors who have significantly influenced research in this regard: *Erich von Däniken* and *David Hatcher Childress*. They are also famous representatives of the thesis of extraterrestrial teachers. This point of view can

also be converted to the concept of a “breakaway civilization”—in the sense that the master teachers were survivors of a previously advanced society who could preserve their technical and cultural achievements. But let us first start with the physical concepts.

7.2.1 Wheelers Double-Slit Experiment

The delayed choice experiment, proposed by physicist *John Archibald Wheeler*,¹ is a thought experiment that challenges our understanding of the nature of reality and the role of observation in quantum mechanics. It aims to investigate the wave-particle duality of light and the concept of retrocausality.

In *Wheeler’s* version of the experiment, a stream of individual particles, such as photons, is directed toward a barrier with two closely spaced slits. Behind the barrier, there are two detectors positioned to measure the particles’ behavior.

Step-by-step explanation of the delayed choice experiment:

- First, when the particles pass through the slits, they exhibit wave-like behavior, creating an interference pattern on a screen placed behind the barrier. This pattern suggests that the particles simultaneously pass through both slits and interfere with each other.
- However, Wheeler introduced a twist by placing a device after the slits, called a quantum eraser, which can change the particles’ behavior. This device allows researchers to “delay” the choice of whether to determine which slit a particle goes through or to erase that information altogether.
- When the information about which slit a particle goes through is available (not erased), the interference pattern on the screen

¹ *John Archibald Wheeler* (July 9, 1911 – April 13, 2008) was an American theoretical physicist. He was largely responsible for reviving interest in general relativity in the United States after World War II. Wheeler also worked with *Niels Bohr* and was a student of *Albert Einstein*.

disappears. The particles behave as individual particles and create a pattern of two distinct bands corresponding to the two slits.

- On the other hand, when the information about the particles' paths is erased, either by not observing it or by using the quantum eraser device, the interference pattern reappears. The particles behave as waves and create an interference pattern on the screen, even though they have the potential to act as individual particles.

The intriguing aspect of the delayed choice experiment is that the choice of whether to observe or erase the information about the particles' paths can be made after the particles have already passed through the slits but before they reach the detectors. This suggests that the act of observation or the knowledge of the experimental setup affects the behavior of particles retroactively.

The experiment raises profound questions about the nature of reality, the role of consciousness, and the fundamental principles of quantum mechanics. It challenges our intuitions about causality and suggests that the act of observation or measurement can have a retroactive effect on the behavior of particles, blurring the line between past and future events.

It is worth noting that the delayed choice experiment is a thought experiment, and implementing it in a real laboratory setting requires sophisticated experimental setups and quantum systems. Nonetheless, it serves as a powerful tool for exploring the intricacies of quantum mechanics and the philosophical implications of our understanding of the physical world.

7.2.2 The Concept of Non-Locality

Non-locality is a fundamental concept in quantum physics that challenges our intuitive understanding of space and time. It refers to a phenomenon where particles can be instantaneously connected or "entangled" regardless of the distance between them, allowing for correlations and interactions that defy classical concepts of locality and causality. At the heart of non-locality is

the principle of quantum entanglement. When two or more particles interact in a way that their quantum states become correlated, they become entangled. This means that the properties of one particle are instantaneously linked to the properties of another, regardless of the spatial separation between them. This connection persists even if the entangled particles are far apart, even on opposite ends of the universe.

The implications of non-locality were famously explored in the thought experiment known as the *Einstein-Podolsky-Rosen* (EPR) paradox. In this experiment, two entangled particles are created and then separated. According to quantum theory, measuring a property of one particle will instantaneously determine the corresponding property of the other, even if they are light-years apart. This seemingly contradicts the principles of local realism, which suggest that physical processes are governed by local causes and that information cannot travel faster than the speed of light. The phenomenon of non-locality has been experimentally verified through various tests, such as the *Bell* inequality experiments. These experiments involve measuring the correlation between entangled particles along different measurement axes. The results consistently violate the *Bell* inequalities, which are constraints that would hold if local realism were true. This provides strong evidence in support of the non-local nature of quantum systems.

The concept of non-locality has profound implications for our understanding of the nature of reality. It suggests that there are hidden connections between particles that transcend traditional notions of space and time. It also raises questions about the nature of information transfer and the fundamental structure of the universe. Non-locality is not limited to particles alone but also applies to quantum systems at larger scales. For example, in quantum teleportation, the quantum state of a particle can be transferred to another distant particle instantaneously, without physically traversing the space between them. This process relies on the principles of non-locality and entanglement. Despite ist

success in describing and predicting quantum phenomena, non-locality remains a subject of ongoing research and debate. It challenges our intuitions about how the world works and has profound implications for the development of future technologies, such as quantum communication and quantum computing.

In summary, non-locality in quantum physics refers to the phenomenon where entangled particles exhibit instantaneous correlations regardless of their spatial separation. It challenges classical notions of locality and causality and has been experimentally verified. Non-locality has deep implications for our understanding of the nature of reality and has the potential to revolutionize various fields, including communication and computing.

7.2.3 Ancient Astronauts or Breakaway Civilizations

David Hatcher Childress and *Erich von Däniken* share a common thesis related to ancient civilizations and extraterrestrial influence or intervention in human history. Both authors propose ideas that challenge mainstream archaeological and historical narratives.

David Hatcher Childress, an American author and researcher, is known for his work on alternative history and ancient civilizations. He has written extensively about various topics, including ancient technology, lost cities, and unexplained archaeological phenomena. *Childress* suggests that many ancient civilizations possessed advanced knowledge and technologies that surpass our current understanding. He explores the possibility that these civilizations received assistance or inspiration from extraterrestrial beings or advanced ancient cultures.

Erich von Däniken, a Swiss author, is widely recognized for his book “Chariots of the Gods?” published in 1968. *Von Däniken* argues that ancient civilizations encountered and interacted with

extraterrestrial beings or highly advanced ancient astronauts. He interprets ancient artifacts, myths, and religious texts from different cultures as potential evidence of extraterrestrial visitations and influences in human history. *Von Däniken* proposes that ancient religious texts, such as the Bible, contain references to extraterrestrial encounters and technologies.

While their specific theories and interpretations may differ, both *Childress* and *von Däniken* suggest that ancient civilizations had contact with advanced beings or technologies beyond our understanding. They explore the possibility that ancient monuments, artifacts, and religious texts hold clues indicating extraterrestrial presence or influence throughout human history. These ideas have sparked debates and discussions within the field of alternative archaeology and alternative history, challenging conventional views of the past.

From a “breakaway civilization” perspective, *David Hatcher Childress* and *Erich von Däniken* propose ideas that align with the concept of an advanced ancient civilization or a breakaway civilization that existed in the distant past. This perspective suggests that there may have been highly advanced societies or groups of individuals in ancient times who possessed technologies, knowledge, and capabilities far beyond what is commonly acknowledged. The “breakaway civilization” concept postulates that these advanced civilizations might have deliberately hidden or separated themselves from mainstream human society, either due to cataclysmic events, a desire for secrecy, or a result of extraterrestrial interactions. According to this viewpoint, these progressive groups may have had access to sophisticated technologies and scientific knowledge that allowed them to accomplish feats that seemed extraordinary or even impossible by conventional standards.

David Hatcher Childress explores the possibility that ancient civilizations, such as the Egyptians, Incas, or ancient Indian cul-

tures, achieved remarkable engineering feats that remain unexplained today. He suggests that these civilizations might have inherited or acquired advanced technologies from a breakaway civilization, extraterrestrial beings, or ancient lost civilizations, which enabled them to construct megalithic structures, develop sophisticated knowledge in various fields, and accomplish extraordinary accomplishments.

Erich von Däniken's perspective aligns with the idea of an ancient breakaway civilization or ancient astronauts. He argues that evidence found in ancient texts, religious scriptures, and archaeological remains points to the existence of highly advanced beings or civilizations that visited Earth in the past. *Von Däniken* suggests that these ancient astronauts may have imparted knowledge and influenced the development of human societies, leading to the construction of monumental structures, advanced astronomical knowledge, and cultural and religious practices.

David Hatcher Childress and *Erich von Däniken* present various arguments to support the existence of highly advanced civilizations in ancient times. While their specific arguments may differ, here are some main points they commonly make:

- **Advanced Technological Achievements:** *Childress* and *von Däniken* argue that the construction of ancient megalithic structures, such as the pyramids of Egypt or the stone monuments of South America, required a level of engineering expertise and technological capabilities that surpassed what was thought possible at the time. They suggest that conventional explanations for these structures, such as primitive tools and techniques, are insufficient and propose that advanced technologies and knowledge were involved.
- **Unexplained Ancient Artifacts:** Both authors highlight the existence of ancient artifacts that exhibit characteristics or features that defy conventional explanations. These artifacts include intricate and precise objects, such as ancient batteries, advanced mechanical devices, or artifacts depicting advanced technologies that seem out of place in the context of the civilization that created

them. They argue that such artifacts indicate the presence of advanced knowledge and technological capabilities in the past.

- **Astronomical and Mathematical Knowledge:** *Childress* and *von Däniken* point to the accurate astronomical alignments found in ancient structures and the sophisticated mathematical understanding displayed by ancient civilizations as evidence of advanced knowledge. They suggest that the precise alignment of megalithic structures with celestial events or the incorporation of complex mathematical principles in architectural designs indicate a level of scientific understanding that goes beyond what was traditionally attributed to those societies.
- **Cross-Cultural Similarities and Ancient Texts:** The authors draw attention to similarities and parallels found in ancient myths, religious texts, and folklore from various cultures around the world. They argue that these shared elements, such as stories of gods, divine beings, and advanced technologies, indicate a common source of influence or contact with an advanced civilization or extraterrestrial beings. They propose that ancient texts and oral traditions may contain encoded accounts of encounters with technologically advanced entities.
- **Anomalies and Unexplained Phenomena:** *Childress* and *von Däniken* emphasize the existence of unexplained phenomena and mysteries in archaeology and history that defy conventional explanations. These anomalies include inexplicable feats of construction, ancient maps showing advanced geographical knowledge, accounts of ancient flight or space travel, and other enigmatic artifacts or events that challenge mainstream interpretations.

Here are a few examples:

- **The Great Pyramids of Egypt:** The construction of the pyramids at Giza, particularly the Great Pyramid, is considered a remarkable engineering feat. *Childress* and *von Däniken* argue that the precision in the pyramid's construction, the alignment with cardinal directions, and the massive size of the stones used raise questions about the tools and techniques available to the ancient Egyptians. They propose that advanced technologies or assistance from a more advanced civilization were involved.

- **Puma Punku in Bolivia:** Puma Punku is an archaeological site in Bolivia that features complex stonework with precision-cut, interlocking blocks weighing several tons. *Childress* and *von Däniken* suggest that the intricacy and precision of the stonework at Puma Punku defy the capabilities of the ancient civilization associated with it. They propose that advanced machining or construction techniques must have been utilized.
- **The Nazca Lines in Peru:** The Nazca Lines are large geoglyphs etched into the desert floor in Peru. *Childress* and *von Däniken* argue that the scale and complexity of these designs, some of which are only visible from the air, indicate a level of aerial technology and knowledge that would have been beyond the capabilities of the Nazca people. They propose that the Nazca Lines may have served as markings or signals for extraterrestrial visitors.
- **Ancient Artifacts:** Various ancient artifacts have been cited as evidence of advanced knowledge and technology. Examples include the Antikythera Mechanism, a device from ancient Greece that demonstrates a sophisticated understanding of gears and complex calculations, and the Baghdad Battery, an object from ancient Mesopotamia that resembles a primitive battery. *Childress* and *von Däniken* argue that these artifacts suggest the existence of advanced technology in ancient times.
- **Ancient Astronomical Alignments:** Numerous ancient structures, such as Stonehenge in England and the Temple of Karnak in Egypt, exhibit precise astronomical alignments. *Childress* and *von Däniken* contend that the accuracy of these alignments indicates advanced astronomical knowledge and suggests that ancient civilizations had access to advanced tools or guidance from a more advanced civilization.
- **Ancient Texts and Myths:** *Childress* and *von Däniken* draw attention to ancient texts and myths from various cultures that contain references to gods, divine beings, advanced technologies, and encounters with otherworldly entities. They argue that these shared themes across different cultures indicate a common source of influence or contact with a highly advanced civilization or extraterrestrial beings.

7.3 Lyrics 20—20 Vision

The turning point was in the year 2020,
a few had plenty, but as for the many,
they weren't tasting any fruits of their labor,
there had been prophesied a coming of a savior.
20 years prior by the Roman Catholic calendar,
they must have calculated with the wrong algebra,
most of the meek were devastated roman scavengers,
nuclear war had turned the blue sky to lavender.

I happened to come across an artefact,
that was known to give the unjust heart attacks,
matter fact it had been expressly forbidden,
to the righteous it contained a prescription.
An ante dote to cure the current condition,
I dug it up but had to keep the drug hidden,
from the police who patrolled with squadrons,
the formers cities which were now called quadrants.

You see the war wasn't fought between the nations,
but by the multi national corporations,
against a populace with whom they lost patience,
and so they planned out the mass annihilation
of all labourers who due to technology,
had become useless in this new age society.

At the same time they wiped out piety,
and replaced it with a corporate psychology,
all governance was done by the businesses,
instead of wages you merely earned benefits,
the right to shelter, water, and oxygen,
plus the corporate condoned intoxicants,
pacifying people through addiction,
I saw it clearly with the 20-20 vision.

The world was controlled by 5 key entities,
run by one person of an unknown identity,
Bill Gates had long since been assassinated,
by the fellow devils with whom he collaborated.

IBM, Netscape and Microsoft,
were now one squad that was macro hard.

In 2009 they created a computer,
that didn't require an end user,
Rupert Murdoch, Time and Sony,
combined forces to form the one and only,
corporation that controlled information,
shaped ideas and assimilation.

The third company had gained it's wealth,
in the field of all personal and public health,
the human genes had been patented and sold,
so now you paid loot just to cure your own cold,
and by 2010 we all would owe,
our food, clothing and shelter to *F.C.S. Cole*.

The global military and local police,
formed a fifth company and they unleashed,
a war on the poor which of course we lost,
2012 rocked the nuclear holocaust,
and people who had once been blind of fact,
now tried to turn the clock back because the lacked:

***20-20 vision it aint about the year,
20-20 it's all about seeing things clear,
20-20 you can do that right here and right now,
take your sacred vow.***

The 2020 vision is one of pure chaos,
in which man has drifted way off course,
but think back to the premier verse,
and the artefact that was unEarthed,

It bore names like *Mohammed, Noah* and *Abraham*,
in ancient times it had enabled them,
to deal with the gravest of oppression,
that's why the rulers of our day were suppressant,
constant in the belief in one God
full knowing it would lead to Jihad,
and know since the knowledge had all been obliterated,
and man made sex had been terminated.

We could resurrect the belief,
in it's purest form with no west or east,
so we set out about our mission,
to pave the way for the prophetic vision,
but should we fail there would be no peace,
in the reign of the beast,
would never cease.

7.4 About the Author

Christian Köhlert is a media artist, author, and practitioner of Creative Homeopathy. He obtained a degree in industrial design in 2005—specializing in interface layout. Before he even acquired his degree, he began producing documentaries and started to explore alternative perspectives on life. In 2008, he became the editor-in-chief of Secret TV, the first commercial online channel dedicated to „conspiracy theories“ and special content. During his tenure, he produced the film “(R)evolution 2012” with *Dieter Broers* and

Christoph Lehmann, and produced numerous programs and documentaries that continue to shape his worldview.

Christian's involvement in alternative media led to a wide network within the international scene. Despite gradually distancing himself from the field due to disillusionment and personal reasons, he remained an attentive observer of global events. In 2014, he embarked on a journey as a “perpetual traveler,” aiming to disconnect from the System. He explored countries such as New Zealand, Switzerland, Canada, Mexico, and the USA while dedicating most of his time to studying spiritual concepts and holistic medicine, including Creative Homeopathy.

Living a minimalist lifestyle in an off-road camper on Mexican beaches, *Christian* sustained himself through website design, graphic projects, and DJing. His fascination with understanding the inner workings of the world and the intentions of the collective remained strong, even as he felt increasingly detached from the society in which he grew up.

In early 2020, global events prompted *Christian* to re-engage with alternative media. Invited by long-time companion *Robert Stein*, he shared his perspective on the Mexican lockdown on the show “Homeoffice.” Subsequently, he resumed writing articles and developed a hypothesis explaining the drastic restructuring of the world order. This process extended until 2022, during which *Christian* experienced the indirect effects of global upheavals while residing in Baja, Mexico.

Recognizing a transformative process affecting humanity, *Christian's* distance from the System and the freedom it afforded him allowed for deep reflection on recent events. Inspired by 20 years of research, he decided to return to Europe, primarily residing in Switzerland. In late 2022, he authored an article for Nexus Magazine titled “The Phoenix Hypothesis,” despite being aware

that his research findings diverged from prevailing alternative views.

Christian's driving motivation is to provide options for individuals seeking comprehensive answers. The extent to which individuals engage with the associated topics and incorporate them into their worldview is a matter of personal choice. While his Phoenix Hypothesis aligns with certain international perspectives, it introduces lesser-discussed points within the German alternative media spectrum. Surprisingly, the Phoenix Hypothesis was much appreciated within the alternative spectrum and was received as a fresh new perspective that is worth to be discussed. The Osiris Verlag, a German publisher, approached *Christian* with the request to write a book about his point of view. This is his English translation of this material.

If his thesis resonates, *Christian* is prepared to give lectures and interviews on related subjects. His website serves as a starting point, featuring articles, source collections, and upcoming podcasts in collaboration with Nexus Magazine.

The Phoenix Hypothesis is open to challenge, and *Christian* welcomes dialogue and open discussions, inviting readers to utilize the comment function within the article to ask questions. He also offers additional information and articles on his website (www.mayamagik.com) and seeks open discourse with interested parties on the associated Telegram channel. *Christian* welcomes dialogue and open discussions on the hypothesis and invites his readers to use these channels to jointly advance research and develop solutions.

7.5 Highest Praise

Without the unconditional support of my family—my choice, and my biological family—I could never have written this book. Therefore, my deepest gratitude goes to these people. Further, the Phoenix Hypothesis could not have taken off without the help of the following persons: *Robert Stein*, the whole NuoFlix team, *Oliver* and his Regentreff team, *Daniel Wagner* and my foster father in the alternative media scene: *Thomas Kirschner*.

Furthermore, my thanks go to the following people who have accompanied, motivated, inspired and “endured” me on my way—it is not necessarily easy to be friends with a person who regularly talks about “Pole Shifts” and a global conspiracy.

Greetings and appreciation to: *Antonie Pepler, Inna Kralovyretts, Thomas Kirner, Barbara Hochreiter, Horst Thuy, Prof. Ernst Senkowki, Dieter Broers, Anabell & Stefan Wesendorf, Antje & Malte Mohrdieck, Jens Bach, Christoph Lehmann, Illobrand von Ludwig, Jan van Helsing, Dan Eden, Baljit Singh, John Dubba, Rafael Gutierrez Rubio, Dane & Sabrina, Bruce Jessop, Christopher Martin, Christian Stolze, Michael Robra, Mathieu Richard, Daniel Bender, Akahass Canuchi, Marcus Robbin, Claudia Pommer, Mitch Scott, Jens Zygarr, Ben Wolfe, Alex Saltman, Michael Horner, Kai Eisentraut, Mathias Miehe, Nicole & Marco Hühn, Bill Ryan, Cailin Callahan, Thomas Kolditz, Rollando Frasa, Liza Anisov, Sören Hartwig, Napoleon Domingues, Nadeshda Brennicke, Jorge Adame, Sam Frangiamore, Max Dukic, Lee Lundsford, Goetz Wittneben, Peter Herrmann, Mario Generlich, Laurin Eidam, Ruth Huber, Bill Ryan, Marcus Schmiede, Lars Knobbe, Ken Boogers, Bretto Horton, Ralf Flierl, Andreas Rau, Eric Gandle, Pablo Bonilla, Maik Burkard, Robert Bunoan, Zach Balle, Michael Köppen, Michael König, Francine Blake, Giuliana Conforto, Jenna Welch, Kai Brenner, Tim Gustafson und Tom Edon.*

The summary of *Ben Davidson*'s work in chapter 5.4 is based on an article by *Dr. Michael Salla* on Exopolitics (<https://tinyurl.com/535c7urx>). Although I altered most of it and added my own comments, the general concept is by *Dr. Salla*.
